Disclaimer: All systems are photographed with optional extras, which some computer retailers won't even recognize.

Technically speaking, the System 325 is the most advanced 386™ computer we've ever built. And, according to PC Magazine, it's one of the most advanced 386 computers they've ever tested.

In benchmark after benchmark, the Dell System 325 25 MHz ran circles around a field

A PERSONAL COMPUTER THAT'S REALLY PERSONAL.

Of the more than 150,000 personal computers we've sold to date, each one's been individually configured to fit the needs of its owner.

The System 325 takes that idea

to its logical extreme.

For example, it runs either MS-DOS®, OS/2, or our own Dell UNIX® System V. Which is compatible with AT&T's System V Interface Definition. And the world of XENIX® applications.

If speed is of the essence, we can include an optional Intel®

**THE DELL 386 SYSTEM 325
HAS A 25 MHz CLOCK RATE,
CACHE MEMORY CONTROLLER,
100 MB 25ms IDE DRIVE,
PAGE MODE INTERLEAVED MEMORY,
AND 100% COMPATIBILITY WITH
MS-DOS, OS/2 AND UNIX SYSTEM V.**

of 386-based systems. A field that included the Compaq® 386/25.

A show of prowess that earned the System 325 PC Magazine's Editor's Choice award.

It was a goal we set for ourselves from the very beginning. And an objective anyone with a penchant for power and performance can appreciate.

80387 or WEITEK 3167 math coprocessor. And since nothing about this system is lightweight, the standard mass storage is a 100 MB IDE disk drive. Or we can configure it with a 150 or 322 MB unit.

As you might expect, the output is just as intense. You can choose between VGA mono with paperwhite screen, or VGA Color

Plus, for high resolution colors displayed on a larger screen.

Even though the 325 gives you all this performance, it still leaves you six open slots for whatever else you might want to add.

And once you've told us what you want, we'll make sure what you want works—by burning-in the entire system unit.

COMPUTER RETAILERS ARE NO KNOWS.

In all probability, the average computer retailer won't have any understanding what makes the System 325 go.

He will, however, be quite aware of the fact that he could add a 35% markup if he could sell it in his store.

Which he can't.

Because we sell direct.

Meaning you now have the unique opportunity to talk directly with a computer expert. And ask things like, "What's the difference between IDE and ESDI?" Or, "How much SIMM RAM should I add?"

In other words, the kinds of questions you should be able to ask a retailer, but usually can't.

So as you might suspect, dealing direct not only saves you the 35% markup, but 100% of the aggravation.

WE COME WHEN WE'RE CALLED.

One of the things that very clearly sets a Dell system apart

from other computers is not just how they're sold, but how they're supported.

Overkill was one description used in a PC Week article.

Perhaps.

But then, we think you'll agree, when something goes wrong, you want as much help as

we'll refund your money.

No questions asked.

MAYBE YOU SHOULDN'T BUY ONE AFTER ALL.

No matter how many reasons we give you to buy a Dell system, sometimes it makes more sense to lease one instead.

BEST OF ALL, YOU WON'T HAVE TO EXPLAIN TO A COMPUTER RETAILER WHAT ALL THAT MEANS.

possible, right?

Which is why every Dell system comes with a toll-free technical support line and self-diagnostic software. We're able to solve 90% of all problems right over the phone. The other 10% receive next-day, desk-side service. Thanks to our new alliance with Xerox Corporation.

And you get all this help for a full year—whenever you need it—at no extra charge.△

As you've probably guessed, one of the things that drives us most is customer satisfaction.

So we'd like to give you the ultimate guarantee: Try a System 325 in your office for a month. Run your toughest applications. Put it through its paces, at your pace. If you're not completely satisfied, send it back anytime within 30 days. And

Whether you need a single computer, or an office full, a leasing plan is like 100% financing.

And just as we can custom configure your computers, we can see to it you get a custom designed lease plan to fit your exact business needs.† A fact that has not gone unnoticed. Especially by the Fortune 500. Over half of whom now own or lease Dell systems.

And just as we welcome their business, we welcome your business, too. Just call us, toll-free. And don't be afraid to ask us the tough questions.

That's the part we like best.

Easel makes it easy to migrate applications from hosts to programmable workstations.

Easel® for OS/2 Extended Edition is a full-featured development tool for creating programmable workstation-based graphical interfaces that can communicate with existing host 3270 applications. This lets you develop workstation applications without having to change host applications. It provides high-level language support (and WYSIWYG graphics) for developing EE applications that support Presentation Manager™ and Communications Manager. For more information contact your IBM representative.

DeScribe gives OS/2 users WYSIWYG word processor.

DeScribe™ conquers the gap between word processing and desktop publishing. DeScribe gives you advanced word processing combined with style sheets, flexible page layout and typographic controls. Since it runs under Presentation Manager, you benefit from the multi-tasking, multi-windowing environment. The WYSIWYG mouse-and-menu interface makes it easy to create professional quality documents. For additional information on DeScribe, call Lennane Advanced Products at 1 916 646-1111.

Lotus 1-2-3 Release 3 delivers advanced spreadsheet power to OS/2 users.

1-2-3® Release 3 delivers a new dimension of power and performance to OS/2 users. Release 3 integrates true 3D worksheets, powerful data base capabilities and high-impact business graphics. Of course, it's fully compatible with your existing 1-2-3 data and macros. Release 3 supports leading OS/2 networks and PostScript® output devices. For more information, see the Lotus® Authorized Reseller nearest you.

Maximize semiconductor manufacturing process with AIM—Advanced Interface for Micalign®.

As part of Perkin-Elmer's commitment to provide the semiconductor industry with ways to improve productivity, they've developed an OS/2 version of Advanced Interface for Micalign (AIM™). This integrated system interfaces with the Perkin-Elmer Micalign 500/600 HT series and utilizes OS/2's advanced multitasking capabilities to monitor 50,000 processes for maximized machine utilization. AIM reduces the time semiconductor manufacturers spend on system setup and diagnostics, and it enables flexible storage and real-time information retrieval.

For more information on how AIM can help dramatically improve your productivity, call Perkin-Elmer at 1 203 834-4725.

Free OS/2 Application Guide available.

You can receive a 340-page OS/2 Application Guide that lists and describes over 800 identified applications for OS/2. For a free copy of this guide call 1 800 IBM-2468, ext. 120.

They Cover the Software Front

PC World's 1989 software all-stars: Mike Goodwin, Eric Brown, Scott Spanbauer, Anita Amirrezvani, Wes Nihei

This month you won't find our usual mix of features, productivity-boosting how-to articles, and hardware and software reviews. But that's not an apology—far from it. For the third straight year, our July software-only issue brings together more than 30 products in a half-dozen groundbreaking categories.

The editors pictured above are responsible for the six roundups that make up our 1989 Annual Software Review. And although the six reviews represent dramatically different application areas, one message runs through them all: Strong competition makes for good software.

Assistant Editor Wes Nihei coordinated our lead review, "Advanced Word Processors—Familiar Faces, New Features." *WordPerfect* and *Microsoft Word*, our Best Buy honorees, have set a high standard for topflight word processors.

Anyone who thinks the paperless office is just around the corner hasn't spent much time lately in the typical office. Fortunately, forms-creation software takes the drudgery out of dealing with the ubiquitous business form. Associate Editor Mike Goodwin ("The Best in Forms Software") found proof that you don't need desktop publishing to polish your everyday business documents.

Data base guru Tony Lima prepared "Data Base Powerhouses Strike a Balance" under the

supervision of Associate Editor Eric Brown. *Paradox* and *dBASE IV* are the clear leaders in their category, thanks to a winning blend of developer-strength programming muscle and user-friendly front ends. With *dBASE IV* in particular, Ashton-Tate has succeeded in setting a standard for other data management software to surpass.

If your business lives and breathes by its financials, don't miss "Net Gains in Multiuser Accounting." Senior Associate Editor Anita Amirrezvani and reviewer Ralph Soucie assembled the comprehensive Features Evaluation at the heart of that review. The most impressive network payoff, though, may come from a new category of application software. Eric Brown—who had a busy month—collaborated with reviewers Paul Christiansen, Steve King, and Mark Munger on "Groupware: E-Mail Meets Scheduling." With powerful messaging, calendaring, and project management features, these products can turn a network's physical links into strong personal connections.

Finally, who says you can't create sharp, forceful images on the PC? Assistant Editor Scott Spanbauer ("Well-Rounded Drawing") found five object-based drawing packages that promise a new era of graphics sophistication for PC users. ●

Hatfield.

McCoy.

We had these two talking in no time at all.

Seems like every time these two boys set down together, they commenced to fightin'. If one said day, the other night. Good thing the folks at TOPS settled this feud once and for all.

It's so dang simple, too. Just install TOPS software in each Macintosh and PC in the place. Throw in a network card for each PC. Add a little twisted-pair telephone wire, and suddenly they're behaving like family.

TOPS Tech Specs

- One copy of TOPS software required for each network station.
- TOPS supports AppleTalk and FlashTalk running on twisted-pair cabling (telephone wire), and EtherTalk on thick or thin Ethernet cabling.
- IBM PCs, PS/2 Models 25 or 30, or compatibles require TOPS FlashCard, 3Com EtherLink II or other network card. PS/2 Models 50 through 80, or compatibles require 3Com EtherLink/MC card or equivalent.
- TOPS can be configured as a distributed, dedicated, or combination network.

Next thing you know, they're swapping files, sharing peripherals, and trading data from Lotus 1-2-3 to Excel, dBase III to dBase Mac, and most other PC and Mac applications. Or tapping into whole other networks and systems, such as Novell, AppleShare, Sun, and VAX.

What's more, no central file server is needed—though TOPS can easily accommodate one as a business grows. And no special training is required. No wonder TOPS is the standard for easy-to-use PC to Mac connectivity.

Maybe that's why folks say, when it comes to making connections, TOPS is the real McCoy. Call the TOPS Division of Sun Microsystems at 800-445-TOPS (from outside the U.S. and Canada, call 415-769-8700). Or write 'em at TOPS, 950 Marina Village Parkway, Alameda, CA 94501.

NEW!
Code Generator
for Clipper, dBASE IV,
dBase, FoxBASE+, and Quicksilver.

Finally, dBASE® and Lotus® have something in common.

Database reports without programming— with R&R report writers.

R&R helps you create reports quickly, without programming, directly from related databases. Use for turnkey systems and ad hoc reporting. Print in any layout, from columnar listings and mailing labels to preprinted forms and form letters. R&R is full-featured and flexible, so you can concentrate on making reports show exactly what you want to show, in exactly the way you want to show it. Any report.

Perform calculations as needed, including totals and subtotals. Sort and group records in any order. Select records with plain-English query. Save time with automatic TRIM, word-wrap, justification, currency, and date formats. Improve appearance with bold, italics, underline, different fonts, and graphics characters.

Lotus-like menus, WYSIWYG screen-painting, and HELP system make it easy to learn R&R. And since R&R report writers look alike, when you've learned one you know them both.

R&R Relational Report Writer

Works with dBASE III, dBASE IV, dBase™, Quicksilver™, and file-compatibles. Includes royalty-free runtime that requires only 25 KB of memory. Network support standard. Clipper™ and FoxBASE+™ Module required for .NTX and .IDX indexes, \$49.95. Optional Code Generator, \$149.

Cure Hayes fever.

2400etc/e

V.42 compatible

Get fast relief from high prices with ATI's high-performance, error-free modem for a fraction of the price.

Allergic to high modem prices? Here's news that will clear your head, not your budget.

ATI® Technologies' 2400etc/e® external modem* meets the competition feature for feature...and then some! Remarkably, it costs just a fraction of the price.

Relief is fast. With MNP® level 5 data compression, the 2400etc/e's throughput speeds exceed 4800bps, thereby lowering transmission costs.

The 2400etc/e supports both V.42 and MNP error-control protocols for 100% error-free transfer. And it's fully

compatible with standard and extended Hayes® 'AT' command sets. Plus, ATI's easy-set front panel controls provide convenient access to frequently used commands.

Don't suffer from high prices. The ATI 2400etc/e external modem cures Hayes fever for only **\$299.**** And that's nothing to sneeze at.

You'll be relieved to know that the 2400etc/e's capabilities are also available in a high-performance internal modem, at an equally non-allergic price. Only **\$239.****

IBM Debuts Portable, SX

*Rebate
Program
Aims to
Spark OS/2
Sales*

IBM has finally entered two of this year's hottest PC arenas, launching a high-end portable and a desktop 80386SX machine that incorporate the Micro Channel Architecture bus. Billed as a no-compromise machine for traveling professionals, the 21-pound PS/2 Model P70 386 features a 20-MHz 80386 processor, 4MB of memory (expandable to 16MB), a VGA-compatible 10-inch gas plasma screen with 16 gray levels, a full-size 101-key keyboard, a 1.44MB floppy drive, and one 32-bit and one 16-bit MCA slot. The tall, shallow device (12 inches high by 18.3 inches wide by 5 inches deep) costs \$7695 with a 60MB, 27ms hard drive and \$8295 with a 120MB, 23ms hard drive. A special port lets you plug in an external floppy drive or tape backup without using an expansion slot. The

Model 55 SX, aimed at customers standardizing on 386 systems, comes with 2MB of memory (expandable to 16MB), three 16-bit expansion slots, and other familiar PS/2 features such as built-in VGA support. It costs \$3895 with a 30MB, 39ms drive and \$4295 with a 60MB, 27ms drive. Additionally, IBM unveiled a rebate program for its slow-selling OS/2 system software. Through 1989, customers who buy OS/2 products will get money back when they also purchase IBM memory, add-in cards, disk upgrades, or selected applications from IBM and others. (The memory rebate is \$100 per MB.) "We think memory has been the inhibitor for OS/2," explains Winney Briney, IBM personal systems marketing director. "It's time to remove the inhibitor."

New Pascals Duel

*Microsoft
and Borland
Come Out
Swinging
Object-
Oriented
Languages
at Each Other*

Borland and Microsoft introduced new versions of their Pascal programming languages in May, sparking a fierce battle between the two software leaders. Both the steak and the sizzle of Borland's *Turbo Pascal 5.0* and Microsoft's *QuickPascal* is object-oriented programming (see the preview in this issue), which both companies predict will be the foundation of application development in the 1990s. Microsoft plans an all-out attack on the Pascal market, which Language Group Product Manager Stew Chapin acknowledges is owned by Borland. Microsoft is staging an aggressive marketing campaign to convince *Turbo Pascal 4.0* users to upgrade to *QuickPascal* (its first entry-level Quick version) rather than *Turbo Pascal 5.0*. Microsoft

will enable computer dealers to sell the \$99 product for as little as \$49.95; *Turbo Pascal* lists for \$149.95 with an upgrade price of \$34.95 from *Turbo Pascal 4.0* and \$75 from prior versions. "We are totally compatible with *Turbo Pascal 5.0*, and our extensions will feel and look more intuitive to the current Pascal user," asserts Chapin. Microsoft is being pressured by Borland in other language markets but still captures 59 cents of every language dollar spent with dealers, according to market researcher IMS America. However, claims Gene Wang, director of languages product management at Borland, other distribution channels actually give Borland a slight edge. Wang predicts that *Turbo Pascal 5.0* will simply outperform Microsoft's *QuickPascal*.

Leading Edge Rebounds

*Supplier
Ships Daewoo
Computers
Again, Cleans
Up Service
Backlog*

Leading Edge has resumed shipments of its Daewoo-made Models D, D2, and D3. And according to resellers, the company is once again meeting its commitments for repair, service, and technical support to customers and some 1600 dealers. "They are making parts available in a manner and in quantities unprecedented under the previous management," observes Alex Peder, manager of Ballard Computer, one of a group of resellers that forced Leading Edge to seek Chapter 11 bankruptcy protection last winter because it didn't meet its product commitments (see *Top of the News*, PCW, May 1989). The bankruptcy court has upheld Leading Edge's exclusive North American distribution rights for Daewoo Telecom computers,

and the company is receiving all the product it needs, reports John Sullivan, senior vice president of marketing, who returned to the company in April. In fact, Daewoo is financing those shipments and is in the process of taking over Leading Edge, says Sullivan. That will bring the company out of Chapter 11 and resolve some \$15 million in debt, most of it to dealers. Currently, all receipts are invested in rebuilding the company, which went from 200 employees to a handful and is now back to 50, says Sullivan. But a lawsuit against former computer supplier Mitsubishi Electric also must be resolved. Leading Edge has an installed base of more than 500,000 Daewoo systems.

Patent Awarded

*Quarterdeck
Will License
Method for
Writing to
Display*

Quarterdeck Office Systems has been awarded a U.S. patent covering a way of displaying windows on screen. The patent could affect other multitasking programs such as Microsoft's *Windows/386*, the principal competitor to the *Desqview* multitasking environment. This spring Quarterdeck, which claims to have shipped more than 1.2 million copies of *Desqview*, received patent number 4,823,108, entitled "An Improved Display System and Memory Architecture and Method for Displaying Images in Windows on a Video Display." Quarterdeck executive vice president Gary Pope describes the technology as a way to make applications write to a "pseudo screen buffer" instead of directly to screen. This enables *Desqview* to display within windows and update "poorly behaved"

applications that write to the screen rather than to the system. Among those programs are such current favorites as *1-2-3*, says Pope, who adds that the technology isn't limited to DOS or character-based applications. Quarterdeck, which at press time was studying other programs and considering licensing applications, refuses to indicate which companies might be affected by its patent. Microsoft is examining its exposure. "From what we know, we have absolutely no reason to believe that we have infringed on the patent in any way," says a spokesperson, who declined comment on how *Windows/386* displays windows.

Budget Express Blessed

*1-2-3 Add-In
Is First to
Get Bolstered
Marketing
Support
From Lotus*

Lotus Development and Symantec are teaming up to market *Budget Express*, the latter's new add-in for Lotus's *1-2-3* releases 2.0 and 2.2. The \$149 program is the first to carry a "Lotus Featured Product" seal and to benefit from extra Lotus marketing support, enthuses Symantec executive vice president Rod Turner. He claims that, unlike add-ins that give *1-2-3* peripheral functionality such as word processing, *Budget Express* provides enhancements to the core functions of budgeting, forecasting, and planning that users buy spreadsheets for in the first place. It expands on *1-2-3*'s columnar hide/unhide command with two-dimensional outlining that can hide the details of rows as

well as columns so that users can move between levels of detail in a few keystrokes. Virtual memory management stores unused portions of a worksheet on disk, freeing up memory. A goal-tracking feature lets users adjust expenditures to meet a goal, showing proximity to the target in an on-screen window. Lotus plans "a new level of commitment to future add-ins that significantly enhance basic *1-2-3* functionality," says Associate Product Marketing Manager Jim Richard. "We are taking another step in how we work with third parties and will help some products launch with time, money, and marketing and sales efforts."

Start-Up Challenges Intel

*Former Weitek
Executives
Plan Series of
Alternatives
to Intel
Components*

A Santa Clara start-up will begin shipping a series of Intel-compatible components in June that will provide system manufacturer and aftermarket alternatives to the giant chip-maker's products. Integrated Information Technology, founded in April 1987, will release its 2C87 and 3C87 math coprocessors, which it claims are both plug- and object-code-compatible with the Intel coprocessors for 80286- and 80386-based computers, respectively. While prices had not been set at press time, Vice President of Sales and Marketing Gene Parrott indicated that the parts would be priced about the same as Intel's but would have improved overall performance and faster graphics modeling. That combination may gain IIT as much as 15 percent of the market, says Dean McCarron, director of systems research at In-Stat, who reports that

the 3C87 runs about twice as fast as its Intel counterpart. Parrott claims that IIT has achieved 100 percent compatibility without reverse engineering or obtaining a license from Intel. "The coprocessors are designed from the ground up without access in any form to Intel documentation, personnel, or architecture." Founded by former Weitek executives, the 21-person company will distribute the coprocessors through mail-order ads, retailers, and system manufacturers. By year-end, IIT also plans to supply board makers with a high-end graphics chip compatible at 1024 by 768 with IBM's 8514/A hardware and application interface. It also will be backwardly compatible with the VGA Plus, VGA, EGA, CGA, MDA, and Hercules standards. ●

Break through!

COREL OPTICAL DISKS for NOVELL LANs

COREL announces the finest in data security and mass storage for Novell Networks.

As the world's leading developer of WORM (Write Once Read Many) interface software for IBM and Apple Mac computers, COREL brings its record of software excellence to the network environment.

Now, Novell Network 2.15 has a new storage solution breakthrough. COREL optical disk subsystems provide the ultimate back-up and highest security options available.

Operating on the network file server, COREL's optical software supports elevator seeking, directory hashing, and directory caching. Complete access

across Network Bridges let you support and run even your largest applications. No extra hard disk space or workstation memory is required.

Optical storage gives you the potential for infinite capacity since removable optical cartridges are used. And security is insured with the write-once character of the technology. You'll never worry about losing data again.

COREL software is completely compatible with Novell Network utilities, security levels, and all existing applications. The world's leading developer of WORM interface software invites you to make the networking breakthrough. For details, contact COREL Systems today!

Old myths die hard. While small businesses crank away at the low end of the technology curve, adopting computer solutions that are nearly obsolete, big businesses aggressively seek out the latest and greatest in next-generation products—sometimes even before their time. New technology represents such a boon to big businesses that they willingly suffer the added cost and effort needed to support it. Meanwhile, penny-pinching small businesses can't afford to take the chance that high tech will pay off, so they don't. Or so we say.

The truth, of course, belies the clichés. According to a recent survey conducted by the MIS publication *Datamation*, an astounding 64 percent of PCs in surveyed companies with 50 or fewer employees were connected by a LAN, compared to 32 percent in companies with 5000 or more employees. Similarly, in a

No Small Potatoes

Software developers should design their programs for the most demanding audience of all—small-business users.

recent *PC World* study, 41 percent of all readers who used 386-based systems worked in companies with 100 or fewer employees, compared to only 25 percent in the largest organizations—those with 5000 or more workers.

Despite such evidence, software developers continue to think of big business as the proving ground for new, sophisticated applications that extend the power of personal computing. It's not hard to understand why. Software firms like to believe that their fortunes lie in huge volume sales to Fortune 500 companies. These firms presumably have both the business motivation to adopt complex new programs and the centralized technical services needed to support them.

Yet in big business this pattern of buying and using personal computer technology is inexorably withering away. Corporate decentralization means that more and more business units are now in charge of managing their own PC budgets. MIS is under fire as frontline managers try to bring training and support costs into line. In many big businesses, PC purchase patterns now match those of small business.

As the numbers above also suggest, small companies are proving quicker to adopt high-tech solutions than their big-

business counterparts. While most large corporations wrestle with the dilemma of moving forward while burdened by an accumulation of incompatible hardware and applications, small businesses can start with a clean slate, free to consider new technology as a way to level the competitive playing field.

That makes small businesses more daring in their use of new products but also more demanding. Without the support of full-time MIS staffs, managers in small companies expect applications to be simple to install, use, and maintain, while being powerful and easy to extend as the business grows—all at the same time. There's no more challenging problem for software developers. Small business has become a red-hot crucible to test the best ideas the computer industry can muster.

Some smart companies are finally getting the message. Take Novell, for example. With most of its sales going into sites without a full-time MIS director, the company must have realized it was extremely vulnerable to a competitor that could smooth out the problems of day-to-day LAN use. So Novell's next-generation LAN operating system, *NetWare* (continues)

FILL IN ANY FORM QUICKLY AND EASILY ON YOUR PC.

FormFiller 2.0. The Complete Form Fill-In System.

Consider all of the existing forms that you're required to fill out—airbills, government forms, insurance claim forms, invoices, purchase orders and others—how do you accurately, quickly, professionally—and above all, **easily** fill in these existing forms?

The answer is FormFiller Version 2—the complete system for filling in forms on any PC and printer—in just minutes!

Precise Spacing Capabilities And Unmatched Flexibility.

FormFiller will fill in absolutely any form, regardless of its complexity (even double-sided and multi-page forms!). It also includes an innovative system that allows pinpoint-precise spacing for any position on the form—and provides over 40 financial and math functions for use within the form.

And FormFiller now supports virtually ANY printer—including the new HP LaserJet Series IID Duplex printer and many others.

New Import/Export Features.

Version 2 has sleek new import capabilities including dBASE II, III, and Lotus 1-2-3—so you can swap data with virtually any application, eliminating re-entry of data.

Easier Than Ever To Use!

Save hundreds of hours of labor filling in forms. Simply insert your form into any dot-matrix or laser printer and invoke the "print grid" command. FormFiller will actually print numbered horizontal and vertical lines right on the form. You simply enter the coordinates for each blank on the form into the computer. From these, the system creates a "master

template" of the form. Now, the computer and the printer are completely synchronized! This master template (with a work area of 190 columns by 240 rows) is then displayed on the screen—so you fill in by *tabbing directly from blank to blank!*

Store your form templates for easy call-up and fill-in anytime. FormFiller will even *look up pieces of information and automatically fill them in for you* (i.e. part numbers, addresses, retail/wholesale prices, etc.).

Powerful Math Functions.

FormFiller has spreadsheet-like math capabilities that will perform complex financial/trig functions within forms. Functions available include *internal rate of return, net present and future value, straight-line depreciation, principal payment amount, mortgage payment amount* and over 30 more! So you could, for example, tell FormFiller to add the numbers in specified fields, deduct a specified discount, and print the total in position on the form—automatically!

By designing programs that effectively meet the needs of small-business users, developers aim at the highest standards possible in the industry as a whole: software that makes no compromise between power and ease of use, offers easy installation and maintenance, comes with clear documentation and useful tutorials, and provides a worry-free growth path. Right now, we're still pretty far from that ideal. Let's hope we get there soon.

Just Being Fast Isn't Good Enough...

Micronics 25 MHz and 33 MHz motherboards allow you to maneuver in the 386 fast lane!

Some manufacturers push components and designs to improve performance and reduce their costs. Pushing components, even a little bit, creates the kind of heat and stress that cause systems to crash and data to be lost forever.

Micronics refuses to give in to this practice. We recognize there is nothing more valuable than your data. Our motherboards are designed and manufactured with the kind of reliability demanded by today's high performance computers. These computers require devices such as: cache memory, fast static RAM and coprocessors originally used only in mainframes. Advanced operating systems

including UNIX and OS/2 require high levels of design sophistication. Large databases, spreadsheets and multiuser applications also have complex critical timing requirements. Micronics motherboards are built to meet these needs.

Advanced engineering, high quality, and unequalled reliability: motherboards created by Micronics to help keep you in the 386 fast lane!

Call now for more information and the Micronics supplier nearest you.

The new \$995 HP DeskJet PLUS Printer.

But they keep looking at the evidence.

Mr. Arnold R. Jones

Dear Reader:

Imagine being able to put out merged text and graphics that look like this. In fact, that your clients will think you're using a laser printer. You're not. You're using the \$995 HP DeskJet PLUS printer instead.

This is one of many business charts you can print out on the new HP DeskJet PLUS printer. Software for this test and graphics demonstration by Harvard Graphics.

No, I'll tell you what made me —
A DeskJet PLUS printer from HP!
(With apologies to William Blake)

MegaCorp 1988 Sales History

You won't believe your eyes (or ears), either. The HP DeskJet PLUS printer gives you the same crisp, black lettering. Clean, sharp graphics. And whisper-quiet operation. But it uses advanced inkjet technology to supply these laser-like qualities for the price of a 24-wire printer.

For just \$995, you get 300 dpi in a trim 15-pound package that's twice as fast as the original. What's more, it has built-in landscape and improved font selection. Including ten built-in fonts and over 100 optional fonts, with sizes up to 30 points. And its 20,000-hour MTBF

assures a long, happy life.

So call 1-800-752-0900, Ext. 276J for the name of your nearest authorized HP dealer. Then judge the HP DeskJet PLUS printer for yourself.

No Matter How It's Protected, Be Sure You Can Back It Up.

Several products can back up protected software. But only two are tough enough to handle even the trickiest protection schemes.

Copy II PC, for just \$39.95, backs up more protected software than any other program. What's more, it can remove copy protection already on your hard disk. PC Magazine calls it the "easiest of such programs to use." And now, with our menu-driven Noguad, it's a snap. Copy II PC easily handles Lotus 1-2-3 and over 100 other top-selling programs.

Now removes
Superlok, Everlok and
Prolok copy protections.

For the ultimate solution, try the **Copy II PC Deluxe Option Board**. For just \$159, it gives you the same advanced technology used by commercial disk duplication firms.

PC Magazine reported it "could not find a program this board couldn't handle." It's so powerful, in fact, it even lets you read and write Mac data files in a IBM PS/2 Model 25 or 30, or a PC or AT with a 3.5" internal drive.

No matter how it's protected, be sure you can back it up. For the dealer nearest you, or to order direct, call (503) 690-8090, M-F, 8 a.m. to 5 p.m. (West Coast time).

Trust the User

The world is a better place the more it is based on trust. That's why I avoid copy protected software. Why would anyone want to pay a supplier whose interests are best served by making our work more difficult? Likewise I avoid computer products that are rigorously defended against competitors, like those in the big-power lawsuits you have been covering recently ["dBASE Users: Don't Take It!" *Another Angle*, PCW, April 1989]. The marketplace offers plenty of good products made by companies eager to cooperate with their customers, not exploit them and the competition. Why buy anywhere else?

Peter Morris

Pick a Card, Any Card

Brian Livingston's article "Let There Be Standards" [*Another Angle*, PCW, March 1989]

prompts me to offer a different slant on the theme. Hardware vendors would have us believe that businesses are hotbeds of card swappers feverishly moving components from one computer to another. They liken PC standards to the standards in the automobile industry. Tell me, when was the last time you tried to fit a General Motors oil filter into a Porsche? Cookie-cutter sameness and component swapping are less important than the overall quality of the computer you buy, which should be designed and built to last—and, of course, to accept a reasonable number of enhancement parts.

Tom Smith
Fort Vancouver, Washington

Take My PS/2, Please

I just read the letter "Why Not a PS/2?" from Peter H. Strong [*Letters*, PCW, March 1989]. We have 12 PS/2s in our small department—6 Model 30s, 3 Model 50s, a Model 50Z, and 2 Model 60s. We have had five major problems in less than a year. Our 3 XT and AT clones have had nary a problem in more than two years. The contention that "MCA-equipped PS/2s are twice as reliable as other PCs and cost half as much to maintain" is just another example of IBM's marketing hype. My experience suggests that PS/2s are half as reli-

able and cost twice as much to maintain.

Overhead or Overkill?

I just finished reading your preview of *SideKick for Presentation Manager* [PCW, March 1989]. Did I read it right—3MB of RAM and 2MB of hard disk space to run *SideKick*? They've got to be kidding. What we have here isn't progress but the proverbial white elephant. If we extend this to the absurd—where it belongs—in a couple of years I'll need 10MB of RAM and maybe two hard disks just to sit down and write a letter. Not that the letter would look any better, but I could say I was using the latest operating system and all my system overhead.

The Great Laptop Weigh-In

The reviewer of the Mitsubishi MP 286L laptop [*The Hardware Shelf*, PCW, February 1989] stated that at 17 pounds, it was about 2 pounds lighter than the Zenith SupersPort 286. The Zenith laptop may have gone on a feeding frenzy, but I purchased (*continues*)

If you want better word processing, don't settle for Perfect.

The trouble with WordPerfect® is, sometimes it isn't. Not when you compare it to our new Microsoft® Word version 5.0. Not when you consider that with Word 5.0, you'll pump out your day-to-day jobs quicker, easier, even smarter than you ever thought possible. On your IBM® PC or 100% compatible.

Introducing new Microsoft Word 5.0. When Perfect just isn't good enough.

It doesn't get much simpler than this.

Example: With Word 5.0 you can choose commands by either using simple speed keys or just selecting from a menu.

You can tab, delete, italicize, move, change font and size, even cut and paste with about 50% fewer keystrokes than you-know-who.

Your workgroup can even make any

annotations right on a document, then you can merge and collect all the comments. WordPerfect? No comment.

You can also sort, list, search and archive files across multiple directories,

Young professionals use Arbor Walker to commute.

Soon, young professional women will no longer be using Arbor shoes simply to climb the corporate ladder. They'll be using them to get there.

This fall we're introducing the Arbor Walker — a shoe that goes quite a few steps further than the now-accepted but unattractive tennis shoes women have been wearing to and from work.

Made of Italian leather with a rubber sole, the Arbor Walker is the perfect combination of style and durability.

Look for promotional materials and carrying cases in early September. Our sales point is: "Women don't have to sacrifice looks for comfort."

one last year, and it weighed 10.5 pounds, 14.5 pounds with the battery pack. The Zenith weighs in 2.5 pounds lighter—quite a difference!

Doug Neumann
Kansas City, Missouri

The SupersPort 286 we weighed hadn't gained excess inches around the waist, just a battery charger. We defined the traveling weight of battery-powered PCs as the combined weights of the laptop itself, its battery pack, and the charger. —Ed.

3½ INCH 1.4 MB DISKS FOR ONLY ONE DOLLAR!

New Invention Makes It Possible!

Do you use the new, high capacity, 3½ inch disks? If so, you have paid four, five, even six dollars per disk! Byte for byte, that is as much as SIX TIMES the 'old' 360K floppies. Now you can convert all your programs, data, and files to the new format, WITHOUT PAYING THESE PRICES!

HOW IS THIS POSSIBLE? Have you ever tried to format a regular, 'low density' 3½ inch disk to 1.44 MB? Of course you have! It doesn't work! The computer gives an invalid media error. Our company was putting in a large network of IBM Clones. We have grown from a small company to a million-dollar corporation in two short years, and we didn't do it by wasting money. So, of course, we tried to use the cheap, 720K disks. Total failure.

ENTER OUR CRACKPOT ENGINEER. Our Crackpot Engineer wondered what was the difference between the disks. He tore them apart, analyzed the media. He found NO DIFFERENCE WHATSOEVER! Yet, they would not format. Why? Then he started examining the plastic housing. And he found the difference. It is NOT in the media, IT IS IN THE PLASTIC CASE!

TOTAL FAILURE! Our Crackpot Engineer (among other things, he invented the Electronic Flea Collar) sent a brand-new 720K disk to our machine shop, and asked them to modify it. They did... and the DISK IMMEDIATELY FORMATTED! But, within 10 minutes of use, it totally failed. It lost data all over the place. Back to the drawing board. The disk was dis-assembled and examined. It was found that, in performing the conversion, a microscopic piece of plastic had entered the housing, and total... ruined the disk. It was obvious that, if the conversion could be done reliably, it required extreme precision.

ENTER OUR OTHER CRACKPOT ENGINEER. Our president is a mechanical engineer. One of the best in the country. While a research scientist at Colorado School of Mines, he completely revolutionized the field of water jet drilling. He tackled the problem. Finally he came up with a solution - a precision tool which could perform the modification EVERY TIME and leave no plastic particles which would damage the disk!

MONTHS OF TESTING. We then commenced on a testing program. We modified and formatted thousands of disks, and tested them for data integrity. Out of one thousand disks, one would not format, two had one bad track. NOT ONE LOST ANY DATA! We then put a disk on a computer with a bat file which copied data to a disk, read and checked every byte, then copied the data back to the disk. The program ran 24 hours a day, for TWO SOLID WEEKS without even one error! We were finally convinced that the procedure was reliable enough for a product.

OUR OFFER. Here is our irresistible offer. Purchase our DoubleDisk Converter for the price of \$39.95. If you are not COMPLETELY SATISFIED, return the DoubleDisk. You will receive a FULL REFUND! What is more, if a disk ever does not convert properly, send us the disk, and we will send you a 1.44MB disk from a major manufacturer in exchange!

YOU CAN'T LOSE! You will save MORE THAN THE PURCHASE PRICE IN CONVERTING ONLY YOUR FIRST TEN DISKS! From that point on, it is all profit. After converting only 100 disks, and after deducting the cost of the DoubleDisk, you will have saved AT LEAST \$425.00! Quite a return for an investment of only \$39.95!

Payroll Booster

Your article "Hot Picks in Small Business Accounting" [PCW, March 1989] was most interesting. However, I do not understand why the payroll module was not considered important. Even with a small staff of six, I find my payroll module invaluable in calculating and posting deductions and employer payments.

Rev. Donald White
Temiscaming, Quebec

Granted, payroll and other features we noted briefly, such as inventory, are important to many small businesses. For comparing the products on review, however, we chose to examine the three crucial elements of business accounting systems: general ledger, accounts receivable, and accounts payable. —Ed.

Do You Love Your Mouse?

"PageMaker Speedup Tips" [Tips and Techniques, PCW, March 1989] finally legitimizes my argument that the mouse is a slow and inefficient device for selecting functions. Most mouse aficionados seem to be emotionally wedded to its alluring image of sophistication and bravura. Keyboard functions are invariably faster than engaging functions with a mouse, which requires painstaking precision.

Acceptance of Windows also seems to be driven by emotional concerns more than by practical ones. While the displays are certainly beguiling, the amount of memory and time required to generate the screens is appalling. Even worse is the rush of

CompuStar II

IT EATS IBM'S LUNCH... AND SERVES DELL FOR DINNER!

Introducing Wells American's CompuStar II. It's one *hungry* machine. Feed it the toughest applications you can dish out and it's ready for "seconds" before IBM, Dell and all the others even get started.

IT FEEDS ON THE COMPETITION.

CompuStar II's enormous appetite for devouring the competition comes from its unique, modular design. Interchangeable, plug-in CPU "modules" are available in 80286, 80386SX and 80386 configurations.

The modules are remarkably inexpensive — as little as \$750 for a '286 module, and incredibly powerful*. The 33MHz '386 module achieves a stunning MIPS rating! Best of all, for up to one full year after purchase, you can trade in the module you originally select toward the purchase of any of the other more powerful modules.

IT DEVOURS OTHER COMPACTS.

Unlike other small footprint micros, CompuStar II won't put your computer expansion needs on a diet. Each system features an amazing six bus slots — four of them available in a fully configured VGA system. That's 25% more than IBM or Dell gives you. Better yet, you can have up to 11 slots with CompuStar II's exclusive bus expansion chassis. No other compact system available offers this much room for growth. And no other comparably sized system can accommodate that growth better than CompuStar II.

BUS EXPANSION CHASSIS

Its whopping 200 watt power supply gives you more than twice as much reserve power as IBM or Dell.

And CompuStar II has more room for disk/tape drives — four compartments in all; three accessible from the front panel. IBM and Dell give you just three compartments and only two are accessible from the front. CompuStar II also accommodates 5 1/4" and 3 1/2" disk drives. IBM and Dell restrict you to 3 1/2" drives only.

IT'S ALSO WELL-MANNERED.

Worried about quality and reliability? Don't! Wells American has been making PCs longer than IBM or Dell! Each CompuStar II is money back guaranteed for 31 days, factory warranted for a full year and can be field serviced from hundreds of locations worldwide.

When you think about it, buying an IBM or Dell system instead of our new CompuStar II is sort of like eating hamburger when you could have had steak — and paid less for it. CompuStar II... from Wells American. It makes "mincemeat" of everything else.

Avoid the ins and outs of

Today's manager has to juggle dozens of different tasks. But dealing with the ins and outs of different software packages shouldn't have to be one of them.

Now there's Framework III™, the one program that does everything a manager needs

to do. Framework III is a tightly linked set of the six most often used functions you'll find on a computer: word processing, spreadsheet, database, outlining, graphics and communications.

That means you'll always have easy access to all your information. Because you always use the same, easy-to-learn interface—no matter what the task at

hand. Or how many tasks you have to do at the same time.

See what you've been missing.

The result? You can concentrate on managing your business. Instead of managing your software.

For example, you can interrupt word processing to log on to a mainframe; get needed data; jump into a spreadsheet; use the data to create a graph; and insert it into your document. Without ever leaving the program. It's that simple.

It's just as easy to transfer files between Framework and other programs, like Lotus 1-2-3* and WordPerfect.* Or use its telecommunications module to access files from other computers or link up to remote databases.

And you won't have any trouble keeping track of it all, because Framework lets you open as many windows as you'd like to—simultaneously.

The program also integrates a speedy spell-checker and thesaurus in its powerful word processor. As well as macros, linking and over 170 functions in the spreadsheet. And a database that reads and writes dBASE* and other files for

other software packages.

Would you rather carry
around six programs or one?

There's even a version for local-area networks. Framework III LAN simplifies the job of coordinating your workgroup. You can use its built-in electronic mail to circulate memos. Or create complex documents that require input from several people.

What does it all add up to? A product that offers a more efficient way to organize your thoughts, analyze your information and communicate your decisions.

merging into form letters.

What else could a manager possibly want in a software package?

How about an easy-to-use programming language? Framework's FRED* lets you tailor the product to your group's needs. Or you can use one of the many third-party applications.

Which is, when you think about it, a more efficient way to manage your business.

PROLYBIUS MENUS™

a dos menuing system

Multiple Menu Styles
Single Key Maneuverability
Easily Command the Powers of Dos
Single Logon Password Protection
Easily Customized

MULTIPLE MENU STYLES

Organize your menus and menu items in any manner you wish. Choose from 5 menu styles for each menu or customize your own screen using the boxing style. Display up to 39 items on a single screen.

SINGLE KEY MANEUVERABILITY

Menu items are selected by highlighting an item or entering a number. Randomly maneuver from menu to menu by pressing a single function key.

EASILY COMMAND THE POWERS OF DOS

Expand file descriptions to 30 characters. Save the commands and paths of each menu item and execute them with a single key stroke. The unique design of this system eliminates the need for training in dos.

SINGLE LOGON PASSWORD PROTECTION

Initial logon password protection controls access to all programs. Access levels are assigned to users, menus and menu items to protect sensitive data. This procedure allows time sharing and networking management.

EASILY CUSTOMIZED

Uses a configuration utility that saves the commands and paths of each menu item making the customization of your menu an easy task. Add, change or remove menus and menu items, control password protection, protect data files, setup user IDs and passwords and establish access levels.

How to Redesign a Data Base

The example of an alumni data base in "How to Design a Data Base File" [Tips and Techniques, PCW, March 1989] shows poor planning. The fields should be in logical order of their frequency of use. Most likely you'll be sorting by last name, then by first. You'd want to know the donation nearly as often as the individual's name. A title field should be included if your efforts to appeal to an individual are serious. "The Honorable" doesn't want to be addressed simply as "Mr."

The alumnus's income, as shown, is a junk field. Ranges of income—below \$20,000, \$20,000–\$30,000, and so forth—would be better for sorting. One final caveat: Provide security if private data such as salaries is to be collected. Train staff to respect the sensitive nature of all data elements.

Corrections and Clarifications

Shortly after Alan Southerton's review of Logitech's ScanMan bewailed its limited 200-dpi resolution (The Hardware Shelf, PCW, February 1989), Logitech introduced an upgraded version with 100-to-400-dpi resolution.

The review of Turbo Pascal 5.0 (The Software Shelf, PCW, March 1989) should have stated that the utility Turbo-Plus 5.0 comes from Nostradamus, Inc., in Salt Lake City, Utah. PC World regrets the error.

Now QuickPascal makes this software go even faster.

Even the quickest minds tend to brake suddenly when confronting new languages.

Enter new Microsoft® QuickPascal Compiler.

The first Pascal that is not only powerful but easy, intuitive and 100% headache-free.

For example, our new hypertext QuickPascal Advisor offers on-the-job training: by cutting and pasting sample code you can learn to program in Pascal from scratch. And if you do hit a snag, the Quick Advisor can straighten everything out right on the spot.

To accelerate your thought processes even more, all of our processes are seamlessly integrated; no other Pascal offers you easier

access to your editor, debugger and compiler.

What's more, QuickPascal is the first PC Pascal to offer Object Oriented Programming, or OOP. With objects, you can easily assemble whole programs from modular building blocks of code and data. And once you know Pascal, OOP is a snap. Which means, you get maximum productivity with minimum effort.

Naturally, our Pascal is also fully source compatible with Turbo Pascal®.

Your Password Is SKDESMDPM

Q. I was recently chastised for using my name as a password to the department LAN. The system administrator said my password should not be a name, a common word, my social security or phone number, my birthdate, and so on. Furthermore, I'm supposed to use a different password for the E-mail system. But I just can't seem to remember a long password like the administrator suggests, such as

OXQIEKS and 8JQT8HQ58F3.
Any advice?

Andrew J. Swanson
San Diego, California

A. The best password is one that you'll never forget and no one else will ever guess. Some administrators warn against the use of *any* real word. (You may recall last year's infamous Internet worm, which used the UNIX dictionary service to guess people's passwords.) But here are a few tricks to give your brain cells a rest.

Pick a phrase or sentence you'll remember, IBMPS2-MODEL60, for example (the more characters the better). Then replace each character with the one that precedes it alphabetically or numerically, and voilà—you have the password HALORILNCDK59.

If you're a touch-typist, try shifting your fingers left or right one key and then typing a word you can remember. Shifted to the left, for example, EISENHOWER becomes WUAWB-GIQWE. Another variation is to use the first (or second or third) characters of each word in a long sentence. If you can remember "To be or not to be, that is the question," you should have little trouble recalling OEROOEHSHU.

Foreign Power

Q. I'm in the Air Force and have been assigned to a base in Germany. I'm concerned about

how 50-Hz electrical power will affect my PC and printer, a Tandy 1000SX with a Tandy hard disk card and a Tandy DMP 430 printer. I can use a step-down transformer to reduce the voltage from 220 to 110, but the transformer can't change 50 Hz to 60 Hz. Will I be able to operate my system at 50 Hz? Will doing so harm the equipment?

David E. Smith
Omaha, Nebraska

A. These days electronic and computer equipment rarely depend on the frequency of AC. Although Tandy won't guarantee that its U.S. products will operate properly overseas, the spec sheets for your equipment say that 50-Hz power is acceptable. However, you should be less concerned about frequency than about improper voltage levels, which can seriously damage electronic equipment.

Power converters, which use lightweight electronics to cut *current* by suppressing half of each cycle, are fine for hair dryers, but they still allow the high *voltage* to pass through. Be sure that you use a step-down transformer, which is made from heavy coils of wire, to reduce Germany's 220-volt power to 110. The size you need depends on your equipment's total wattage. You should also be aware that In-

Ted Standish has a bear of a job.

As Director of Information Resources for the North Atlantic Shaving Group of The Gillette Company, he's been given the task of simplifying and standardizing the business systems of the Company's European and North American divisions.

"With the coming of the European open market in 1992, we want to take a more unified approach to products, as well as to manufacturing and marketing," says Ted.

Ted Standish, Director of Information Resources, North Atlantic Shaving Group of The Gillette Company.

"Before Lotus Agenda, there were three things I always forgot. Tasks I assigned, promises I made, and I can't remember the third."

"This means dealing with hundreds of issues, projects, facts and people throughout the North Atlantic region every day.

"As you might imagine, reams of little pieces of paper with notes, phone numbers, ideas and who-knows-what-else were beginning to take over my office."

Which is why Ted visited his local computer software reseller and bought Lotus® Agenda®, the personal information manager.

In Agenda, Ted has a tool that's helping him manage people, projects, ideas, plans and information, all with incredible efficiency.

Because Agenda allows him to enter

information into his PC without having to structure it in advance. Agenda automatically arranges the data any way Ted wants so he can understand

it better, formulate new ideas better and extract the answers he needs better.

"It lets me focus more on using my information and less on processing it," says Ted.

"For example, I can dump in all my 'to do's' and have Agenda organize, prioritize and categorize them automatically. And whenever I call up a project, person or due date, I'm instantly given all the background information I need to make smart decisions.

"Now I no longer worry about what I told someone in England, or what somebody else set up in France, or who's in Boston doing whatever.

"Agenda allows me to quickly consolidate all these things in a single place. And discover relationships between people and responsibilities, projects or any other relevant topics that come up.

"Now I can see at a glance who's promised to deliver what and by when. More important, I can keep my own promises."

And Ted isn't the only business

person who's come to rely on Lotus Agenda.

The Royal Bank of Canada is using it to monitor international economic and political activities. The accounting and consulting firm of Laventhol & Horwath is using it to track and support its computer systems all over the country. And the CAP International market research company is even using it to predict trends.

The list goes on and on. The point is, Agenda can significantly help you, too. Especially now that it

terTAN, which handles sales of Tandy's overseas products, is not obliged to fix, and may be unfamiliar with, your U.S. system.

Optimizing DOS 4.0

Q. I recently installed DOS 4.01 on my IBM PS/2 Model 60's 70MB hard drive. The Install disk's SELECT program "suggested" various CONFIG.SYS and AUTOEXEC.BAT commands [see **FIGURE 1**]. Can you explain what each command does and whether running IBMCACHE, BUFFERS, and FASTOPEN together is counterproductive? Basically, I run standard business programs. Please help me optimize my system.

Scott A. Binder
Chester, New York

A. SELECT does a good job of setting up a system, but you can indeed fine-tune those settings

for better performance. Unless you use <Print Screen> to print graphics screens, remove the GRAPHICS command from AUTOEXEC.BAT. That done, CONFIG.SYS is where you need to concentrate.

Initially, DOS loads standard device drivers for the keyboard, screen, printer, floppy disk, hard disk, and clock. Each driver decreases the amount of user RAM available. Let's look at yours.

ANSI.SYS augments the keyboard and screen drivers, enabling you to reassign keyboard keys, manipulate the cursor, and control screen colors. The optional /X lets you define the extended keys of the enhanced keyboard (the middle keypad) differently from their counterparts on the numeric keypad. Using the /K parameter prevents such redefinitions. A /L causes 43- or 50-row screens (set by a MODE command) to be retained for programs that would otherwise reset to 25 rows.

The DEVICE = \IBMCACHE.SYS command installs a disk cache driver, which takes about 8K of user RAM, to improve disk performance. The parameters specify the size in K (128), place the cache in extended memory (/E) instead of user RAM, and set the cache page size in sectors (/P4). Since you aren't using extended memory for anything else, increase the size of the cache to use more extended memory.

BUFFERS can specify from 1 to 99 buffers, or up to 10,000 if the /X parameter finishes the command, telling DOS to put them in expanded memory. Each buffer uses 532 bytes of user RAM. A buffer works like a

small disk cache, holding a sector of data read from or written to disk. The number after the comma, if present, is the number of look-ahead buffers, up to 8 at 512 bytes apiece. Buffers degrade disk cache performance, so set the number of buffers to 3 to reclaim over 15K.

BREAK = ON instructs DOS to look for a <Ctrl>-<Break> to get out of an application every time the application makes a DOS call. It's of no use to you, so remove it—system performance will improve.

FCBS sets the number of file control blocks that DOS can open at one time, and the number that can't be closed. A file control block is a CP/M-like structure for handling files. Each takes up just 37 or 44 bytes but is used only by old (pre-DOS 2.0) applications and only if you load SHARE. Use FCBS = 1,0 and you'll get back almost 1K.

FILES is the replacement for FCBS and specifies the number of files that may be open at once. The default is 8, the minimum; the maximum is 255. Above 8, each file adds 64 bytes to DOS. If you haven't seen the error message "Too many open files", then 8 is sufficient.

LASTDRIVE specifies the "highest" letter that may be assigned to a floppy or hard drive, to an installed device driver such as VDISK.SYS, or, by the DOS command SUBST, to a subdirectory. The command has no effect on performance or RAM.

INSTALL loads the memory-resident commands FASTOPEN.EXE, KEYB.COM, NLSFUNC.EXE, and SHARE.EXE, placing them in an optimal position in memory. DOS 4.0's FASTOPEN.EXE stores in memory the loca-

How Acer helped a regional firm

"Acer computers helped us take accounting out of the realm of dry history and place it in the real world of now. We've traded the green eyeshades for computers that help make accounting a continuous, current process—and give us a considerable advantage over our competitors."

*Mark A. Fien, CPA
Stonefield Josephson
Certified Public Accountants

60 employees, 30 Acers*

In Southern California, a 60-person CPA firm has proven that with the help of Acer computers, a single-office company can successfully serve clients nationwide. Flexibly. Quickly. And profitably.

Stonefield Josephson, a 15-year-old CPA firm, is one of a new breed of CPA firms that's leading its clients into the age of technology.

Like many other accounting firms nationwide, Stonefield Josephson uses Acer computers for a variety of in-house business applications, including accounting, tax preparation, auditing, financial business management and word processing.

Networking Client and Accountant

But the firm has taken computerization a step further, by installing Acers right in the

clients' offices. An on-line information system links Acer PCs to minicomputers, and utilizes specialized software to keep a steady stream of real-time information flowing between accountant and client. Whether the client is three miles or three thousand miles away.

Instead of assigning a CPA to

physically go to a client's office to do accounting work, Stonefield Josephson automates many of its clients and accounting professionals with an Acer computer. Through a modem connection, the CPA can monitor the many financial facets of its client's operation, right from the Stonefield Josephson office in Los Angeles.

become a national success.

"Computerization has changed our role from the traditional passive accountant to active consultant working in real time," says Mark A. Fien, CPA for Stonefield Josephson.

Acers Play a Key Role

"And Acer computers are an integral part of the way we do

business. With over 300 corporate clients across the nation, from Hawaii to New Jersey, the computers we use in our clients' offices, as well as in our own, must be fast, reliable and affordable. The Acers fit the bill perfectly.

"Computerization has helped our firm grow 125 percent, with only a 35 percent increase in

staff, in less than 5 years.

By using Acers to service

our client base, Stonefield Josephson is working smarter and faster to provide its clients with the highest quality accounting solution for their needs. And that's what good business is all about."

tion and/or the contents of the most recently accessed directories and files of one or more hard disk drives. Subsequently, a stored directory or file can be accessed from RAM instead of from the hard drive.

The first number following FASTOPEN specifies the number of directory or file entries for the indicated drive; the second sets the number of "continuous" buffers for storing directory and file contents. Each file entry takes 35 bytes from user RAM, and each buffer takes 16 bytes. The default is (34,34). The first number should at least be greater than the system's deepest level of subdirectories.

If you need RAM more than speed, you can reduce the num-

bers or remove FASTOPEN altogether. However, as with any cache, setting the sizes too small can be worse than not using a cache at all. The optional /X parameter tells the command to put the entries and buffers in expanded memory but limits the total amount of usable space to 16K.

SHELL specifies a replacement for COMMAND.COM, DOS's command processor. Your SHELL command permanently (/P) replaces COMMAND.COM with a copy of itself to increase environment space to 256 bytes (/E:256). The maximum is 32768. Unless you see the message 'Out

of environment space', don't increase the /E: value.

Note that in addition to considering which device drivers and memory-resident programs to install, you must also consider the installation order. Load device drivers first, then commands that modify DOS's defaults, and then INSTALL's programs. SHELL should always be loaded last.

You know
exactly what
your company
wants in a
color printer.

I'd like to replace with a 30MB hard disk. I've heard that the BIOS of older PCs may not support a hard drive. How can I tell if my PC is upgradable?

Bob Peretto
New York, New York

A. It's true that the BIOS of early IBM PCs, known as PC1s, does not support controller cards that use on-board ROMs, such as EGA and VGA video adapters and hard drive controllers, or device drivers. I can tell that you have a PC2 (which does not suffer from this limitation) because you have a third-party storage system.

To verify that yours is a PC2, insert the DOS disk that contains the DEBUG command into drive A:, type **A:DEBUG**, and

press **<Enter>**. At DEBUG's hyphen prompt, type **D F000:FFF5 L9** and press **<Enter>**. If the date displayed on the right side of the screen is 10/27/82 or later, you have a PC2. Press **Q** to leave DEBUG. Unfortunately for those wanting to upgrade a PC1, IBM no longer sells BIOS upgrade kits, and compatible ROMs are no longer available.

Something to Bark At

Q. It seems that every other month I see a program in PC World's Star-Dot-Star column that refers to BIOS Interrupt routines and DOS function calls. I assume that such ser-

vices are encoded in the ROM BIOS and in DOS, but I have no idea how to use them. Can you recommend a book that lets the cat out of the bag?

James W. Perry
Aurora, Colorado

A. PC World's Star-Dot-Star editor, Tom Swan, tells me you should pick up Ray Duncan's *Advanced MS-DOS* (Microsoft Press, Redmond, Washington, 1986). He says when it comes to DOS programming in C and assembly language, this book is the cat's meow.

By using ordinary phone lines, Carbon Copy Plus lets your PC gain complete control of a remote PC. So two users can share the same keyboards, disks, screens and application programs. And if you're sharing a graphics program, it's not a problem. Because Carbon Copy Plus connects more incompatible graphics standards than anyone else.

In fact, Carbon Copy Plus makes it simple to perform lots of tasks, like remote training, product support, customer service and remote product demonstrations. That's why it's in more than twice as many installations as any other remote control software.

Carbon Copy Plus. It makes controlling a remote PC a definite possibility.

Carbon Copy Plus.

Without it, controlling a PC isn't remotely possible.

THE EXPERTS AGREE:

"Delrina Technology's PerFORM (forms) program for the PC surpasses both the Mac programs and other PC programs. With its sophisticated features, excellent forms templates and simple operation, it's ideal whether your job is to design a variety of forms or to fill them out on screen or on paper."

—Bill Crider, *Publish! Magazine*, April 1989

"PerFORM has set a new standard for quality and ease of use in form design. On a 10-point scale PerFORM earns an 11, adding features you didn't even know you wanted until PerFORM came along...the software is fast, plus it's reliable, versatile and a snap to learn and use."

—Thad McIlroy, *Personal Publishing* February 1989

"PerFORM is hot!...head and shoulders above any forms package I've seen to date."

—Andrew Seybold, *Outlook on Professional Computing*, September 1988

Now Peter Norton

If you've ever seen the words "GENERAL FAILURE ERROR" on the screen of your PC, you know you don't need to be ill to feel sick.

All you need is a corrupted disk with some valuable data stored aboard.

When that happens, it's time to call on the remarkable new *Norton Disk Doctor*.™

The Norton Disk Doctor is one of 27 data recovery and disk management tools in the latest Advanced Edition of the Norton Utilities.®

It's also the most significant advance in utility software technology since Peter Norton first began saving the data and the derrières of grateful PC

You can summon the Disk Doctor, which will

determine the exact nature of the problem, report it and, in most cases, fix it for you.

All by itself.

The Disk Doctor can diagnose and repair everything from bad partition tables and boot records to mangled root directories. It can even reformat bad sectors and write back the old data.

Automatically.

In fact, if the Doctor can't cure your corrupted floppy or hard disk, then Buster, you've got one corrupt disk.

In which case, you'll need to refer to *The Norton Troubleshooter*, a 158-page guide to finding and fixing most anything that could go wrong.

Don't worry, you don't have to go to the bookstore or the library to refer to it, because the Troubleshooter is included in the Advanced Edition.

Frankly, the Norton Disk Doctor and the Norton Troubleshooter are worth the price of the new Advanced Edition all by themselves.

But, of course, they aren't by themselves.

They're accompanied by a wish list of features, functions and enhancements sufficient to satisfy the yearnings of all those people who've been politely writing and calling to request them.

The people's choices.

Like *Speed Disk*, the world's most powerful disk tuning tool, which features four user-selectable optimization methods and doesn't lose your data if you lose power.

And *Format Recover*, which can unformat your accidentally reformatted hard disk even if you haven't taken any precautions beforehand.

Our user interface, which *InfoWorld* said made the Utilities "as easy to use as possible," now comes with pop-up windows and dialog boxes.

Our new *Norton Control Center* lets you define or alter a range of system settings—from cursor size to screen and palette colors—quickly and easily.

While our *Disk Test* finds and marks faulty areas on your disk to help you protect your data before you have a chance to lose it.

If you want to lose it, however, you'll be glad to know that *WipeFile* and

WipeDisk support DoD 5220.22-M 116c(6b), the Pentagon's latest data security specification.

Which means they'll erase your files so thoroughly not even Peter Norton can find them.

Accounting Software So Sophisticated It Even Lets You Multiply.

Small business will get off to a jackrabbit start with ACCPAC® Easy!

As your business grows by leaps and bounds, move up to ACCPAC BPI®

Even the most sophisticated breed of business is handled by ACCPAC® Plus.

The simple truth is, the business of business is to grow. The sad truth is, most accounting software can't handle that. Built-in obsolescence seems to be a standard feature.

Which is one of the most compelling reasons to consider the ACCPAC® line. Because it is precisely that: a line. A smooth, efficient path for expansion. Allowing you to transfer data when you trade up.

The starting point is ACCPAC Easy, our primer. Offering "excellent audit trail features," according to *Software Digest*.

And here's where you trade up to: our five module workhorse, BPI Accounting. *PC World* calls BPI "an outstanding value."

Finally, our powerhouse, ACCPAC Plus offers predesigned, off-the-shelf solutions for a wide variety of businesses. Rated "best in its class" by *InfoWorld*, Plus offers the ultimate in control.

And we offer even more.

Like significant rebates for the ACCPAC software you already own. And the stability and support that come from the world's leading independent software company.

Call 1-800-531-5236. In Canada call 1-800-663-6904.

We'll tell you more about ACCPAC, our rebate program and what we can do for your business. Namely, help it grow.

The new Epson LX-810

The new Epson LQ-510

This is one of the easiest decisions you will ever make. Introducing the near letter quality LX-810 and letter quality LQ-510 from Epson.

To begin with, the inexpensive LX-810 is the most full-featured printer in its class—perfect for printing everything from term papers to personal finances. The LQ-510 is Epson's most affordable letter quality printer. Producing crisp, dark text and graphics, it lends a more professional look to any printed page.

Each offers features ordinarily reserved for more expensive printers. For example, Epson's advanced SmartPark™ paper handling lets you change between different types of paper almost instantly. The convenient SelecType panel makes for one-touch selection of typesets, pitch and print modes.

Most important, both models are backed by two decades of Epson reliability, quality and value. Coming from the world's #1 printer company, that means a great deal.

WINDOWS JOURNAL

First-hand dispatches from the Windows front

This month Stewart Alsop shares some ruminations on a theme: What's missing from Windows?

Stewart Alsop

Now that the word's out in the public relations world that I'm writing about *Windows*, I've got some serious software sitting on my hard disk. I've got four drawing programs (*Arts & Letters*, *Corel Draw*, *Designer 2.0*, and *Opus I*), one paint program (*PC Paintbrush IV*), one data base (*Quartz*), one word processor (*Ami*), one spreadsheet (*Excel*), two desktop publishing packages (*PageMaker* and *db Publisher*), and a variety of utilities (most notably *Scrapbook +*). I really have to fall back on only two character-based programs, both communications related (*Prodigy* and *cc:Mail*), to get my work done.

But I have this nagging feeling that something is missing. And it's taken me a couple of weeks to nail down what that something is: choice.

A Bit of History

Let me explain. Back in 1985, when the Macintosh was a machine in trouble and the professional soothsayers of the computer industry were climbing over each other to say the Macintosh was dead, people who actually used the machine knew that it would not only survive but prosper. A lot of this feeling came from the trickle of software that had just begun to appear. *PageMaker* showed up in May or June (not to mention *MacPublisher* and *ReadySetGo*); *Excel* in September (not to mention *Jazz* and *Crunch*); *FileMaker* in March (not to mention *OverVue*, *Helix*, and *pfs:file*). The Macintosh user was still stuck with *MacWrite* or *Microsoft Word* for word processing, but in almost every other category, there was a choice among three or more programs with real differences in design and with distinct features appealing to different kinds of users.

When There's a Hole...

All of this happened about 18 months after the Macintosh itself was introduced. Here we are,

mid-1989, three and a half years after *Windows*' original version shipped. This is the year (like 1986 was for the Macintosh) that Microsoft predicts *Windows* will become a clear hit and gain widespread software support and sales momentum. But the only category of applications where I have a serious choice between programs with significantly different capabilities is vector drawing.

Even more disturbing, I haven't seen any explosion in shareware or public-domain software to fill in the gaps. For instance, I would love a little program to map out memory usage so I know how much program code is being swapped to expanded memory or to disk. (That way I could optimize the performance of the machine by keeping an eye on my use of memory.) But I don't. The reason? People who write shareware programs are still working with plain DOS, not with *Windows*.

Windows represents the next-generation operating environment for so-called IBM-compatible computing. And there's no dearth of leading-edge software development for *Windows*. A company called Manageware has developed a five-dimensional spreadsheet that runs under *Windows* and lets you rotate models from five points of view while still using the familiar row-and-column metaphor. Another (continues)

You're looking for a specific piece of information on your PC. But you can't remember which memo, spreadsheet or even which file it's contained in.

And you're certainly not about to

search through each directory, much less load and unload every file to find it.

That's why we created Magellan®. The first utility that helps you find your files by letting you instantly see their contents as

Hard disk because at you're looking for?

they appear in your favorite applications.

Without even having to load the specific applications that created the file.

With Magellan, all you need is a general idea of what you're looking for.

Because unlike other programs, the Magellan Explore function can perform a search on a phrase, a topic, an idea or even an entire file. Not just key words.

Then it lists your "found" files on the left of your screen in order of how relevant the contents are to the search topic.

As fast as you can scroll down this list, the Magellan SpeedView function instantly displays the complete contents of each file on the right of your screen, highlighting the relevant text for you.

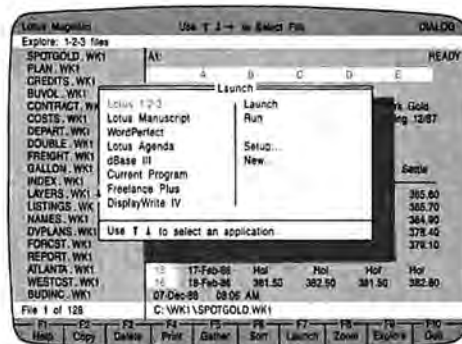

Using the information is easiest of all. Because all it takes is one keystroke to launch into the application that created the file, and it'll be loaded and ready to go.

Or you could use Magellan to gather the

information you choose from several different applications (like a 1-2-3[®] spreadsheet and a WordPerfect[®] memo)¹ and put it into a single file so you can start using it right away.

Best of all, you're productive literally

five minutes after installing Magellan. The menus are intuitive, and everything you need to run the program is on the screen right

With one keystroke, Magellan loads the selected file and application, in this case 1-2-3, so you're ready to go to work.

in front of you. Which means that there is virtually no learning curve.

Call 1-800-345-1043 for your free Magellan demo kit. Ask for ANZ-3593 to learn more on why Magellan is the quickest, easiest way to access all the information on your hard disk.

That way, you can spend time working with information, instead of just looking for it on your PC.

company, Multex, is creating an application for brokers that integrates data from up to 12 different sources into an environment where brokers can use familiar tools to massage the information. And both American Airlines and United Airlines appear to have standardized on *Windows* as the interface for their agents' workstations.

Fill It

So what do we need in the world of *Windows*? I think we need missionary fervor, the very thing that everybody laughed at Steve Jobs for when he called the Macintosh "insanely great!" But the fact is that the industry's so-called religious nuts motivated a lot of interesting, leading-edge experimentation in the design and development of application software. Indeed, one area of exploration—user programming—led to the development of a program called *HyperCard*, which was delivered as an extension to the Macintosh operating system in 1987. Only now is it being matched under *Windows*, with forthcoming *HyperCard*-style work-alikes from Asymetrix and Spinnaker Software.

That's what bugs me most about *Windows*. Virtually everything it does was done two years ago on the Macintosh. The *Windows* programs that really break new ground (and there are a few of them) are still under development and won't reach the marketplace until late this year or early next year.

CAN YOU SPOT THE \$700 DIFFERENCE?

One of the nearly identical samples you see above was printed with the HP Laserjet Series II. The other is from the Mannesmann Tally® MT905. Both are reprinted here exactly as they came out of the printers.

But what might surprise you is the rather dramatic difference in the manufacturers' suggested retail prices.

The Mannesmann Tally laser is \$700 less. Yet it offers the same high quality output, lowers operating costs 25 percent, and prints at six pages per minute.

The MT905 comes with the same resident type fonts as HP, accepts standard HP font cartridges, and lets you choose optional memory upgrades from one to four megabytes.

MT905 Specifications

- Technology: scanning laser.
- Print Speed: 6-pages per minute.
- Resolution: 300 x 300 dpi.
- Emulations: HP Series-II. [optional emulations: Epson®, IBM® Proprinter, & Diablo 630.]
- Standard I/Os: Serial & parallel.
- Memory: 512K. [upgrades: 1, 2, & 4 megabytes.]
- Typefaces: Courier medium & bold, line printer, accepts standard HP font cartridges or any downloadable font in HP-format, 6-resident fonts + 2 font cartridge slots.
- Paper Handling: 150-sheet input & output bins. Manual feed handles single sheets, envelopes, transparencies, and labels.
- Workload: 4,000 pages-per-month.
- Suggested Retail: \$1,995.

For more convenient paper handling, the universal paper cassette holds letter, legal, and international sizes, plus up to 15 standard envelopes. You can choose face-down output to keep long documents in the right order. And the manual feed lets you print labels or transparencies.

So any way you figure, the answer still comes up the same. The Mannesmann Tally laser looks perfect. And so does the price.

If I were a rational and mostly normal user of computers, I'd never learn an entirely new system and buy new software unless I knew I could get the specific programs I absolutely had to have, and thought that I was buying into a robust and exciting new world of experimentation and development. If I were going to expose myself to the risk of a new environment, I'd want to know that a lot of people out there felt very strongly about that environment.

A Moving Target

I'd like to see fewer developers getting out their calculators to see how many copies of a program they might sell if they reached *x* percent of all *Windows* users. The developers who have done the best work under *Windows*—at companies like Premise Software, Asymetrix, and Micrografx—say it's an incredible pain to write software for *Windows* and wish it weren't quite such a moving target, with basic concepts changing between each major version. Instead, I'd like to see developers drooling over the chance to use this environment to solve problems and amaze the industry with their technical and programming virtuosity. Then perhaps there wouldn't be so much confusion about *Windows*' role in the industry. ●

MultiModemV32™ Full Duplex Modem **Both 9600/4800 and 2400/1200/300 bits per second**

Until today, your choices in V.32 9600 bps full duplex modems have been limited. They've been oversized and overpriced, and they couldn't even communicate with 2400 & 1200 bps modems.

Well, that's no longer the case! Multi-Tech's new **MultiModemV32** breaks through those barriers and more.

The **MultiModemV32** gives you 9600 bps full duplex operation with 4800 bps fallback, over both dial-up and leased lines, just like a CCITT V.32 compatible modem should.

However, the most remarkable thing about the **MultiModemV32** is its ability to perform automatic speed detection and switching between 9600, 4800, 2400, 1200 and 300 bps. This allows the modem to automatically match on-line speeds with other V.32, V.22bis and 212A compatible modems.

But that's not all.

The **MultiModemV32** incorporates MNP® Class 3 & 4 Error Correction and Class 5 Data

Compression with Speed Conversion. This gives you error-free communications, with throughputs well in excess of 9600 bps. Add to that a full "AT" command set, auto-dial/ auto-answer, and a memory for phone numbers and option setting, and you get a modem with true upward and downward compatibility, that can satisfy most any application*, at a most affordable price.

Why not unplug your older, slower modems? Plug in the new **MultiModemV32**.

All things considered, the **MultiModemV32** is clearly the Right Answer.

OUR SILENTWRITER IS CREATING HEADLINES ON SEVERAL FRONTS.

Our Silentwriter™ LC890 is the first desktop publishing printer that gives you both popular standards for creating graphics and type: true Adobe PostScript® and LaserJet Plus emulation.

That alone would be enough to cause headlines. But we also added many more features to simplify desktop publishing. Like both Apple and IBM compatibility. *PC Week* stated, "the LC890 is actually better than having both an Apple LaserWriter Plus and an HP LaserJet Plus on your desk." Equally impressed, *PC Magazine* awarded it an "Editor's Choice." And cited it in their "Best of 1987" issue.

And because the Silentwriter has a simple,

trouble-free printing mechanism, it will be creating headlines for years to come. In fact, it's twice as reliable as ordinary lasers, with an average life of 600,000 pages.

If you don't require the power of our LC890, consider the LC860 Plus for text and less complex graphics.

Throughput Seen as Key

Vendors Draw Battle Lines for SQL Data Base Servers

Migration Costs May Deter Users

Fox's David Fulton sees a need for data base server software that's as easy to install as a math chip.

When the guest list includes IBM, Microsoft, Ashton-Tate, Oracle, Novell, Borland, and other top software names, you know the party will be hot. The theme is SQL-oriented data base servers, and before it's over there'll be a rumble.

The idea is to create a multiuser data manager that's designed for top performance and distributed processing on a network. You load the server with transactional processing smarts to make it a flexible, cost-effective alternative to minicomputers and mainframes for complex, mission-critical data base operations.

Unlike a traditional multiuser data manager,

which performs processing on networked PCs while the server just stores files, a SQL server exploits the client/server architecture to spread work around. Rather than downloading an entire data base, a client PC asks for specific tables and rows, leaving most indexing and sorting chores to the server. This reduces network traffic and frees up the PC front end for querying and reporting.

Additionally, because servers and front ends speak a common SQL (Structured Query Language) also shared by mainframe and mini data bases, users should be able to issue SQL queries (usually translated from

an existing PC data base language) without knowing where the data resides; answers may return from the local server or a distant mainframe.

Almost every major data management player has announced a SQL data base server or a compatible front end, several of which have already ar-

rived. Gupta's *SQLBase*, which runs on both DOS and OS/2 platforms, was first out of the chute in 1986. *SQLBase* was recently joined by Novell's *NetWare SQL*, which works with DOS workstations and Novell's *NetWare* software, and by XDB's DOS-based *XDB Server*. (continues next page)

Focus on Markets Pays Off for Zenith Data

Driving Laptops Into Retail Stores

Best known for heavy-weight government contracts and lightweight portables, Zenith Data Systems quietly makes a striking claim—last year it shipped more DOS-based PCs worldwide than anyone but IBM.

Tandy disputes that claim, and ZDS doesn't loom large if you wander into most computer outlets. StoreBoard figures show ZDS taking only 1.6 percent of U.S. retail sales. But the Glenview, Illinois-based ZDS and other Zenith Electronics subsidiaries sold almost \$1.4 billion of PC products last year. And Dataquest puts ZDS's share of U.S. personal computer sales (DOS machines and otherwise) at a respectable 3.5 percent.

Zenith Electronics formed ZDS in 1980, soon after acquiring Heath, a personal computer kit pi-

oneer. By the time the first ZDS system appeared in 1982, almost all of the current top executives had joined. Late that year when ZDS decided to take the IBM-compatible (continues on page 66)

Sales Climb for Zenith

Zenith Electronics' sales of computer products, primarily by its Zenith Data Systems subsidiary, have grown quickly.

SQL Servers

(continued)

An Oracle server for Banyan's UNIX-based *Vines* net was slated for spring delivery.

Others, however, see OS/2-based servers as the future. *SQL Server*, developed by Microsoft, Sybase, and Ashton-Tate and now expected to ship by mid-year, has already attracted numerous front-end supporters. By year-end, expect OS/2 servers from IBM, Oracle, Microrim, and possibly Lotus.

If the server market seems crowded, the front-end market resembles a full-blown riot. Ashton-Tate's *dBASE IV* will support *SQL Server*. Borland's *Paradox* will talk to *SQL Server*, IBM's OS/2 Extended Edition data base server, *NetWare SQL*, and *Oracle Server*. WordTech's *dBXL* and *Quicksilver* will query Oracle, Novell, and Gupta servers. *DataEase* will work with IBM and Microsoft products. Microrim has set off on its own with its *Atlas* enterprisewide net, promising both a server and a graphics-based front end. Lotus hasn't clarified its server strategy, but outsiders expect a cooperative development/marketing arrangement with Oracle in which Lotus concentrates on the front ends. And Fox Software will offer a *FoxServer* back end based on *NetWare SQL* in the first quarter of 1990, along with a corresponding front end for its upcoming *FoxPro* data manager.

For packages ported from existing multiuser PC data bases, perfor-

mance will be a key issue. Yet it's unlikely that smaller nets will see the dramatic speedups that large nets can expect. If so, the hefty investment in rewriting applications, buying a multimegabyte dedicated server, and (in most cases) moving up to OS/2 and a new net operating system might not pay off.

"The migration costs are high," says Lee Doyle, a network analyst at International Data Corporation in Framingham, Massachusetts. Further,

administration will grow much more complex and time-consuming. "Small work groups will find some performance improvement, but is it worth the increased hassle? Probably not." Additionally, server products won't appear soon at your typical ComputerLand, because they'll be tough to sell and support.

Until developers learn how to tap the servers' complex data integrity controls and distributed processing, "there's only one reason to buy a data base server—to enhance

performance," says David Fulton, president of Fox Software. Fulton suggests that some server offerings are too complex for most PC net environments. "You should be able to drop a server into a network like you'd put a math chip into a PC."

"The traditional file server approach is far from dead," adds Richard Schwartz, Borland's chief technical officer, who calls for an approach that combines the best of both technologies. —Eric Brown

486 Chip Pushes Envelope

Intel Stresses 386 Compatibility

PCs built around Intel's 1.2-million-transistor processor will begin appearing in late 1989 or early 1990.

Buy now and realize immediate productivity gains, or wait a year for the next chip generation that will make today's offerings obsolete: That's the conundrum PC buyers have faced ever since micros were introduced.

But Intel's powerful new i486 processor breaks that cycle and brings much greater functionali-

ty without abandoning its predecessor, the 80386. A more complete processor system than earlier designs, the i486 integrates many coprocessing enhancements formerly provided by discrete components at extra cost, enabling it to work two to four times as fast as the 386. Equally important,

the i486 shows that the industry's prime CPU supplier has finally settled on a single processor platform.

In fact, the i486 should be seen as part of the 386 family rather than as a next-generation chip, points out Claude Leglise, marketing director. Based on a superset of the 386 architecture, it maintains complete binary compatibility with current applications written under DOS, OS/2, and UNIX. Like the 386, the i486 offers 32-bit memory addressability plus built-in capabilities to protect multiple applications from bumping into each other and to run multiple virtual 8086 machines.

Like the i860, Intel's recently announced Reduced Instruction Set Computer (RISC) chip, the i486 features next-generation silicon technology and houses 1.2 million transistors—compared to 275,000 on the 80386. Intel also has added an 8K read/write cache, an 82385-compatible cache (continues on page 68)

There's a lot to a business, and it's tough to know where all of it is, all of the time.

That is, unless you have the Database Accounting Library™ from SBT.

It offers a Business Status Report that is a complete control panel for your business.

A set of instruments that gives you up-to-the-second status on what you're selling and what you're buying. On what you owe and what you're owed. Right up to the last item entered.

Which means you know virtually everything about where your business is, right now. And with a single keystroke you can project those current results to the end of the month. So you can decide when to trim and when to spend.

We also provide 15 different accounting modules to choose from. That means your business gets exactly the applications it needs, and only those it needs.

Modules start at just \$295, run on all popular computers and multi-user environments, and come with an unprecedented five year warranty.

So at 11:05, or any other time of the day, the SBT Database Accounting Library can help you know exactly where your business is.

Zenith

route, it picked targets that became its strongholds: the Fortune 1000, colleges, and the federal government.

Quickly tackling corporate America with a direct sales force, "we garnered some fairly good market share right out of the gate," President John Frank says. When corporations began to buy systems complete with accessories like network adapters and tape backups, Zenith was ready to offer all those products and began shifting delivery to the dealer channel, which now handles almost all corporate customers.

In the federal arena, Zenith soon became the largest supplier of PCs, with well over 300,000 PCs sold to the Air Force. Early this year that contract expired, and Zenith expects its government business to drop in 1989 by more than \$200 million, although it's bidding on the follow-up.

No PC supplier dominated college campuses when Zenith entered, and that segment has been very successful for the company. Not only do 12 million students attend U.S. colleges, each year a quarter of them are new students, remarks Andy Czernek, vice president for product marketing.

As it pushed into these markets, Zenith also chalked up some product firsts, ranging from a zero-wait-state PC to the first non-IBM VGA and OS/2 offerings. But its most striking achievements came in battery-

Andy Czernek and John Frank have guarded Zenith's strongholds in corporations, government, and colleges.

powered laptops, whose crisp displays and clever power-saving tricks won shelf space at major computer chains and helped ZDS push up retail revenues 46 percent last year.

Laptop sales can only grow, Czernek declares. "By the year 2000, 80 percent of PCs will be battery powered—it's guaranteed." Low-power

technology has advanced to the point that "we can run anything on 17 watts, so you get 3 hours of life from a 50-watt battery."

Zenith also is pushing into two other major niches. In February a work-group products venture kicked off with the Z-1000, a UNIX machine built on multiple 386 chips and aimed at network

server and multiuser roles. And sales are growing for the patented flat tension mask (FTM) monitor, which Czernek calls "the only cost-effective way to get past 1024 by 768 resolution." FTM is also a key ingredient for the Zenith Electronics/AT&T cooperative venture for high-definition TV.

The last major U.S. TV manufacturer, Zenith Electronics has struggled for profits in recent years. "For five years, ZDS has been its salvation," says Merrill Lynch analyst Charles Ryan. But this year the consumer products group should post a modest profit. As for ZDS, with the dropping government sales, "they do have a challenge," Ryan remarks. But if Zenith holds on to its share of laptop and 386 sales, he says, those should compensate. —Eric Bender

IBM, Intel Jointly Push Multimedia Presentations

DVI Boards to Cost \$1000 by 1991

Apple Computer has grabbed headlines with Macintosh multimedia applications, but PCs soon will offer a much more powerful and cost-effective presentation alternative. Digital Video Interactive, Intel's scheme for running multimedia applications, received a huge boost this spring when IBM agreed to jointly develop and market the technology.

DVI will squeeze full-motion video (up to an hour of better-than-VCR

quality), audio, images, and computer animation onto a CD ROM disk. An all-digital approach, DVI avoids the clumsiness inherent in trying to manipulate analog data (like video from a laser videodisk). And presentation will be cheaper because DVI doesn't require a separate video monitor.

This month Intel and IBM will ship a \$21,500 development system that handles everything up to

the final data-compression processing and creation of the CD disk. A corresponding presentation system will ship by year-end for something like \$9000, estimates Bob Brannon, manager of Intel's DVI group in Princeton, New Jersey. Single-board versions for ATs and PS/2s are expected early next year. Pricing can't yet be estimated, because of volatile costs for video RAM chips. But a third round of silicon, available in boards in the second half of 1990, probably will drop add-in prices below \$1000.

At the same time, the partners will polish and broaden a suite of development tools, says Terry (continues next page)

A Few Words From The World's Most Celebrated Graphics Software.

Thank you. For those of you who haven't heard, Harvard Graphics from Software Publishing has gotten a lot of recognition from the trade press. Why, you may ask? Certainly our crisp, high-speed output helped influence InfoWorld readers to name us Product of the Year. And the easy access to so many chart and graphing options must have helped PC World's audience give us their World Class Award for

the second year running.

Actually it must have been all those things and more. Otherwise why would PC Magazine call Harvard Graphics "the de facto standard" software for business graphics?

Of course, the experts aren't the only ones who favor Harvard Graphics. In fact, with its growing popularity, Harvard Graphics has become the number-one selling business graphics software.

And naturally we'd like to invite those of you who haven't tried Harvard Graphics to call us for a free trial disk at the toll-free number below.

In a matter of minutes, it'll give you a vivid demonstration of the qualities that make us the graphics superpower.

Rogers, IBM multimedia product development director in White Plains, New York. These will range from hardware device drivers to an easy-to-use authoring environment designed "to give a relatively simple, preferably graphical metaphor for organizing a presentation, then give access to the various levels of video and audio clips," Rogers says. The environment's all-digital flexibility will streamline the creation of interactive applications.

Currently DVI runs under DOS, but the technology is likely to extend to OS/2 and UNIX within two years. Additionally, IBM and Microsoft have announced cooperative work on multimedia, starting with a CD ROM audio standard and evolving to an integrated DVI environment.

Despite IBM's leading role, "DVI will be a commodity product, and everyone will get a shot at it," Brannon says. But will it dominate desktop multimedia?

Apple hasn't disclosed any plans for digital multimedia and seems to be waiting for erasable CD ROM, high-speed fiber-optic communications, and other forms of technical support to take hold before building an integrated networked multimedia computer, adds Brannon. However, that may delay commercialization until the mid-1990s.

Another contender is Compact Disk Interactive (CD-I), but Philips and Sony bypassed the PC and "purposefully backed

Digital Video Interactive applications like DuPont's truck-driver simulator can exploit full-motion video.

themselves into a corner," Brannon says. "From the PC point of view, it's not a competing technology."

While workstations from Next and Sun tout

their multimedia capabilities, Brannon points out that "they're not aimed at video, and video-signal processing is a very special field." Greater compe-

controller, a paging memory-management unit, and a floating-point coprocessor that's compatible with the 80387 math coprocessor. Putting these formerly discrete components on board reduces the lag involved with interchip communications. And, depending on the application, on-chip caching eliminates the processor's need to go to external memory 95 percent of the time.

The i486 also incorporates RISC techniques for commonly used instructions, which therefore execute more quickly than on 386 and 387 processors. For example, on the 386, a load operation takes four clock cycles and a store takes two, while either instruction re-

quires only one tick on the i486. Leglise maintains that the i486 can match the Sun Microsystems SPARC or Motorola 88000 RISC chip running at the same speed.

Additionally, the i486 is optimized for managing multiple application "threads" from multiple processors, boosting multiprocessor machines like Zenith's Z-1000 UNIX box. OS/2 doesn't yet support this kind of multiprocessing. But Michael Slater, editor of the *Microprocessor Report*, expects to see suitable i486-specific OS/2 and Windows implementations in the not-too-distant future.

Despite these additions, the i486 can be easily integrated into 386 systems. Once a prototype

tition may loom from Japanese electronics giants.

But multimedia demands not just a host of tricky technical components but also a balanced way to combine them. "If you successfully develop a super compression algorithm but don't have all the support pieces, it's not much use," Brannon says. "DVI will have the playing field to itself for the next 24 to 36 months.

"Application developers will charge down the obvious paths—business training, simulation, point of sale," Brannon suggests. "But somebody's going to think of something really clever, à la VisiCalc, and we're all going to say, 'Why didn't we think of that?'" —Eric Bender

chip arrived, "we had it up and running within 3 hours," says James Canavino, head of IBM's Entry Systems Division.

With system prices expected to start between \$10,000 and \$15,000, the i486 won't be for everyone. Of course, that's what we heard when the 286 and 386 appeared, and they penetrated the market with striking speed. But the i486 is likely to settle in at a slower pace, if only because Intel now offers 32-bit processors for most budgets—including the low-end 386SX and a range of 386 models. And software vendors have been slow to exploit 32-bit systems. —Mike Hogan

We Interrupt The War For This Im

To all those unlucky enough to be stuck smack in the middle of the current spreadsheet confusion, take heart.

There is, at last, a viable alternative to war: revolution.

One that delivers even more performance than you have (ahem) been waiting for, but without demanding expensive new hardware or extensive retraining. And without abruptly cutting you off from any user in your company, even those on mainframes.

The name of the spreadsheet is SuperCalc®5.

And what it can do for you is, frankly, quite revolutionary.

Let's begin at the end. Stand-alone quality

Offering hundreds of presentation treatments from word charts to three-dimensional bar, pie, scatter, and polar graphs.

Pascal Gets Two Object Lessons

Borland's updated Turbo Pascal squares off against
a new contender—

Microsoft's QuickPascal.

More powerful than BASIC but easier to grasp than C, Pascal is the foundation of structured programming curricula the world over. For years, Borland's *Turbo Pascal* went unopposed in the low-cost Pascal programming arena, gathering a large and loyal following. Recently a challenger arrived, Microsoft's *QuickPascal 1.0*. But the fight won't be easy: *Turbo Pascal 5.5*, which appeared shortly after *QuickPascal*, may safeguard Borland's crown.

A prerelease version of *QuickPascal* contains

tured programming in the early 1970s, promises to help developers cope with increasingly complex software demands (see "The Object Is Software De-

sign" in "Special Report: Languages," PCW, April 1989).

But despite a superficial similarity, the compilers differ radically in how they implement objects. *QuickPascal's* object-oriented extensions are patterned after Apple's Object Pascal, in which all objects are addressed by pointers and are created and destroyed using the New and Dispose procedures. This means that *QuickPascal* objects employ *virtual*, as opposed to *static*, methods (the procedures and

functions that objects know how to perform). Virtual methods are a powerful cornerstone of OOP, but they require more memory and can reduce program speed.

Turbo Pascal 5.5 takes a different path, borrowing concepts from another popular object-oriented language, C++. You can employ virtual methods, static methods, or a combination of the two. New *constructor* and *destructor* methods automate virtual-method house-keeping chores. Replacing inherited methods with local versions doesn't require Object Pascal's *OVERRIDE* keyword, and static methods can have parameter lists different from their ancestors'. In addition, objects may be created as vari-

ables or addressed by pointers with the help of extended versions of New and Dispose.

QuickPascal:

Compatibility Concerns

Microsoft's upstart compiler beckons to the legions of *Turbo Pascal* programmers with a promise of compatibility. But while *QuickPascal* easily handles most *Turbo Pascal* commands, some pitfalls remain. *QuickPascal* lacks a unit (submodule) overlay manager for swapping program segments in from disk—a prized feature of *Turbo Pascal 5.0* and *5.5*. Moreover, the beta compiler balks when more than two units refer to each other in circular fashion, and it can't execute Borland Graphics Interface (BGI) routines on some EGA adapters. Microsoft claims that those last two

limitations will be overcome in the shipping version.

To its credit, *QuickPascal* offers a well-designed, mouse-aware interface that allows nine tiled or overlapping windows. The reprogrammable text editor highlights Pascal keywords as you type them, but unlike *QuickBASIC's* editor, it doesn't check syntax.

Polishing Turbo Pascal

Besides OOP, several features set *Turbo Pascal 5.5* apart from previous versions and make the upgrade worthwhile even to the OOP-indifferent. An improved overlay memory manager can now be fine-tuned to improve performance, and the smart linker can strip unused

methods from objects while deleting unreferenced code from compiled output. Compiler output speed is boosted by 10 percent over previous versions.

As good as it is, *Turbo Pascal* still isn't perfect. Limited to opening one mouseless window at a time, its once innovative interface seems in danger of slipping behind the times.

Both Borland's upgraded *Turbo Debugger 1.5* and *Turbo Pascal's* built-in debugger now recognize object ancestor-descendant relationships and can inspect object hierarchies. By contrast, Microsoft's *CodeView* debugger can't debug *Quick-Pascal* code.

Unchanged on the surface, *Turbo Pascal 5.5* is packed with extra speed, an improved overlay manager, and a built-in object-oriented debugger.

So overall, despite *QuickPascal's* object-oriented extensions and well-designed interface, the prompt appearance of *Turbo Pascal 5.5* will preclude a technical knockout in the first round. ●

Zenith Z-386/25

Lighting a Fire Under Your Desktop Applications

A 25-MHz 80386 processor is just the fire starter. If you want to blaze through CAD, multitasking, or multiuser applications, you'll also need plenty of 32-bit memory, high-performance memory caching, and a disk controller that won't dampen the fire. While you're at it, you might as well stoke the system with top-notch VGA video and a multitasking environment.

You could pull all this together by yourself, but Zenith's Z-386/25 does it for you. It ships with a minimum of 2MB of 32-bit memory on the motherboard, and you can add up to 8MB via 1MB memory modules, with another

24MB on the 32-bit memory bus.

Zenith's Superset Bus includes a generous complement of four 8/16/32-bit slots and three 8/16-bit slots. One 8/16-bit slot is devoted to the hard/floppy ESDI disk controller and another to video, and one 8/16/32-bit slot takes a special board with a system control processor, I/O controller, battery, and setup ROM. You can use any or all of the three remaining 8/16/32-bit slots for CPU-speed memory, putting up to 8MB of 2MB SIMMs in each for a system total of 32MB.

You'll be able to use 4MB memory modules when they become available, says Zenith. You can

also use the Superset slots for 25-MHz 32-bit memory or for other standard PC or AT cards running at 8 MHz. The Z-386/25 automatically adjusts I/O bus timing depending on whether there's a fast memory card or a slow peripheral card in a slot.

Performance gets a boost from 16K of 25ns zero-wait-state cache memory that employs a 16-level write technique (which writes 64 bytes before you incur a wait

state). Naturally, you'll need a disk drive that can keep pace with such fast company. Zenith includes ESDI drives with all its models, boasting a 10-mbps rate, average access times under 16ms, and 1:1 interleave controllers.

The controller can run two hard and two floppy drives. A 1.44MB, 3½-inch floppy comes standard, with room for three more 5¼- or 3½-inch half-height devices in the bays. You also get a socket for either an Intel 80387 or a Weitek coprocessor. Also standard: one parallel and two serial ports, a 101-key

Profitwise Basic Accounting

Four-Star Accounting Features—Affordable and Upgradable

In the days before Dac Software stormed the market with *DacEasy* at a what-have-you-got-to-lose price, accounting software required a much bigger commitment in dollars and time. Now it seems that everyone has a budget accountant, the latest being *Profitwise Basic Accounting*. It's a scaled-down version of TLB's *Solomon III*, which could run you more than \$10,000 complete with all modules.

The \$229 *Profitwise* competes directly with *DacEasy BonusPack* and *Peachtree Complete II*, both \$199. Modules include general ledger, payroll, accounts payable, accounts receivable, invoicing, fixed assets, and an address list manager for

the other modules. Also available in the *Profitwise* series for \$229 each are a report and graph-designer module and an inventory and job-costing module.

Profitwise offers an easy upgrade path to *Solomon III* with little additional training required, no need for file conversion, and a comparable password-protection scheme so that you can manage employee access to its menus on a need-to-know basis. *Profitwise* audit trails are also superior to those in other entry-level systems. Its logfile feature, which logs all keystrokes since the last backup, could be a lifesaver. (In the event of a system failure, *Profitwise* can reconstruct the data

Zenith's Z-386/25 offers up to 32MB of 32-bit memory, 16K of 25ns cache, and a choice of fast ESDI drives with 1:1 interleave controllers for your biggest computing jobs.

DaynaNet

Low-Cost LANs—Now You Can Have Your Server and Afford It, Too

Wherever PCs talk, so does money. And PC users have gotten the word that distributed networks like *TOPS* (which don't require a dedicated PC for a file server) enjoy a cost advantage over most server-based local area nets. But Dayna Communications argues that a LAN doesn't have to be distributed to be inexpensive, and its *DaynaNet* operating system makes a good case for a server-based, entry-level net solution.

Dayna helped Novell add Macintosh support to *NetWare*, and *DaynaNet* looks very much like a

trimmed-down version of *NetWare*, with many of the features of the popular and costlier Novell product. But along with the lower price comes a shorter list of supported network topologies. *DaynaNet* is tailored specifically for low-speed Apple LocalTalk, Farallon PhoneNet, and compatible nets, although it also accepts ethernet hookups.

One of its biggest advantages over distributed nets is centralized file storage, which eliminates that nagging problem of files being out of reach when the machine on which they are stored is

DaynaNet combines the central file management convenience of a server-based net with the low price typical of distributed networks.

base to the point of failure using the last backup and the current logfile.)

Like *Solomon III*, *Profitwise* can print any report to disk that it can print to a printer, allowing you to use a spreadsheet to report and analyze data generated by *Profitwise* (although it can't import spreadsheet data). And the program has a high-end look and feel, with conveniences like the ability to reference all general ledger account numbers and their definitions with a function key whenever you enter data.

But on the other side of the ledger, it seems as though TLB balked at making *Profitwise* too powerful for fear it might

compete against its flagship, *Solomon III*. The former's limit of 10 departmental subaccounts seems arbitrary when compared to *Peachtree's* 99 and *Solomon III's* unlimited number. *Profitwise* allows just 10 user-defined reports in its General Ledger module, while *Peachtree* and *Solomon III* have no limits. And *Profitwise* limits total data base size to 4MB, while *DacEasy*, *Peachtree*, and *Solomon III* are limited only by hard disk capacity.

It would be nice to have a purchasing module, which *DacEasy* contains and which many companies will miss. Worse, you can't enter paid invoices in one operation, a capability *Solomon III*, *Peachtree*, *DacEasy*, and others provide. Instead, you must enter paid invoices in ac-

counts payable and then "pay" these invoices by printing checks on plain paper, needlessly complicating a simple and frequent activity.

At \$687 for all the modules, *Profitwise* is roughly twice the price of a comparably configured *Dac* or *Peachtree* system. But on the whole, it offers a higher level of functionality. For example, the *Profitwise* general ledger allows you to post adjustments to both prior and future periods, a feature the others lack.

The accounting system requires DOS 3.1 or a later version, 640K, and a hard disk with 10MB free. TLB Inc., 1218 Commerce Pkwy., P.O. Box 414, Findlay, OH 45839; 800/777-0521, 419/424-0422. —Charles Kyd

MicroFrame 386CT

A 386 You Can Build for Yourself

Tired of waiting for your AT to crawl through desktop publishing projects or massage mega-worksheets and data bases? The MicroFrame 386CT cuts out wait states and gives top PC performance sans the cost of an 80386 machine—if you don't mind transplanting a motherboard.

The 386CT is a 32-bit AT motherboard replacement that you can buy with a 20-MHz or 25-MHz Intel 80386 processor and 1MB to 8MB of zero-wait-state memory. A Chips and Technologies 82C307 cache/memory controller is standard. Like many other 386 motherboards, the 386CT has separate 32-bit memory and input/output buses, enabling memory cards in the two 32-bit slots to run full tilt at the CPU's clock speed while the expansion bus's six 8/16-bit slots keep a steady pace with standard 8-MHz peripherals. If your boards are designed for faster speeds, the programmable expansion slots handle up to 10 MHz with the 20-MHz processor, and 12.5 MHz

with the 25-MHz chip. You also can use one or both of the 32-bit slots for AT-compatible boards.

The MicroFrame 386CT has a few other speed tricks up its sleeve. A 32K static RAM cache beefs up system performance by reducing the time needed for memory access and code execution.

The MicroFrame 386CT comes tailor-made for a standard AT chassis, but its baby-AT form factor (8½ by 13 inches) also makes it suitable for small-footprint ATs, portables, and some laptop models. Other features include an on-board clock/calendar and a socket for either the Intel 80387 or the Weitek 3167 math coprocessor.

The MicroFrame 386CT 25-MHz motherboard with 1MB of 32-bit RAM lists for \$2825. The 20-MHz 386CT with 1MB of 32-bit RAM costs \$2295. Monolithic Systems, 7050 S. Tucson Way, Englewood, CO 80112; 303/790-7400. —Wes Nihei

Midlevel Information Manager

A lot of us live somewhere between *MemoryMate* and Lotus's *Agenda*. We have more notes, appointments, and projects than a simple organizer like *MemoryMate* can handle. But we hesitate to take the time required to master a full-fledged personal information manager (PIM).

Arriba lives where we do. This midlevel PIM from Good Software gives up some of *Agenda*'s more intelligent attributes

while providing ready-made applications to get you started quickly.

The program organizes data by folders, which contain groups of notes or sometimes more folders. You can enter information as free-form text; at other times you'll find *Arriba*'s customizable forms handy for entering information like phone numbers. ProCollection, Type Director

LaserJet Fonts—Desktop Publishing From Easy to Elegant

Hewlett-Packard has unleashed a flurry of fonts for its LaserJet printers, in both cartridge and soft font form.

Fonts from several popular packages have been consolidated into a cartridge that Hewlett-Packard calls the ProCollection. Compatible with all LaserJet printers, the \$300 ProCollection is for those with basic office printing needs who don't want to get into downloading soft fonts or swapping font cartridges. The cartridge contains 65 commonly used fixed-pitch and proportional fonts in both landscape and portrait modes. Font families culled from HP's cartridge catalog include Courier, Prestige Elite,

Letter Gothic, Line Printer, TmsRmn, and Helv in point sizes from 3.6 to 14.

Additionally, HP joined forces with typesetting heavyweight Agfa Compugraphic to expand its soft-font family via *Type Director*, a menu-driven utility that creates scalable typefaces for LaserJet printers.

If you have the time and inclination to thoroughly polish your output, you can tap *Type Director* and get PostScript printer-like font flexibility without the investment in hardware. Based on Compugraphic's Intellifont scaling technology, *Type Director* lets you scale typefaces from 4 point ($\frac{1}{6}$ inch) to 200 point (2 inches) in half-

point increments and then create and download soft fonts to all LaserJet printers that accept them—the LaserJet Plus, 500 Plus, Series II, and Series IID. *Type Director* also provides an on-line tutorial and help screens.

In addition to printer fonts, *Type Director* generates screen fonts to support WYSIWYG features of software programs such as *PageMaker* and *Ventura Publisher*.

Currently three soft font sets are available from HP: CG Times and Univers 1 come in regular, bold, italic, and bold italic styles; the third set, Decorative 1, includes Brush, Uncial, Dom Casual, and Park Avenue. Each typeface contains 585 charac-

ters that can be combined into 14 different symbol sets for English and European-language special character needs. HP plans to make more of Compugraphic's extensive typeface library available in future releases.

You may already enjoy an extensive soft font library; *Type Director* lets you mix and match its fonts with all HP soft fonts and those from Bitstream's *Fontware*. Currently, *Microsoft Word* (continues)

folders containing a keyword or phrase. If you prefer, you can generate an outline of notes and folders. If you still haven't found what you need, you can browse through all notes and folders.

Arriba can't automatically index material by preselected keywords, as *Agenda* does. Nor can it translate terms like *tomorrow* into the proper date, as *Agenda*'s intelligent scheduler can.

What you do get, though, are built-in applications for handling to-do lists, expense accounts, appointments, and phone numbers (including an auto-dialer). You create custom applications with a menu-driven forms builder.

Priced at \$195, *Arriba* requires DOS 2.0 or a later version and a hard disk. It runs in 200K when memory resident and in 384K as a stand-alone. Good Software Corp., 13601 Preston Rd. 500W, Dallas, TX 75240; 800/272-4663. —Mark Henricks

PrintRite

Printing Without the Printer

It doesn't matter if you're packing the most powerful laptop ever made on that next plane ride; you'll never get off the ground if your software requires a printer to generate reports. You could haul a printer along, of course, but *PrintRite* offers an easier-going solution.

The memory-resident paperless printing utility will fool even the pickiest software into thinking that it's driving a printer. *PrintRite* actually compresses paperless print jobs, spools them to a DOS file, and places them in a print queue ordered by priority and form type. While a report is "printing" sans paper, you can monitor it on line. Better yet, use *PrintRite*'s report viewer to page forward and backward through the file or even search by character string.

Hewlett-Packard (continued)

4.0, *PageMaker*, *Ventura Publisher*, *Lotus Manuscript*, *WordStar 2000*, and *WordStar Professional 5.0* support *Type Director*-generated fonts, allowing you to pick them from internal application menus.

Type Director automatically gauges the amount of disk space a font of a particular size requires and checks to see if you have enough available. If necessary, you can erase fonts from your disk with the program. Additionally, you can load just the

Reports spooled to disk can be held indefinitely until you're ready to print (you can also store them as editable ASCII files—handy for programs that can't "print to disk").

When you get back from your trip, hot-key to the main menu's printer management options such as stop, pause, and restart. You can send reports—or any text file—to any of five printers for background printing. A virtual print buffer allows you to keep working in a foreground application. You also can control output via escape codes sent to the printers. *PrintRite* sells for \$99.95 and requires DOS 2.0 or a later version and 50K of memory. Rite Software Inc., 4144 N. designs require replacement of the entire cartridge. Mannesmann Tally claims that this means an operating cost of less than 3 cents a page, excluding paper. Paper can be fed as individual sheets or through a 250-sheet cassette that adjusts to letter, legal, label, and envelope formats.

Resident fonts are Courier Medium, Courier Bold, and Lineprinter, all in portrait and landscape modes. Additionally, two slots accept any LaserJet font cartridge, and the printer recognizes downloadable fonts. It ships with 512K of RAM, and upgrades are available in increments of 1MB, 2MB, or 4MB.

On the home front, the MT81 is a light-duty dot matrix unit that offers near letter quality printing for only \$199. The device does it by using square pins in the print-head to put a crisper edge on characters—a small improvement that could mean the difference be-

tween calmly placing a finished report in your briefcase for a morning meeting or hastily re-printing it when you arrive at the office. And the MT81 won't be underfoot at home; since it weighs only 9 pounds and measures under 9 by 12 inches, you can stash it almost anywhere.

Not that the MT81 is without its limits—it clocks in at a merely okay 130 characters per second in bidirectional draft mode and only 26 cps in near letter quality mode. But pitch can be set for 10, 12, 17.1, or 20 characters per inch in draft and 10 or 12 cpi in near letter quality. High-end paper-handling features include both standard friction and tractor feeds, the ability to print single sheets without removing form paper, a quick-tear bar, and a paper path that accepts four-part forms. Laser-Ready

Dress Up Your Off-the-Rack Business Forms

Many people buy laser printers because they're quiet and dependable and print professional-looking letters fast. That's a little like buying a Ferrari because it's easy to park.

But behind the average company's correspondence lie piles of business forms, mailing labels, overhead transparencies, and other documents that could be generated on those lasers if their owners weren't reluctant to invest time and money in learning a desktop publishing program.

Laser-Ready is a \$99.95 shortcut, a printing utility that helps you get more out of your laser by providing the software, fonts, templates, and supplies for printing forms that you might otherwise buy or produce by less convenient means. You choose from a selection of more than 30 fill-in-the-blank business documents, including two types of invoices, purchase orders, and monthly statements and six styles of letters. Use its simple word processor to enter your company name and fill in the blanks of your form. Then, a single print command produces

custom-looking forms, stationery, and even envelopes.

Laser-Ready includes templates for newsletters, fliers, notices, overhead transparencies, résumés, and mailing labels. The program automatically chooses the type size in Times, Helvetica, or Elite and downloads everything

to your printer so you can also use these fonts with other PC programs.

Unfortunately, you trade flexibility for ease of use; these forms aren't customizable and so may not fit the stylistic requirements of every company. But at only 5 percent of the cost of the average LaserJet II com-

patible, *Laser-Ready* is not a bad bargain, especially for small firms.

The three-disk program requires DOS 2.1 or a later version, 512K of memory, a hard disk, and a CGA, EGA, VGA, or Hercules graphics board. Mind Path Technologies, 12700 Park Central Dr. #1801, Dallas, TX 75251; 800/634-7424, 214/233-9296. —Mark Henricks

Up Your Cash Flow

Forecasting the Easy Way

It's a rare manager who has never relied on one of today's spreadsheet heavyweights to help slash through some knotty business problem. But most labors you face day-to-day are less than Herculean. You may not need the power (and complexity) of *1-2-3* or *Excel* for a simple cash flow projection, P&L, or balance sheet—especially if you're in a small business.

Up Your Cash Flow dispenses with fancy features like worksheet linking and sophisticated output options, focusing instead on a bare minimum of common spreadsheet chores and delivering the results in a plain-Jane printout. In fact, this rudimentary forecasting tool is so straightforward that Granville Publications has dispensed with the manual. Instead, you get a single sheet of instructions telling how to install the program and navigate a similarly abbreviated set of menus.

Up Your Cash Flow lets you create common business documents such as cash-flow projections, P&Ls, balance sheets, and payroll forecasts.

Up Your Cash Flow's limited options include some data entry shortcuts. For example, you can choose one of several ways to project the year's payroll—adjust last year's figure by a percentage; enter an arbitrary figure; or define payroll as a percentage of sales, as a specific monthly amount, or per employee. If you want, you can enter each employee's name, and when and how large a raise you plan, if any.

The program then produces a payroll forecast by year, quarter, and month. That's all you do, and that's all it does, except that you can pass the

payroll data over to P&L, cash flow, and balance sheet forecasts. The program's repertoire also extends to limited "what if" sales projections and loan amortization schedules. Output is in a no-frills spreadsheet format; your only choices focus on content, not form.

Up Your Cash Flow retails for \$129.95 and requires DOS 2.0 or a later version, 512K of memory, and a hard disk. Granville Publications Software, 10960 Wilshire Blvd., Los Angeles, CA 90024; 800/873-7789. —Mark Henricks

AutoImport

Data Swapping

Data import/export seems to be the rage these days, judging from the number of new products dedicated to eliminating the mindless tasks of rekeying data and removing unwanted control characters. *AutoImport's* particular twist is that in addition to swapping data between 1-2-3, dBASE, and the usual cast of market leaders, it lets you download mainframe and microcomputer report data files directly in PC format without reformatting.

You can use *AutoImport's* slash commands or point-and-shoot menu to create a "mask" of rows, columns, and headings that will import only those portions of a report that you want, cutting short your data parsing. *AutoImport* translates

headings, dates, titles, and other characters into equivalents that the target application can use. It also lets you consolidate ASCII data from multiple worksheets and data bases into a single file.

The program imports standard DIF, ASCII, or ASCII comma-delimited files and reads data files from 1-2-3, *Symphony*, *Excel*, *Quattro*, *dBASE III Plus*, and *dBASE IV*. Or you can use Printer Interceptor, a 7K memory-resident utility that captures a screen display at a touch of the <Print Screen> key, converting it into a standard ASCII file.

Priced at \$169.95, *AutoImport* requires DOS 2.1 or a later version and 512K of memory. White Crane Systems, Inc., 6889 Peachtree Industrial Blvd. #151, Norcross, GA 30092; 404/394-3119. Reader service no. 740

Network Eye

Taking Control of the Network

Artisoft's *Network Eye* lets you synchronize the processing activities of up to 100 workstations and get the most bang for your network buck. The program adds remote control capability to PCs on Novell *NetWare* and *NETBIOS*-compatible networks, letting system administrators or other authorized work-group members tune in on 1 or 100 other network nodes—viewing their screens, controlling their processors, and using their peripherals.

For example, you can sort a data base on one system, send a file by fax or modem on another, and edit a report on a third—controlling them all via individual windows on your own screen. Conversely, any number of computers can simultaneously access and control a single workstation—say, a dedicated fax PC. You can work on a single file with a fellow work-group member or broadcast on-screen activity to all PCs on the net.

Network Eye costs \$295 for a network of up to 100 computers. Artisoft, 3550 N. First Ave. #330, Tucson, AZ 85719; 602/293-6363.

Pizazz Plus

Finally—An Easy Way to Capture and Print Screen Images

Sometimes it's a lot easier to create an image than to print it out in exactly the right way. That simple fact has sold a lot of screen-capture and print utilities to impatient desktop publishers and graphics users who want output now without having to mess around with manuals and device controls. And as screen and output resolutions climb, and color and gray-scale printers spread, these utilities look better and better.

A look at *Pizazz Plus* shows why. Like the original version of Application Techniques' *Pizazz* utility, *Plus* lets you capture, display, and print images via a simple menu-driven interface. There are no con-

trol codes and no communication chores when switching between a wide range of software, hardware, and peripherals.

Plus's print tools keep pace with powerful new printers and image-capture boards. The upgrade adds VGA to the already extensive list of 25 graphics adapters supported, including most popular XT and AT cards. AT&T's Truevision 16, with up to 16 million colors, the Targa family, and other AT&T 6300 display adapters are also supported.

On the output end, *Plus* works with more than 220 printers, keeping separate gray-scale and

"Is there something we missed?"

Is there anything missing in the ACCEL-500 24-pin dot matrix printer?

Not performance. The ACCEL-500 can zoom through drafts at 480 cps. Print charts and graphs in dazzling color. And combine letter quality with high resolution color graphics.

Not versatility. The ACCEL-500 is compatible with most popular printers. So it's equally at home on Macintosh® and IBM®-compatible PCs. There's a paper-handling option for every office application, too.

Not convenience. The ACCEL-500's innovative Select-Dial™ makes paper handling a snap. And plug-in Intelli-Cards™ add fonts and printer emulations instantly.

Not reliability. The ACCEL-500 is a 'round-

the-clock workhorse that takes even the most demanding workload in stride.

And certainly not value. The ACCEL-500 is priced below leading printer brands that offer far less capability.

In fact, it seems that the only thing missing from the ACCEL-500 is you.

Readability Plus

Analyze Your Writing Style

If writing isn't your strong suit, Scandinavian Systems is hawking a new version of its *Readability* style checker that could help. *Readability Plus* includes more ways to measure how your style compares to commonly accepted writing practices, tailoring its critique to the type of document you're creating.

The writing helpmate will analyze a document and make recommendations based on nine different models: general purpose writing, newspaper articles, novels, magazine feature stories, advertis-

ing copy, children's books, technical writing, government reports, and bureaucratic gobbledygook (a style to avoid).

The latest version incorporates four widely accepted measures of readability—the Flesch Reading Ease Index, the Flesch-Kincaid Index, Gunning's Fog Index, and LIX (the Fog Index's European counterpart). *Readability Plus* analyzes a document 20 ways, comparing the ratio of difficult information-laden words to more common words, the mix of short and long sentences, and

Readability Plus evaluates your writing style based on the kind of document you're trying to create.

the percentage of sentences containing only short words.

Rather than making a word-by-word analysis, *Readability Plus* assesses

the overall impression your writing gives and whether it's appropriate for your audience. It doesn't offer up canned prescriptions, but it does identify problem sentences, tell why they are wrong, and leave the solution to you. *Readability* reads only ASCII files, but *Readability Plus* reads files from *WordPerfect*, *WordStar*, *WordStar 2000*, and *Microsoft Word*.

Readability Plus retails for \$94.95 and requires DOS 2.0 or a later version and 256K of memory. Scandinavian PC Systems, 51 Monroe St. #1101, Rockville, MD 20850; 800/288-7226, 301/983-7450.

color mapping tables for all of them. You'll get up to 256 shades of gray out of a suitable black-and-white printer and as many

as 16 million colors when using the right graphics board and color printer, without learning any control codes.

On the software side, *Plus* offers image capture and export to *PageMaker*,

Ventura Publisher, *WordPerfect 5.0*, and *Microsoft Word*. Moreover, a couple of nice touches will please desktop publishers. Captured text is automatically converted to graphics mode so that it can be rotated, cropped, and printed at any size by *Plus*. Also, the software easily translates color (red-green-blue) screen images into gray-scale halftones, which can then go directly to the printer or be translated into a desktop publishing file format.

The \$149 memory-resident program occupies 32K of memory and requires DOS 2.0 or a later version in a 256K machine. Owners of the older \$99 *Pizazz* can upgrade for \$59. Application Techniques Inc., 10 Lomar Park Dr., Pepperell, MA 01463; 508/433-5201.

Why Use The SL Sharing Device?

Saves Money By Sharing

When you can't afford to buy a laser for each PC, using the SL™ is the inexpensive way to let everyone share - not just your lasers, but printers, plotters and modems as well. You will get more efficient use of your peripherals because greater access by more users reduces unproductive idle time and the need to purchase more of these expensive devices.

Increases Office Efficiency

An SL with memory improves PC productivity by allowing all users to simultaneously send their print jobs and release their PCs to continue working without being delayed by other users or slow printers. Memory in the SL is a more sensible investment than additional memory in each printer since SL memory is shared by all users and all peripherals.

More For Your Money

If you don't need E-mail or access to shared files, the SL is an alternative to a LAN at a fraction of the cost. When you compare the price and capabilities of the SL with any similar devices, we believe you will agree with thousands of well-informed professionals that the SL is the best value available anywhere!

Advanced Word Processors— Familiar Faces, New Features

Not all word processors have evolved from their humble beginnings into polished modern products.

Our roundup of advanced programs identifies the ones best adapted to user demands.

George
Beinhorn

Many of the major word processors have been around for years, but not necessarily because they're superior products. A large installed base, a deep discounting policy, or profound user inertia may be a more likely explanation.

Although all eight programs reviewed here are veterans—*WordPerfect 5.0*, *Microsoft Word 4.0*, *XyWrite III Plus 3.54*, *WordStar Professional 5.0*, *WordStar 2000 Plus 3.0*, *DisplayWrite 4* version 2, *MultiMate Advantage II 1.0*, and *Samna Word IV 2.0*—they're definitely not created equal. Despite their similar prices, these programs differ significantly in user convenience and sophisticated features.

Rating the Word Processors

In evaluating the software, we analyzed three key areas. First, we looked at how a product's unique "personality" contributed to (or diminished) efficiency. *Microsoft Word*, for example, provides excellent mouse support that allows for quick editing; conversely, *DisplayWrite's* single-page orientation makes basic editing time-consuming.

Next, we ran all the products through National Software Testing Laboratories' (NSTL) speed benchmarks. *XyWrite III Plus* emerged as the fastest program overall; the others turned in mixed performances depending on the type of test.

Finally, because all the products perform basic editing functions without a hitch, we focused on critical advanced features—macros, style sheets, mail merge, desktop publishing, and printing—with a particular emphasis on ease of use.

WordPerfect and *Microsoft Word* emerged as the top-rated programs, earning *PC World's* Best Buy award. The programs that

finished at the bottom of the heap—*DisplayWrite 4*, *MultiMate Advantage II*, and *Samna Word IV*—share a lineage as dedicated word processors. Although they're not without strengths, their weaknesses are critical enough, in our opinion, to merit low ratings.

WordPerfect 5.0

WordPerfect consistently delivers cutting-edge performance. Thanks to its clean design and sophisticated array of advanced features, which include superior desktop publishing and file management, version 5.0 earns our Best Buy award.

If *WordPerfect* has any weaknesses, they stem from its sheer magnitude. For example, although the program's function key-intensive interface places a complete array of features at your fingertips, it's hard even for experts to remember the commands. Similarly, *WordPerfect's* powerful macro language supports conditional statements, nests macros, and even recognizes syntax errors during macro execution, but it's cryptic and poorly documented.

WordPerfect's formatting features are thorough and well implemented. However, beginners may have trouble at first with the program's hidden codes, which make it easy to overlook errant format changes.

WordPerfect's style feature is roughly comparable to *Word's* style sheets. One big bonus is that *WordPerfect* styles can contain text, unlike *Word's*. On the other hand, style changes don't occur dynamically in all the documents that use a given style.

WordPerfect's mail merge feature is powerful; it can sort and select addresses, skip improperly formatted records, and automatically reformat merged text. However, the program doesn't read 1-2-3, dBASE, or ASCII-delimited files.

FEATURES EVALUATION

Word Processors: The Haves and the Have-Nots

Prices don't vary greatly, but features do. Although all the programs are competent in basic editing, top-rated Microsoft Word and WordPerfect offer more advanced features.

5.0's desktop publishing features are the best of the group. The program imports graphics in most graphic file formats, and a screen-capture utility covers the exceptions. Imported images can be sized, rotated, framed, and repositioned. You can preview text and graphics in color, but you can't edit in preview mode. 5.0 offers above-average printer support, too.

Although the interface can be difficult and the hidden format codes a nuisance, WordPerfect's overall power and versatility make it an excellent value.

Microsoft Word 4.0

Microsoft Word 5.0, which was unavailable for review at press time, adds dozens of features that address most of version 4.0's deficiencies. But version 4.0 is still loaded with standout features, including first-rate style sheets, powerful mail merge, and excellent printer support. Toss in strong performance on NSTL's speed tests, and Word 4.0 earns a Best Buy.

Word's major drawbacks are confusing menu commands (for example, Transfer Load to retrieve a file) and minimal file management capabilities. On the other hand, it's the only program reviewed that fully supports a mouse—which lets you edit at warp speed. An easy-to-use recorded macro capability and a powerful programming language also allow faster editing.

Word's code-free formatting is a pleasure, especially after hassling with WordPerfect's hidden codes and WordStar's dot commands. If you want style sheets, Word has the real thing. Word's paragraph orientation allows you to tag portions of text such as headers or footers with specific styles. You can attach a style sheet to several documents at once, so when you change a style, the tagged text automatically adjusts in all the documents that use that style sheet.

Word's solid mail merge feature can pause for input from the keyboard and insert text files into a merge document. And Word can create data entry forms, though not as well as WordStar 2000 Plus's Fill-a-Form add-on.

Word's desktop publishing tools are no match for WordPerfect's. In fact, you must use Windows and a separate utility called

NSTL TEST REPORT

Advanced Word Processors: Speed Isn't All

Though XyWrite III Plus is the fastest program overall, Microsoft Word and WordPerfect earn Best Buys because they provide a winning combination of features as well as sufficient speed.

Load a file

Save a file

Global search and replace

Methodology

Tests were conducted on a 12-MHz Compaq Deskpro 286 with 1MB RAM, DOS 3.3, and a 20MB hard disk. All tests were timed from the command to initiate the test function until control was returned to the user.

Load a file

This test measured the time required to load a 53-page document into the text editor.

Save a file

This test measured the time required to save a 53-page document and clear the screen.

Global search and replace

With the cursor positioned at the beginning of a 53-page document, the program was instructed to automatically replace all 140 instances of *program name* with *program name v. 5.0* and to reformat and repaginate the document as necessary.

Print a file

Spell check

Mail merge

Print a file

A 53-page document was "printed" to a device that simulates an infinitely fast printer, one not slowed by paper or printhead movement.

Spell check

This benchmark measured the time a program's spelling checker required to proof a 53-page document. Before the test was timed, words that the program didn't recognize were added to the user dictionary to ensure that the program checked the entire document without interruption.

Mail merge

This benchmark measured the time required to merge a set of 20 address records in ASCII format with a one-page form letter containing 10 different merge fields, plus the time to print the letters to a device that simulates an infinitely fast printer using a Hewlett-Packard LaserJet Series II printer driver. The time required to convert an ASCII file to a proprietary format was added to the print time.

NSTL BENCHMARK TESTING

The exclusive test facility for *PC World*, **National Software Testing Laboratories (NSTL)**, is an independent organization that specializes in evaluating personal computer hardware and software. A recognized pioneer in state-of-the-art test design, **NSTL** believes that the most useful benchmark tests measure how well products perform when executing typical business tasks. **NSTL** testers follow detailed test plans that simulate normal operating conditions. A controlled testing methodology ensures objective, accurate, and consistent results and gives consumers a sound basis for making purchase decisions. **NSTL** publishes its test results in *Software Digest Ratings Report*® and *PC Digest*.™ Neither publication accepts advertising. **NSTL** is located in Philadelphia, Pennsylvania.

Pageview to import graphics or to preview a page. And graphics can't be sized or manipulated on screen.

Word excels in printing. Fast in **NSTL** printing tests, the program also provides unrivaled laser printer support, including PostScript models.

At press time, Microsoft had announced that *Word 5.0* would add integrated page preview, dynamic document linking, graphics support, better file management, and a bookmark feature that automatically cross-referenced blocks of text, among other new features (see the *Word 5.0* preview in *PCW*, December 1988). These additions are likely to make *Word* more competitive with *Word-Perfect* in the features war. Meanwhile, both programs deserve our Best Buy stamp of approval.

XyWrite III Plus 3.54

True to its reputation for world-class speed, *XyWrite III Plus* does *everything* fast—except, perhaps, teach you its command-driven interface. Version 3.54 eases the learning strain with excellent on-line help, an entirely new optional pulldown menu system, and the ability to build custom menus. *XyWrite*'s feature list is no match for *Word-Perfect*'s or *Word*'s, but the program's speed is additive.

Although *XyWrite*'s comprehensive formatting features get the job done, they lack panache. Format codes appear on screen as highlighted triangles; to reveal a code's function you must place the cursor on the trian-

gle or use a special key combination to unveil all codes. *XyWrite*'s styles feature is limited to basic page layout settings and requires using abstruse format codes instead of menus.

XyWrite's mail merge is primitive, providing no support for conditionals or user prompts. Moreover, you can't sort and select records stored in the mail merge format as you can with most of the other programs.

Although *XyWrite* has some desktop publishing capabilities, they're rudimentary. *XyWrite* can't directly import graphics, and page preview is one of the program's few slow features.

XyWrite's major new addition in version 3.54 is a menuing add-on called *A la Carte*. This optional pulldown menu system is straightforward and well implemented, although naturally it's slower than the command-driven interface. But if the new menus don't satisfy, sophisticated users can create their own with the program's custom-menu capability. This complicated process involves modifying the program's help files and requires a serious study of the manual.

XyWrite's kinder, gentler menu system makes a fair bid for new users. Its feature list may be shorter than other programs', but if your main concern is high-speed editing, look no further.

EXECUTIVE SUMMARY

XyWrite III Plus 3.54

Word processor

Nothing matches *XyWrite* for sheer speed, but the command-driven interface is hard on beginners. *XyWrite* is a solid performer, as long as you don't need advanced mail merge and desktop publishing features.

EXECUTIVE SUMMARY

WordStar Professional 5.0

Word processor

This new release of WordStar has done a fine job of playing catch-up in the features derby. Good editing, superior mail merge, and spectacular page preview must be balanced against esoteric dot-command formatting and an unexciting macro feature.

WordStar Professional 5.0

WordStar Professional, one of the first word processing programs for the PC, has steadily acquired impressive talents in recent years. Release 5.0 features optional pulldown menus, stunning page preview, laser printer support, and automatic text reformatting. Moreover, at press time, release 5.5 was waiting in the wings with upgrades to address 5.0's shortcomings.

WordStar's hands-on-the-keyboard <Ctrl>-key commands make it a facile editor for touch-typists. However, the program still uses arcane dot commands for document formatting, and it lacks style sheets. Another drawback is *Professional*'s macro feature, which like *WordStar 2000 Plus*'s requires you to construct macros in a cramped editing screen. Mail merge is a traditional *WordStar* strong point. Release 5.0 includes a bundled utility called MailList for data entry, which makes typing data files a menu-driven, error-free treat.

WordStar's document preview is easily the best of the programs reviewed. It shows a full-page view of the current page with fonts and columns accurately depicted. You can display single pages, 6 or more pages at once,

or up to 144 thumbnail pages. It's too bad that *WordStar Professional* can't import graphics.

WordStar's energetic revival seems geared to attract users with desktop publishing needs. Release 5.5, which wasn't available for review at press time, will provide style sheets and the ability to import, manipulate, and preview graphics. However, arcane dot commands, anemic macros, and lack of graphics importing may make 5.0 less appealing for some users.

WordStar 2000 Plus 3.0

WordStar 2000 Plus is MicroPro's attempt to create a competitive word processor that's entirely different from *WordStar Professional*. In addition to having a completely new interface, *2000 Plus* muscles up on its sibling with a host of add-on programs and the ability to import graphics and preview them within text on screen. The program also noses out *WordStar Professional* with better-than-average speed in NSTL tests.

WordStar 2000 uses the classic *WordStar* <Ctrl>-key scheme, but its interface is mnemonic. You press <Ctrl>-QS to quit and save, for example, rather than <Ctrl>-KD. Editing features are capable, but macros

EXECUTIVE SUMMARY

WordStar 2000 Plus 3.0

Word processor

WordStar 2000 Plus offers a good design and a superb features list. The many add-ons that give it power also add complexity, but the program is still worthy of consideration.

must be named and retrieved like text files rather than assigned to easy-to-use key combinations.

The plain-English formatting codes in *WordStar 2000* are a vast improvement over *WordStar Professional's* dot commands. *WordStar 2000's* style sheets, however, are only fractionally as powerful as *Word's*: They're limited to basic page layout settings and cannot format portions of text.

WordStar 2000 Plus's mail merge recognizes conditionals and variables and can use data files from *1-2-3* and *dBASE*. A bundled program, Fill-a-Form, enables you to fill in preprinted forms on screen, then store, sort, view, or selectively retrieve them.

WordStar 2000's desktop publishing features are no match for *WordPerfect's* or *WordStar Professional's*, but they're adequate. *WordStar 2000's* page preview shows just one page of text and graphics at a time. The program augments its desktop publishing features with ShowText, a charting program, and InSet, which imports graphics.

WordStar 2000 comes with a host of add-ons that work well but require you to learn separate interfaces and commands. Other bundled programs include a fast file-search utility, a document comparison program, a handy outliner, and a communications package.

EXECUTIVE SUMMARY

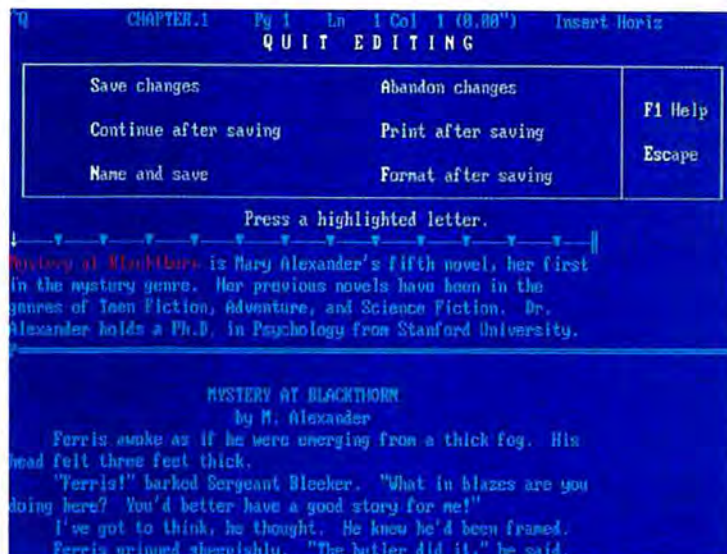

DisplayWrite 4 version 2

Word processor

DisplayWrite is still playing catch-up with state-of-the-art programs like Word and WordPerfect. Current users will be pleased with this update of a basic word processing tool; others should look elsewhere.

Even though *WordStar 2000 Plus* is a heavyweight in features and convenience, its muscle-bound array of add-ons can make it hard to learn. However, if you don't mind the learning curve and if top-flight desktop publishing isn't critical, check it out.

DisplayWrite 4 Version 2

DisplayWrite 4, which evolved from IBM's dedicated word processor, suffers from vestigial links to its past. This latest version adds a thesaurus, text columns, expanded printer support, and the ability to copy document formats—features standard in high-end word processors two years ago. Time, however, hasn't slowed *DisplayWrite* down; the program produced respectable results in NSTL tests.

DisplayWrite's editing and formatting features are behind the times. For example, you can't jump to the beginning or end of a file. Documents must be manually paginated to display page breaks, multiple-line spacing doesn't appear on screen, and there's no style sheet feature. The program's macros are adequate and can be easily edited, but you won't find a programming language.

If you need desktop publishing, you'd better consider another program—*DisplayWrite* has no page preview or graphics import functions.

DisplayWrite's strong suit is its mail merge feature, which accepts data from *1-2-3*

WordStar 2000 Plus shoots for widespread appeal with easy-to-use, mnemonic menu commands and plain-English format codes.

and dBASE. Merge documents can use conditionals, math calculations, and even skip-to-line statements.

Although *DisplayWrite 4* version 2 is adequate for basic office duties, it still lacks state-of-the-art features. If yours is an all-IBM shop, the upgrade is definitely worthwhile; otherwise, shop around.

MultiMate Advantage II 1.0

MultiMate, the original emulator of the Wang dedicated word processor, is an old workhorse that shows its age. Ashton-Tate offers an add-on package, the Printer Enhancement Pack, that provides noninteractive page preview and font management capability. However, *MultiMate* is a cut below *Word* and *WordPerfect* in functionality, except in one area: mail merge.

Unlike *Samna* and *DisplayWrite*, *MultiMate* has clean menus, a sensible design, and excellent document summary screens. But *MultiMate* also suffers from many of those programs' deficiencies, such as inconvenient page-oriented formatting. Moreover, the program doesn't provide advanced features like a macro programming language, style sheets, or graphics import.

MultiMate's mail merge feature is superb, thanks primarily to a terrific integrated flat-file manager, On-Line, that sorts and selects merge records. *MultiMate*'s excellent forms fill-in feature can also create mail merge data files.

MultiMate's comprehensive document summary screens let you tag files with detailed, printable comments, and keywords that can be used during file searches.

EXECUTIVE SUMMARY

MultiMate Advantage II 1.0

Although it offers a sensible design, this old-timer just doesn't match up to *Word* and *WordPerfect*. Unless you live and die by mail merge printing, look at other word processors first.

If you do a lot of complex mail merging, you won't find a better helper than *MultiMate*. However, nagging inconveniences like manual repagination drop *MultiMate* a few rungs below *Word* and *WordPerfect*.

Samna Word IV 2.0

Samna Word IV is another Wang clone, but unlike *MultiMate*, *Samna* hasn't improved much on its parentage. Although it's a capable program, its interface is the hardest to learn in the group. Pulldown menus are assigned to function keys in a seemingly random arrangement, and all menu prompts are displayed in hard-to-read uppercase text.

Samna requires more keystrokes to perform an editing task than any of the other programs reviewed. Although there's a macro record function, macros must be assigned to hard-to-remember function key/number key combinations, such as <F5>2.

Document formatting is capable but unexciting. Moreover, there are no style sheets, and multiple line spacing does not appear on screen. Mail merge and desktop publishing features are both weak.

In the Wang clone category, *Samna* runs a distant second behind *MultiMate*. The program is hard to learn, its features are limited, and its interface sorely needs polishing.

Easy come.

Life is hard. And then you get a Connection CoProcessor™ board. It's Intel's way of letting you communicate almost effortlessly, using your PC. And for other PCs and FAX machines to send messages to your PC with the same ridiculous ease.

True, you do have to press a few keys on your PC. But you don't have to set any protocols, wait for a printer to do its thing, or stand in line at a FAX machine.

The real labor saver here is CAS. CAS is a software link which allows you to send information directly from applications like Lotus® 1-2-3 rel. 2, WordPerfect™ 5.0, Q&A™ 3.0 and Sidekick® Plus. You can now send documents simply by indicating what you want to

send and who you want to send it to.

And our Connection CoProcessor won't waste your valuable PC time while it's communicating. You can continue to work while it sends programs, data and text, across the street or across the globe.

Because the Connection CoProcessor uses its own microprocessor and memory to take on the time-consuming job of sending and receiving information in the background.

All this, and Intel's toll-free technical support and a five-year warranty. Call us at 1-800-538-3373 to find out how Connection CoProcessor beats the way you're communicating today. Coming and going.

EXECUTIVE SUMMARY**Samna Word IV 2.0***Word processor*

Samna is the hardest to use of the programs reviewed. It's relatively slow, and its features list is scant compared to the top-rated packages. These flaws more than outweigh Samna's few solid features.

Reader service no. 727**The Final Word**

Word and WordPerfect consistently push the technology envelope, and their efforts have

paid off. Take your pick: These two outstanding programs are our Best Buy choices. Deciding between them comes down to whether you want Word's superb style sheets and mouse support or WordPerfect's strong desktop publishing features.

The second-tier programs are solid choices in their own right. WordStar 2000 Plus is generally excellent, but its use of memory-resident add-ons burdens it and makes it less convenient to install, learn, and use. WordStar Professional offers great mail merge and page preview but lacks graphics import and macro power. XyWrite III Plus is a full-speed-ahead text editor but trails the leaders in wealth of features.

DisplayWrite, MultiMate, and Samna are grizzled veterans whose dedicated-word-processor pasts still haunt them. Unless your office is already committed to one of these products, opt for one of the other programs. ●

The Best in Forms Software

**Forms software can speed up one
of the most tedious office tasks.**

**But you'll want a package with
an easy-to-use design module,
plenty of field definitions, and
generous font support.**

Fully a third of all business documents are forms. Office supply stores stock pre-printed forms for common needs, while word processors can create uncommon ones. Forms software takes you a step further. There's nothing like having a variety of good-looking forms on call in your computer, ready to be customized and printed with a minimum of muss and fuss. Furthermore, being able to automate the process of *filling in* forms at your PC can be a real boon.

Forms programs for the PC come in all stripes, from basic form printers and packages that simply fill in the blanks to full-featured design tools that enable you to create forms and merge them with keyboard entries and data base records. *PC World* looked at the field and reports here on the five that offer the most impressive combination of features and ease of use: *FormFiller*, *FormSet*, *Horizon*, *JetForm*, and *Per:form*.

All five packages provide predesigned forms (or data entry templates) that you can customize, and three let you create brand-new forms from scratch—but some make design much speedier than others. The fastest design modules use a mouse, handy drawing tools, and a sophisticated what-you-see-is-what-you-get interface. Some even include form scanning facilities.

Automating data entry is probably the single most time- and cost-saving capability of a forms package. The best of these programs support field definitions reminiscent of a data base front end: required fields, calculated fields, and fields derived from those on other forms. All the packages can export manually entered data to an ASCII file for later use—but not with equal facility. All can import data from ASCII files (such as those produced by *dBASE* and *1-2-3*). A few can import and export data in *dBASE*'s native .DBF file format as well.

Attractive printed forms are one key objective of a forms program. The primary printing issues are print speed and the ability to use cartridge and soft fonts for professional-looking forms.

FormFiller 2.0

If you're happy with your current set of printed forms but want to computerize the fill-in and printing processes, Bloc Publishing's easy-to-use *FormFiller* is just the thing. It lets you create an on-screen data entry template with flexible field definitions and data entry and printing options. The

**Michael
Goodwin
and
Luther
Sperberg**

template can be designed to duplicate the appearance of the actual form. It even includes 24 plug-and-play templates (such as one for filling in a Federal Express shipping label). And at \$149 it's among the most affordable forms packages available.

To simplify template design, *FormFiller* prints a line-and-column grid overlay on your preprinted form, from which you can extract coordinates to locate on-screen data fields. And for printing on forms designed with more (or less) than the standard 80 lines to the page, it provides easy access to the printer's vertical movement index.

FormFiller allows an unusually wide range of field definitions: calculated, com-

pulsory, numeric, text, time, date, even Boolean IF...THEN operators. And you can write customized error messages for each field. Data can be imported from and exported to ASCII and .DBF files; in fact, you can access data from up to 640 data files simultaneously.

Many other elements of the program are also impressive. Printing is fast and flexible. Documentation is clearly written, but the context-sensitive on-screen help is so good you may never need to crack a manual.

Since there's no forms design capability, look elsewhere if you want to create forms

FormFiller 2.0

Forms creation software

If you're happy with your pre-printed forms, this affordable (\$149), easy-to-use package lets you speed data entry and printing by creating on-screen data-entry templates with a

FormSet 1.0

At \$95, Softview's *FormSet* boasts the lowest price in the roundup. It comes with no fewer than 65 good-looking forms, a mouse-driven what-you-see-is-what-you-get display, and a run-time version of *Windows*. The bad news is that your options for customizing those forms are limited to adding your name, address, local tax rate, and a small logo, because *FormSet* does not include a form-design module. (Softview promises design capability by the end of 1989.)

Aside from having to skip over the fields you don't want (and can't remove), data entry from the keyboard couldn't be easier. The forms come with many fields preset for automatic calculation and numeric or text input, and pertinent information is linked among related forms. Pressing <F3> takes you automatically to fields with missing or inappropriate data.

Data import and export are awkward. While *FormSet* supports both ASCII and .DBF files, you must place imported data in

the form manually, field by field, using the tedious Import option on the file menu. Data export is equally painful, as the program forces you to open a different data file for each new set of record; accumulating records in a single data file is not possible.

The program comes with ten built-in, downloadable laser fonts to spiff up the page. Unfortunately, between downloading the fonts and formatting the forms, printing could not be slower if *FormSet* included a monk to hand-letter each page.

Documentation is barely acceptable, but there's good, context-sensitive on-screen help—and the manual includes a handy replica of each form.

FormSet's lack of a design module, poor data import and export, and slow printing bar it from the top spot. But if you're satisfied with its predesigned forms and plan to enter data from the keyboard, its low price, handsome output, and generous bundle of forms make it worth consideration.

EXECUTIVE SUMMARY

FormSet 1.0

Forms creation software

A low \$95 price, a generous library of 65 good-looking forms, an easy-to-use Windows-based interface, mouse support, and excellent data entry options are all solid pluses, but *FormSet* lacks a design module. Until it gets one, this package falls short of a Best Buy.

Horizon 1.1

FormMaker's *Horizon* is a low-cost (\$195) package that uses a run-time version of Windows' powerful, mouse-driven, what-you-

see-is-what-you-get design module. *Horizon* comes with 51 downloadable fonts and produces sharp-looking forms. However, its ability to define data fields is paltry, and its data entry and export modules are woefully backward.

Only six forms are provided, but powerful, easy-to-use design tools (and Windows' handy pulldown menus) make fast work of customizing them or creating new forms from scratch. You can draw boxes, divide them into any number of fields, and add lines, text, and data fields simply by clicking on the appropriate tool and dragging it to where it will do the most good.

To speed creation of forms containing lots of words, *Horizon* imports ASCII text files as well as scanned images and other graphics. You can even scan and import entire pre-printed forms. Unfortunately, *Horizon* has virtually no field definition capabilities. (An optional \$395 module, *Form Entry*, provides the missing field-definition options.)

Data entry from the keyboard is awkward. Unlike the other packages (including *FormFiller*), whose on-screen data entry templates look like printed forms, *Horizon* uses a forbidding data entry screen that dumps the information into the form when you're done. And saving the keyed-in data to a file (ASCII only) is anything but easy; like *FormSet*, *Horizon* creates a separate data file for each record.

EXECUTIVE SUMMARY

Horizon 1.1

Forms creation software

Horizon is relatively low priced (\$195), and its run-time version of Windows makes designing forms easy, but its drawbacks are serious: a stingy forms library, limited field-definition options, and hard-to-use data entry and export modules.

Horizon's print module is far more impressive. Cartridge and soft fonts can give forms a professional look. Merging data from a preexisting file (ASCII only) at print time is easy, and a special high-speed HP print driver delivers pages at an impressive clip.

The installation routine (which places Horizon and the run-time version of Windows on your hard disk) is tricky, and figuring out how to access the fonts is no trivial challenge. The manuals are voluminous, but the glut of verbiage makes it hard to find the information you need.

Horizon's limited field definitions and its painful data export make it a less than compelling purchase—but if all you want is the ability to design and print good-looking forms, its low price and generous font package are tempting.

JetForm 1.01

JetForm from Indigo Software has the best drawing techniques in the roundup. Like Horizon, it is based on a run-time version of Windows, and in many other respects the packages are quite similar: JetForm uses a mouse-based what-you-see-is-what-you-get interface and provides excellent design fea-

tures; its field-definition options are narrow; and it sticks you with an unimpressive data entry module and only a few primitive sample forms.

After that, the packages diverge. On the bright side, JetForm's data export options are superior to Horizon's. On the dark side, it provides no soft fonts (compared to Horizon's 51), and it crashed several times—usually as a result of our clicking the mouse in some secret Bermuda triangle on screen. Worst of all, at \$495 it's the most expensive one in the bunch.

For that \$495 you do get drawing routines that are intuitive and easy to use. Lines,

At \$495, JetForm is not cheap. And while it boasts a run-time version of Windows and the easiest drawing routines in the roundup, you get only eight forms. Moreover, field definition options are few, no soft fonts are provided, and the program crashed a number of times during testing.

boxes, circles, text, imported graphics, and logos can be created and/or placed with the mouse. You can even scan a printed form and trace it on screen. Cartridge and third-party soft fonts are displayed accurately (if a bit sketchily). Unfortunately, adding data fields is somewhat complicated, and field definitions are limited.

Data entry from the keyboard is straightforward, and data can be saved easily to an ASCII file. Custom help screens, added during the design stage, make filling in the forms even easier. Data can be imported from an ASCII file and merged with forms at print time.

On-line help and printed documentation are excellent. Still, despite its terrific design module, *JetForm's* relatively high price, limited field-definition options, and tendency to crash push it to the bottom of our list.

Per:form 1.0

Delrina's *Per:form* costs only \$260, comes with a run-time version of *GEM*, and offers the best balance of ease of use and power in the roundup. It provides a generous 32 forms, which you can modify easily with the powerful, mouse-driven, what-you-see-is-what-you-get design module—and you can create new forms from scratch.

Per:form uses an icon-based design module. Clicking the mouse on an icon activates a tool; dialog boxes and pulldown menus let you adjust parameters. You can also import a scanned form and use it as is or scan it and trace it for a sharper printout.

During forms design you can designate data fields as compulsory, calculated, numeric, and so on and use on-screen color coding to highlight parts of the screen. In addition, you can import graphics and attach short,

Per:form comes with 32 forms, such as this Inventory form, plus icon-based drawing tools with which they can be easily customized.

custom help screens to any field in the form.

Entering data from the keyboard is easy, thanks to the mouse, which allows you to fill in blanks out of sequence. Importing and exporting data to and from an ASCII file are straightforward.

A library of 22 proportionally spaced downloadable fonts is provided, and you can also use third-party soft fonts and PostScript fonts—but not font cartridges. *Per:form* supports the HP LaserJet, but unless you've beefed up your HP's standard 512K of RAM, you'll be limited to printing at 150 dpi—which makes printouts look a bit crude. Printing speed is unimpressive.

Per:form's excellent design is matched by excellent documentation. The manual includes introductory material for beginners and well-organized reference material for advanced users.

At \$260, *Per:form* costs significantly less than many forms packages, and it actually delivers the power many others merely promise. It would be nice if it printed faster (and at 300 dpi with a 512K LaserJet), but these are minor complaints given the program's excellent price/performance value.

Get the picture.

With Reflex® 2.0, when you look, you see. And you understand what your data really means.

You see trends, cycles, and relationships that are usually missed in ordinary databases, which are nothing more than a numbness of numbers.

Reflex 2.0 shows what your data really means—with pictures. With graphs. With multiple "views" that let you look at, analyze, and compare from a variety of viewpoints and perspectives. One window at a time or several different windows simultaneously.

And there's more do's and don'ts. Reflex does graphs, they don't. Reflex does interactive cross-tabs to instantly summarize your data; multiple forms; instant WYSIWYG reports. They don't.

Reflex lets you look at up to five different views at once.

Hot-linked windows

Each Reflex 2.0 window is hot-linked, so changes in one view are *automatically* reflected in others. Your data is always accurate, up-to-date, and in sync with itself.

There's more than one way to look at it
Most databases give you only one way to enter or look at data. Reflex 2.0 offers many more.

And while most databases decide in advance that you only need one form to perform all of your tasks, Reflex 2.0 lets you have as many forms as you need. With Reflex 2.0, you do it *your* way.

Make reports, form letters, graphs, and labels quickly and easily.

See it, do it

Reflex 2.0 lets you act fast on what you see. Features and functions like the Report Writer, Graph Print, Mail Merge, Crosstabs, Mailing Label Printer, and more. Output is crisp, clear, and highly professional.

Reflex 2.0 is only \$249.95

Reflex 2.0 at \$249.95 is a true value. If you deal with *any* kind of lists or data, and you want to see what it all means, you need Reflex 2.0.

Buy status. If your needs are limited to filling in preprinted forms, *FormFiller* is a high-powered package with a friendly interface; and at \$149 it also wins a Best Buy.

Two others, *Horizon* and *FormSet*, are less compelling but offer some tempting features. *Horizon* has only 6 sample forms, limited field-definition options, and a flawed data import routine—but its outstanding, mouse-driven design module, great-looking output, and low (\$195) price are big pluses. *FormSet* is a low-end leader; it costs only \$95 and comes with 65 good-looking sample forms on which data fields have been thoughtfully predefined. But it lacks a design module, which means you can't change the forms or create new ones, and data import and export are poorly implemented.

Forms processing is one of the last (and most time-consuming) office tasks to be computerized. Now, however, with the best of these forms packages, the forms bottleneck can be broken at last. ●

Quick Repeats for R:base Commands

R:base for DOS users, take heart! With just a couple of keystrokes, you can review, edit, and reuse any command issued at the R> prompt. To recall the previous command, use <Cursor Right> to reveal one character at a time, <Tab> to reveal ten characters, or <End> to display the entire command. In addition, <Page Up> and <Page Down> let you scroll through previous commands in the order you typed them. Although Microrim's documentation says only four commands can be retrieved in this fashion, *R:base* can actually step through dozens of statements in a single session. This technique is a powerful time-saver if you simply need to correct a spelling error or modify a query.

Data Base Powerhouses Strike a Balance

The top four programmable data managers square off.

**dBASE IV edges out Paradox 3.0
in a battle of programming power
versus relational versatility.**

Data management users are demanding. They want the programming clout to create sophisticated applications, as well as advanced querying and reporting tools they can master without memorizing a manual. Of the four programmable relational data managers reviewed here, only Ashton-Tate's *dBASE IV* and Borland's *Paradox 3.0* have this balancing act down pat. *R:base for DOS 2.11* lists too far into the programming realm, leaving casual users behind, and DataEase International's *DataEase 4.0* welcomes novices but handcuffs developers.

All the new versions reviewed here offer enough improvements to ensure that loyal users remain satisfied, but *dBASE IV* and *Paradox 3.0* are the clear leaders. *dBASE IV* is the most improved program in the roundup (see "Is dBASE IV Worth the Wait?" *PCW*, March 1989). Much of its strength comes from friendlier querying and reporting modules that mimic (and almost match) *Paradox*'s. Yet superior development tools give *dBASE IV* a slight edge.

Tracking the Wild DBMS

All four programs include menu-driven interfaces, offer capable LAN versions, and cost between \$700 and \$800. All supply strong programming languages, but *dBASE IV* de-

livers the best development tools. *dBASE IV*, *Paradox*, and *DataEase* all provide excellent screen generators for designing data entry forms. In report writers, *Paradox* and *dBASE IV* lead the way.

Relational skills vary. *Paradox*'s excellent table-oriented query-by-example (QBE) system makes command line querying passé. It also delivers multitable forms and extras such as outer joins. *dBASE IV*'s QBE and other relational talents are slightly less refined, and *R:base* and *DataEase* lack QBE altogether.

Less crucial than QBE is support for Structured Query Language (SQL), but if you need it, you'll be disappointed. *R:base* offers a SQL-like syntax and 15 true SQL commands, but it lacks the full command set. *dBASE IV* supplies complete DB2-standard SQL, but querying is slow, buggy, and awkward.

As NSTL tests reveal, *Paradox 3.0* and *R:base* turned in the best performance. *Paradox*'s indexed queries are top-notch, and *R:base* excels at nonindexed reporting. *DataEase* offers surprising speed with transaction processing. *dBASE IV* bests the competition in importing ASCII files but falls behind in other categories, showing par-

Tony
Lima

ticular sluggishness with nonindexed selections. As you'll see, however, performance isn't the only factor in the purchase decision.

dBASE IV 1.0

Name your favorite feature, and you'll find it in *dBASE IV*. With the addition of a hot new interface, QBE, and slick screen and report generators, *dBASE IV* finally matches its rivals' user-friendliness. Meanwhile, it re-establishes its lead in application development. *dBASE IV*'s application generator, editor, and debugger set new standards; there's also a wealth of third-party utilities. *dBASE IV* takes first place in this roundup, but mediocre speed, bumbling SQL queries, and lack of support for expanded memory keep it from earning a Best Buy.

The Control Center offers the best interface in the roundup for most users—although *DataEase* is friendlier for novices. The Control Center automatically catalogs all queries, forms, reports, and labels and opens them with their related data base.

dBASE IV's skill at generating data entry screens matches that of *Paradox* and

DataEase. You can mark blocks on screen and move or copy them at will. Imitating *Paradox*, *dBASE IV* offers a quick-layout option that builds an instant data entry form using on-screen elements. Surprisingly, *dBASE IV* bests *Paradox*'s reporting talents. Both programs offer band-oriented reports that make it easy to visualize final output. Yet the edge goes to *dBASE IV*, with its canned report formats, word wrap, search and replace, and copious printer drivers.

dBASE IV's relational talents almost equal *Paradox*'s. Both permit easy linking of related data tables via QBE, and *dBASE IV* avoids disk clutter by building QBE views on the fly instead of saving them to disk. Yet *Paradox* queries are faster, and it has better multitable forms and outer joins.

So far, it's a draw, but when you look at *dBASE IV*'s robust development tools, Ashton-Tate's entry pulls ahead. Its menu-driven application generator will please programmers and casual users alike. You can write a complex program simply by designing forms, reports, and labels and then link-

interface pro-
vides extensive
access to data
base functions.
When you open
a data base, all
related screen
objects load
automatically.

ing them. You can further edit the generated code using the top-notch editor.

dBASE IV is the sole contestant with a pseudocompiler, which automatically catches syntax errors before an application runs. With *Paradox*, you must run a program, find the error, correct it, and repeat the process ad nauseam. *dBASE IV* also proffers an animated windowed debugger that lets you examine the values of variables or fields, view

the active data base and current record number in a separate window, and install breakpoints.

Full-time programmers should invest in the \$1295 *Developer's Edition*, which offers a linker and an unlimited free run-time license. You also get an advanced template language that works directly with screen objects such as reports and forms, converting fields and memory variables into code. Developers can modify the template source code and recompile it to their specific style.

The *dBASE* language itself has been notably enhanced, offering transaction logging and rollback commands to protect against network data loss. However, its SQL system needs work. Version 1.1, due out this summer, may address these issues.

User-friendly at last, *dBASE* strengthens its role as the powerhouse data manager for critical applications. Today, it wins out over *Paradox* by a hair, but if Ashton-Tate can boost performance and overhaul its SQL, *dBASE IV* could leave the pack behind.

Paradox 3.0

Borland's \$725 *Paradox 3.0* offers users a good way to harness powerful data relations without grappling with the minutiae of programming. It's the only program reviewed with built-in graphics, its QBE is still tops, and its relational skills are superb. However, *Paradox's* development tools can't match *dBASE IV's*. If top speed is vital, *Paradox* may be the better deal, but departments that need to develop in-house applications should pick *dBASE IV*.

Paradox's screen and report generators have always been capable, but the latest versions are superb. You can now copy a form or a report to a new table, saving both time and disk space. *Paradox's* new business graphics module lets you easily create pie, line, bar, and stacked bar charts. Although not quite as gifted as Ashton-Tate's *Chart-Master*, *Paradox's* graphics come free, and you don't have to convert data base files. You can also graph *Paradox's* new cross-tabulation statistics, an analytical tool aimed at marketing departments. For example, you could quickly graph all sales according to buyers' state, sex, and ZIP code.

EXECUTIVE SUMMARY

dBASE IV 1.0

Relational data manager

With its excellent development tools, *dBASE IV* offers the best programming environment in the roundup, and casual users will be pleased with the new QBE and the report and screen generators. Despite fairly slow performance and awkward SQL queries, *dBASE IV* takes first place.

NSTL TEST REPORT

dBASE Trails the Pack

R:base for DOS 2.11 and Paradox 3.0 lead in report selection, and DataEase 4.0 takes the lead in transaction processing. dBASE IV leads the herd in file imports, but plods along in reporting tasks.

Import 50,000-record file

Report selection with an index

Methodology

All tests were conducted using a 20-MHz Compaq Deskpro 386 with 5MB of RAM, a 130MB ESDI hard disk, and a 256K extended memory disk cache. NSTL used a modified version of TP1, a standard developed out of a real-world situation in which a retail bank wanted to create a system with 10 million accounts, 10,000 tellers, and 1000 branches. The standard unit of transaction selected was debit/credit.

Import 50,000-record file

Import a 50,000-record delimited ASCII text file in the program's data base format. The data base structure was created prior to the import.

Report selection with an index

This benchmark reported 1000 records from the Account file in index order. Selection criteria were based on an index.

This benchmark repeated the previous report-selection test with selection criteria not based on an index.

Transaction processing with an index (large history file)

The Transact file was expanded from 1000 to 10,000 records, and then the TP1 benchmark was run with 1000 transactions. The Transact file therefore ended up with 11,000 records.

Paradox retains its lead in querying with QBE enhancements such as an explicit OR operator and an outer join query. The latter includes all records in the parent table, even if there's no matching value in the child. The new SET operator (lacking in *dBASE IV*) provides complete relational algebra, letting you define and query sets of records in QBE.

One notable advance in relational technology is the ability to pull data from as many as five tables into a form and quickly edit, add, and display the results. Thus you can combine a customer record and several customer invoices on a single screen. The real bonus: Changing data in a parent table automatically updates the child tables. For example, if you change the customer phone number on

the form, the phone number will change on all invoices for that customer. (*Paradox*'s rivals can display multitabled forms, but you can't change the data.)

Unfortunately, this feature can lead to lost data. For example, if you use the Edit mode to change a customer ID to an ID that already exists, *Paradox* tosses out the original record and its related invoice records. If you use Co-Edit, you're at least prompted, but you can end up with invoices attached to the wrong record. Borland is working on a fix.

cluding support for multitable forms and graphics, but development tools are wanting. There's still no compiler, the editor is primitive, and while the debugger is effective, it can't match *dBASE IV*'s. The application generator pales in comparison with *dBASE IV*'s and *R:base*'s. It's fast and simple but limited to building menus.

Despite its scant development tools, *Paradox* remains a strong contender. Programmers should go with *dBASE IV*, but many users may find *Paradox* a better fit.

Paradox 3.0

Relational data manager

Paradox 3.0 delivers plenty of user-oriented power with its slick relational operations, built-in business graphics, and cross-tabulation statistics. But despite swift performance, its relatively weak development tools and lack of SQL leave it a half-step behind *dBASE IV*.

R:base for DOS 2.11

In the not-so-distant past, *R:base* looked as if it could beat *dBASE* at its own game. It sported a muscular command language and the best application generator on the market. Today's *R:base for DOS* is no slouch—it offers fast performance, a SQL-like syntax, a template language, and for \$895 extra, an .EXE compiler. Hardened developers may nod in admiration, but end users are marooned with an archaic interface that often demands input at the command prompt. Worse, *R:base* lacks QBE, and the screen and report generators fail to match up.

R:base's highly touted prompt-by-example (PBE) feature is disappointing. PBE resembles *dBASE III*'s Assistant more than it

does QBE. Even simple queries are tedious—you must build one clause at a time from menu prompts and constantly reconfirm selections. To really tap *R:base*'s power, you must journey to the command line.

The screen and report generators are feature rich but difficult to use. They're easy for simple jobs, but try a halfway complex task—such as including fields from a different table—and you're forced to type in lengthy commands. *R:base* represents report

With a 1-2-3-like top-line menu and WordPerfect-like function keys, *Paradox*'s interface should be familiar to many users. Here, a user embarks on a QBE adventure, selecting fields with check marks.

R:base for DOS 2.11

A powerful tool for programmers, *R:base* still can't accommodate casual users. Impressive speed and SQL support don't make up for a stifling interface that demands a knowledge of command syntax for common tasks.

Like Paradox, R:base for DOS provides cross-tabulation, a statistical tool designed for marketing analysis. This analysis shows the total sales each employee made to each customer.

bands with two-letter codes, making it difficult to visualize the final layout.

As always, R:base's application generator is superb, rivaling dBASE IV's. You can easily define menus and link them with other screen objects, and the resulting application generates reusable code.

R:base's heavy-duty language is enhanced with 15 core SQL commands, and like Paradox, it includes cross-tabulations and a TALLY command that counts how often each value occurs in a given column in a table. However, the crude editor is limited to 750 lines per file, and the debugger can only catch syntax errors one at a time. If you develop large applications, buy Microrim's \$895 R:base Compiler, which includes a more powerful debugger and produces .EXE files.

Despite advanced features, R:base for DOS can't beat dBASE IV as a development environment or Paradox as a day-to-day data manager. However, its speed and SQL support should attract programmers.

DataEase 4.0

DataEase has staked its reputation on providing advanced relational powers in a friendly, completely menu-driven package. And this latest release offers some impressive enhancements: Users can manage one-to-many relationships (up to 32 tables) in a single on-screen form and perform multiple table joins simply by answering prompts. And DataEase's LAN support finally

matches its rivals'. But newcomers will eventually be frustrated by the program's quirky interface and lack of QBE; power users will definitely be put off by the scarcity of development tools.

DataEase 4.0 is initially inviting to beginners. Prompt-driven menus abound, and as in dBASE IV, associated objects are loaded when you open a data base. But frustration mounts quickly as you slog through the program's confusing combination of antiquated full-screen main menus, pulldown submenus, and inconsistently assigned function keys. Changing data bases in midsession is a convoluted multistep process, and you must convert data bases created with previous versions of the program.

Crafting data entry screens with DataEase is a mixed bag. It's far easier than with Paradox—you select the tables and fields from menus and move them around the screen at will. However, you can't use substrings in field definitions—to use an area code as the basis of a relation, for example, you would have to create a separate field.

DataEase's report writer is the worst in the roundup, and it's not even easy to use. You build reports by selecting field names from menus, but you must issue commands to specify the order of display and the group-

DataEase excels at creating data entry forms. You can easily include fields and records from multiple data tables on a single screen form.

ing level for each field. Don't expect lifelike page preview, either. Although it approximates report bands with codes à la R:base, to really see what's going on, you must print out the report.

However, there's no QBE or SQL, and the menu-driven application generator is limited. You build queries and applications with the DataEase Query Language (DQL), a thorny, verbose idiom that combines the worst of SQL and dBASE. You can construct queries

using menus, but only a clause at a time. You can't load or save ASCII files, so you're stuck with a crude editor. Fortunately, programmers can turn to a developer's edition for debugging and editing tasks, and later this year users will be able to query SQL data base servers with *DataEase SQL*.

DataEase 4.0 delivers remarkable power without the need for programming. Yet its awkward interface and the lack of QBE work against its strengths.

dBASE Rides Again

Both *dBASE IV* and *Paradox 3.0* succeed in balancing the rather schizophrenic demands made on today's data base managers. But although *Paradox* is faster and delivers potent features, including graphics and relational extras, its development tools don't match up. *dBASE IV* wins in a photo finish by matching *Paradox* in user-friendliness and delivering the best data base programming environment on the market. ●

Net Gains in Multiuser Accounting

Accounting software doesn't always get the scrutiny it deserves.

PC World puts seven multiuser accounting packages to the ultimate test—usability.

Why should you consider running an accounting system on a network? Well, if your day-to-day accounting is currently a one-person operation, you probably shouldn't. On the other hand, if several people are using a manual system or a time-share computerized system, converting to network-based accounting could increase efficiency. One employee could enter cash receipts while another entered invoices from suppliers. Beyond that, a third person could respond to inquiries from customers about account history, or from top management about interim financial results, without interrupting anybody else's work.

Multiuser accounting products look and act the same as their single-user versions. In fact, with all the products we tested—*Accpac Plus*, *Great Plains Accounting Series*, *Harmony*, *M.A.S. 90 Evolution/2*, *RealWorld*, *SBT Database Accounting Library (Series 6 Plus)*, and *Solomon III*—you can start with the single-user version and upgrade later, in most cases by installing a network manager module.

The only difference is the occasional 'You can't perform this procedure right now, be-

cause another user has access to that file' message. Though the tested programs implement their file- and record-locking routines in subtly different ways, the practical differences are minor.

All the products reviewed here deliver the accounting muscle you would expect from a powerful system. Distinctions show up mostly at the margins, in areas like recurring invoices and vouchers, password protection, reporting, and special convenience features.

Torture Testing on a Network

Most of the products tested are sold mainly through specialized dealers or value-added resellers, who charge thousands of dollars for installation and support. However, a business that has knowledge of DOS and accounting, and a spirit of adventure, will find that it is possible—although challenging—to do the installation in-house.

We simplified the process by installing and testing only the "big three" accounting modules: general ledger, accounts receivable, and accounts payable. But if the key to your accounting system lies outside this basic triad, see **TABLE 1** for a list of programs and prices.

To put the packages through their paces, we invented a fairly typical business scenar-

**Ralph
Soucie**

io, created a raft of test transactions, and entered them into each program. Next, we took each program through the full accounting cycle for a three-month period, including designing and printing an income statement. In stepping through this procedure, we noted the presence or absence of dozens of features; our observations are summarized in the Features Evaluation.

As we posted transactions, we saw that the programs use a variety of methods to trace transactions back to source documents; we noted several minor deficiencies (see the sidebar "What to Look For in an Audit Trail").

To simulate the way most accounting staffs work under typical office pressures, we deliberately avoided consulting the manual unless absolutely necessary. If a program wasted our time, it earned demerits; and we carefully evaluated the on-line help.

Not surprisingly, we found that the perfect accounting program doesn't exist. For the mythical average user, however, *M.A.S. 90* rates a Best Buy. But it faces stiff competition from *Accpac Plus* and *Solomon III* in terms of sheer power and from *Harmony* because of the latter's well-designed interface.

Accpac Plus 5.0

Computer Associates' *Accpac Plus* is a full-featured package that offers flexible reporting and some unique customization capabilities. It is also reasonably easy to use, although its power features are not always as accessible as they might be.

Installing *Accpac Plus* in single-user mode is generally easy, if a bit unorthodox. Company setup is a breeze no matter how many companies you have. Network installation is more straightforward than with most of the other packages.

Accpac Plus's pop-up menus are clear and intuitive. Nifty features include an on-line help system that is both context sensitive and indexed. *Accpac Plus's* Windowing System Manager contains a number of impressive innovations like task switching, macros, and custom-designed data validation.

The accounts receivable and accounts payable modules should work just fine for most users, but they are a tad less sophisticated than those of *M.A.S. 90* and *Solomon III*. *Accpac's* modules could also benefit from a stronger warning against purging transaction detail in accounts receivable and accounts payable before posting batches to the general ledger. Financial statements are extremely flexible, although setting them up is time-consuming.

Accpac Plus's large installed base among CPA firms testifies to the strength of its general ledger module. Power users will like the customization capability, and most users will be comforted by Computer Associates' size, strong earnings, and visible commitment to the accounting market. The accounts receivable and accounts payable modules, though, limit *Accpac Plus* to a tie with *Solomon III* for the runner-up slot.

Great Plains Accounting Series 5.0

Great Plains combines ease of use with fine documentation and versatility. In some areas, such as financial reporting, it is only an average performer, but it has no serious deficiencies.

Single-user installation is fast and painless, but network installation and setting up a second company are both a little confusing.

EXECUTIVE SUMMARY

Great Plains Accounting Series 5.0

Multiuser accounting software

Great Plains' fine documentation and technical support will appeal to less sophisticated users, and its ambitious account structure will be useful to large organizations. But its reporting isn't strong enough to challenge the leaders'.

Great Plains' account numbers are generous, enabling you to track performance by department and region and still use subaccounts. The system also lets you set up a wide variety of global preferences such as automatic decimal-point entry and suppression of pop-up windows.

Great Plains' system for handling transaction batches, combined with its function-level password security, facilitates control in businesses with large accounting departments. The program handles recurring batches deftly, and you can assign mnemonic names to batches.

Posting transactions in *Great Plains* involves more steps than in any of the other programs. All disbursements except manually written checks are posted via a separate menu item. When one person is doing this, other users are locked out of most program functions, a precaution that promotes accuracy and data integrity. Impatient types might chafe at such a regimented system, but posting goes much faster when the CPU is relieved of multiuser responsibilities.

Great Plains' accounts receivable module is solid, handling payment terms and sales commissions with particular finesse. One quibble, though—you can't place vendors on hold-payment status.

Great Plains' financial statement editor is just fine for meat-and-potatoes reporting, and it includes strong support for FASB 95 (Statement of Changes in Financial Position). However, unlike most of the other products tested, it can't store multiple statement formats without the optional report writer, and editing report specifications is not as convenient as it could be.

Great Plains earns a high rating for its excellent documentation and ease of use, but limited reporting puts it a notch below the top-rated products.

Harmony 2.1

Open Systems did a clever thing with *Harmony*: The company built in most of the features found in its more powerful competitors, sacrificing relatively minor refinements for

significant gains in ease of use. The result is an easy-to-use program that should satisfy most network users. At press time, Open Systems announced two new upgrades: *Harmony 2.2* and *Open Systems Accounting Software 3.5*, the company's more powerful product. *Harmony 2.2* will feature enhancements to the system manager and more financial reporting capabilities, among other additions.

Harmony's password security exemplifies the package's design philosophy. Although the program does not provide the security levels available in many other programs, it makes granting access to program functions

on an individual basis convenient enough that most managers won't notice the limitations.

Installing *Harmony* on a stand-alone machine and setting up multiple companies is easy, but network installation is complicated. However, *Harmony's* menus are readily understandable, and the program exploits the function keys better than any other product in the group.

¹⁰ Because SBT is written in dBASE code, the product can be extensively customized.

¹¹ Balance-forward billing is handled by dProfessional module only.

¹² Recurring batches can be assigned codes for selection purposes but are not automatically triggered by date.

¹³ The program can limit the number of times an entry can recur, but user intervention is required to trigger the entry.

¹⁴ Boilerplate text cannot be stored—it must be entered each time you print statements.

¹⁵ Only if you try to pay a vendor more than once in the same accounting period.

¹⁶ Holds payments on individual invoices only.

¹⁷ Many formats are provided, but unless the user's chart of accounts closely follows the numbering scheme in the sample data, extensive revision is necessary.

¹⁸ To be released soon.

Designing financial statements is easy, but your control over the content and appearance of the columns in the income statement is somewhat limited. More demanding users may have to resort to *Harmony's* \$99 word

processing module. *Harmony's* documentation deserves high marks for simplicity, although it is too lean in some spots.

Harmony's only serious drawbacks are the lack of a few power features and the relatively meager selection of optional modules.

M.A.S. 90 Evolution/2 1.0x

M.A.S. 90 features a well-designed menu system, a good all-around mix of features, and some important extras, adding up to one of the best values available for power-hungry users.

Installation and initial company setup are very easy, although setting up a second company is more challenging. *M.A.S. 90's* menus are the friendliest of the bunch, thanks mainly to their sensible, consistent terminology. The absence of such common terms as *post* and *batch* might cause traditionalists to lose their bearings at first, but the system is fundamentally sound.

General ledger account numbers can contain 9 characters and be divided into 3 segments. Account inquiry is superb. You can view activity by period (with optional comparisons to budget or prior-year amounts) or by transaction.

Password security is strong, supporting security groups. A faint discordant note,

The accounts receivable and accounts payable modules offer superb flexibility and power features. Moreover, of the tested products, *M.A.S. 90* is one of only two that include invoice printing in the accounts receivable module.

You can view general ledger activity in *M.A.S. 90* by batch totals (shown above) or by monthly totals in your choice of three formats. Note also the year-to-date activity totals shown near the bottom.

Financial reporting is also very strong. Though *Accpac Plus* and *Solomon III* are equally flexible, *M.A.S. 90* tops the field in automating the report design process. Its General Ledger Analysis Report, summarizing key comparative figures and ratios, is outstanding. Throw in the data base reporter that comes with the system manager module, and *M.A.S. 90* is the clear leader.

M.A.S. 90's on-line help is also tops, though more help screens in the financial report design area of the program would be welcome. On the whole, *M.A.S. 90* provides the best combination of power and convenience in this very competitive field, earning our Best Buy recommendation.

RealWorld 5.0

RealWorld is a capable package that has developed a strong third-party following. It offers the soundest audit trail and a wide range of options in all three modules. Single-user and network installation are both very easy, but adding a second company is a confusing process.

The current version of *RealWorld* adds optional pulldown menus to its old multilevel system. The menus are not as effective as *M.A.S. 90's* (too many options in the top level), but they improve on the old system's mainframe feel.

Generous spacing makes *RealWorld's* input screens easy to read, but you can see

In *RealWorld's* general ledger transaction inquiry screen, the <F2> key conveniently toggles between displaying the transaction description (shown below) and showing the source journal and reference number.

only one line of a transaction at a time. You can do partial-name searches, but lookup windows are not available.

On-line transaction inquiry screens are well designed and are available from the main menu of each module. The program offers more convenience than any other in keeping transaction history available for inquiry without wasting disk space.

One minor quibble with the multiuser version: If you pull up a record that's being edited by another user, you're not informed that that record is locked until you try to save your changes. When the record is released, you must reenter the changes—a real time waster.

Financial statement design, a weak spot in the previous version, has been shored up. Flexibility in specifying columnar content is still limited, but *RealWorld* supports FASB 95 very well. The concepts of report layouts and specifications may confuse new users initially, but the system is logical once it becomes familiar.

RealWorld has also added the ability to interrupt one process temporarily while performing another, somewhat like *Accpac Plus*. Trouble is, it's rather easy to exit the program accidentally while doing this. You can

SBT Series 6 Plus 6.2

SBT Series 6 Plus 6.2 is unique among the tested group in that it is written in dBASE code, making it easily customizable by knowledgeable dBASE consultants. It's also reasonably priced, especially if you already own dBASE, Foxbase, or Clipper. Unfortunately, *SBT* requires too many trade-offs in convenience to be recommended for general-purpose accounting.

SBT Series 6 is written in dBASE III Plus. However, using a special utility, it ran just fine in tests with dBASE IV; installation was complicated somewhat by the need to compile the dBASE IV code, though. A forthcoming upgrade, *Series 7*, will be written especially for dBASE IV.

EXECUTIVE SUMMARY

SBT Series 6 Plus 6.2

Multiuser accounting software

SBT is not as convenient as the other packages, so it's a serious candidate only for those who need special modifications that are not available elsewhere.

SBT's menus and input screens are not as intuitive as the other programs'. There are few submenus, and most main menu options lead directly to input screens. *SBT* also lacks on-line help and lookup windows.

SBT's account codes must contain at least 5 digits, which will annoy users who need only 3 or 4. Unlike all the other programs, *SBT* allows only one open period.

If you use dBASE IV and *SBT* on a network, speed is another problem. *SBT* accesses the disk much more frequently than the other programs and consequently was noticeably slower even on an 80386-based PC. However, the program is certain to run much faster if compiled by Foxbase or Clipper.

One bonus for purveyors of goods is *SBT*'s inclusion of invoicing and inventory control in the accounts receivable module. In the accounts payable module you can assign each vendor a payment priority code, which comes in handy when funds get tight.

Unlike most of the products tested, *SBT* can generate an automatic ratio analysis report. It does not provide a facility for designing custom financial statements, though naturally people familiar with dBASE can design reports to their heart's content.

SBT's overall design is mediocre, however. Unless you really need customization, you're better off with one of the stand-alone packages.

Solomon III 5.0

TLB's *Solomon III* is strong across the board, although it may not suit smaller users. An ambitious data base orientation makes for powerful reporting, and the program is also reasonably easy to use, thanks to logical menus and crisp documentation.

Solomon III's setup routine is tedious. By reading the manual carefully, you can get through setup without major problems, but chances are good you'll burn up your one free technical support call during this phase.

Solomon III was the only program that wouldn't run in multiuser mode on PC World's test network, which included Novell's ELS I network software (version 2.0a). TLB states that *Solomon III* is compatible with Novell's higher-level ELS II, Advanced NetWare, and SFT operating system versions.

ReaWorld,
M.A.S. 90,
and Solomon
III provide the
best blend of
error preven-
tion and
convenience
in their audit
trails.

What to Look For in an Audit Trail

Where did that number come from? Sooner or later, that question haunts every accountant, and the audit trail holds the answer.

A good electronic audit trail provides dates and unique system-generated numbers for tracing transactions in the general ledger report back to their source journals. All the packages we tested do this, with very minor exceptions.

Because the general ledger listing links your accounting records with the original source document, it's vital to print the listing as the transactions are posted. *Solomon III*, *M.A.S. 90*, and *RealWorld* emphatically require you to print the listings. However, several of the programs are surprisingly lax on this score. *Great Plains*, *Accpac Plus*, and *Harmony* let you post entries without creating hard copies of the related transaction listings. *Great Plains* and *Accpac Plus* allow you to print the listings to the screen. With *Harmony*, you can turn the printer off and quit the print procedure. *SBT* is even looser. It simply provides an option not to print the entries, although the general journal is automatically printed when you close the period in the general ledger.

All the packages produce useful, comprehensible general ledger reports. *M.A.S. 90* and *Accpac Plus* deserve special credit for showing summary batch totals instead of individual transactions. *SBT*'s general ledger, on the other hand, is a bit too summarized.

All told, *RealWorld*, *M.A.S. 90*, and *Solomon III*, in that order, provide the best blend of error prevention and convenience in their audit trails. The other programs performed satisfactorily with minor differences at the margins. *SBT*, because of the ease with which you can foil forced printing, trails the pack in this area. —R. S.

Users on small networks may be dismayed to learn that *Solomon*'s multiuser version requires a dedicated server.

Once you install *Solomon III*, you can't help but admire its sophistication. It blends good menus, on-line help, and documentation into a brisk, no-nonsense package.

Competitors like *Accpac Plus* and *M.A.S. 90* have as many features, but *Solomon III* distinguishes itself by the extent and variety of data it can capture. For example, *Solo-*

mon III has 70 fields in its customer records, whereas *Accpac Plus* has only 25. Moreover, *Solomon III* offers three optional modules designed to slice, dice, and reformat information from your accounting data base.

Though account numbers can contain two segments at most, any character in any account number can be used as a sort field, giving you tremendous flexibility in defining profit centers. *Solomon III*'s voracious appetite for information has a downside, though—it asks for a lot of input that may not be useful without such extra modules as Order Entry, Job Cost, or Sales Analysis. And while *Solomon III*'s menus are well designed, its input screens have a busy, congested look.

Validity checking is superb, but *Solomon III*'s finickiness can be frustrating. For example, the program occasionally took up to 30 seconds on a 16-MHz 80386 to respond to inappropriate entries in certain fields.

Solomon III's financial reporting is roughly on a par with *Accpac Plus*'s in flexibility and ease of use. *Accpac Plus*'s system may be a bit more convenient, but *Solomon III*'s financial ratios report balances that out.

Taken together, *Solomon III*'s documentation and on-line help are excellent, and if yours is a highly structured outfit that plans

EXECUTIVE SUMMARY

Solomon III 5.0

Multiuser accounting software

Solomon III's turf is the power user. If carefully cultivated, its data base yields a rich harvest of financial information. However, small-network users may get bogged down by the program's complex input screens and its requirement of a dedicated server.

When investing in Accounting Software, it's wise to seek a second opinion.

Or two for that matter. Especially when they're from two respected sources of product evaluation.

"Comprehensive and well designed, Macola Accounting Software is at the top of its class."

— PC Magazine

No matter the size, growth remains a common denominator among today's companies. Investing in Macola Software is the choice for companies that plan to grow... but don't want to outgrow their accounting software. Here's why:

Flexible and Feature Rich. Macola's system is modular so you can add more capabilities as your needs grow. Choose from 17 integrated packages, including General Ledger, Accounts Receivable, Accounts Payable, Payroll, Assets/Depreciation, Inventory Management, Customer Order Processing, Purchase Order and Bill of Material. Plus, there's a fully integrated manufacturing system, and a Report Writer for customizing reports.

"Macola... is well suited to many different businesses with varying levels of accounting complexity... offering a mix of features and flexibility not seen in most systems."

— PC Magazine

Management Reporting For Informed Decisions. Managers need better information on their departments to improve efficiency. Unique reporting capabilities are built-in to Macola, with a host of customizing options to meet your specific requirements.

"Macola's technical support, documentation, and customization assistance meets the high standards set by the software."

— PC Magazine

The Best Multi-User Compatibility. No other software can match Macola's 18 years of experience in mini and micro Local Area Network (LAN) environments.

"Macola is the best LAN-based accounting product."

— LAN Magazine

Speed and Data Integrity. Macola is the only high-end accounting software written in Micro Focus COBOL... for maximum speed and data integrity. Source code is available.

"The package is fast in both stand-alone and network versions."

— LAN Magazine

The Bottom Line. Macola is a wise investment. All major accounting firms recommend the software. But PC Magazine said it best when they gave Macola their last Editor's Choice designation for accounting software. "Managers of growing businesses... can be confident that their companies will not outgrow the software."

If Macola sounds like the kind of accounting software you want working for your company, call us today toll-free for more information and a personal demonstration.

*Accounting Software
You'll Never Outgrow.*

on using at least six modules, *Solomon III* bests the field in terms of total automation. But the program's officious demeanor and requirement of a dedicated server for multiple users prevent it from challenging *M.A.S. 90* for a Best Buy rating.

A Tough Race Between Top Contenders

M.A.S. 90 is proficient in every area, with flexible reporting and overall ease of use that earn it our Best Buy. *Solomon III* is equally powerful, but its network hardware requirements render it less suitable for smaller accounting departments. *Accpac Plus's* customization capability should be a big hit with people who take the time to use it, though the program's unambitious accounts receivable and accounts payable modules might leave some users wanting more.

The other four products are less powerful and have more limited appeal. *RealWorld's* major strengths are its large selection of third-party modules and its custom menu capability. User-friendly *Harmony* is a superb choice for users who don't need the power of the leaders; it yields a slice at the top of that range to *Great Plains*, which combines sophisticated batch handling with fine documentation but can't quite match the power of the leaders. *SBT* is the fallback choice for users whose special needs preclude broad-spectrum accounting products and whose budgets rule out a completely custom-designed system. ●

Groupware: E-Mail Meets Scheduling

**If LAN E-mail isn't enough,
and you need group scheduling
and productivity tools,**

**welcome to the brave new world
of groupware.**

Linking the members of a LAN work group productively is a bigger job than coupling LAN cards and cables. This is the challenge taken up by a new category of LAN software called *groupware*.

Future groupware packages such as Lotus's *Notes* promise a variety of work-group productivity aids, including project tracking, document processing, and on-line conferencing. Today's fledgling contenders take a more modest approach. LAN E-mail packages at heart, they integrate group schedules, personal calendars, and other utilities to help coordinate meetings and keep projects on track.

All the packages reviewed here were judged according to two major criteria. First, they should offer strong messaging features—E-mail is crucial to any LAN. Second, they should streamline scheduling and project tracking, by means of either a group scheduler or taut integration of E-mail and personal calendars. After that, the more desktop accessories the merrier, as long as they don't slow performance, increase price, or make the program difficult to use.

If your department thrives on impromptu meetings, each with a different focus and

cast of characters, group scheduling can be a strategic advantage. You can avoid postponed or poorly attended meetings and cut down on the message traffic involved in coordinating schedules. Three of the packages reviewed here—*Higgins 2.2* from Enable Software, *Office Works 1.1* from Data Access, and *WordPerfect Office 2.0* from WordPerfect—include group schedulers that let members view other members' calendars (without revealing personal details) and select a mutually convenient time. A good scheduler automatically posts invitations, sends responses back to the originator, and updates attendees' calendars. It should also schedule such resources as conference rooms, visual aids, and company cars.

If your schedules are less extemporaneous, Action Technologies' *The Coordinator II 1.1N* may be more suitable. It lacks group scheduling, but a tight fit between messaging and calendaring almost takes up the slack. For example, date-sensitive requests and meeting invitations automatically update personal calendars. *The Coordinator II* also provides greater privacy. (If users are so uneasy about exposing their appointments that they maintain a second calendar secure from prying eyes, a group scheduler becomes counterproductive.)

**Paul
Christiansen,
Steve King,
and
Mark Munger**

E-Mail Comes First

Scheduling may be the soul of groupware, but electronic mail is its heart. If like most users, you're counting on groupware to pull double duty as your E-mail workhorse, messaging features have top priority. If you don't need scheduling and other extras, you may be better off with the superior E-mail skills of standard packages such as *cc:Mail* or *The Network Courier* (see "LAN E-Mail: Power to the Work Group," *PCW*, November 1988).

Fortunately, all the programs reviewed here supply enough E-mail power to meet most needs. All let you send and receive messages, set up private and public mailing lists, forward and reply to mail, copy yourself and others, and attach formatted files. Some programs store messages in electronic folders—portfolios of related messages. Others lack in-box folders, but you can archive messages to disk files and affix keywords for easy retrieval. Some programs offer phone

message forms so an operator can deliver messages instantly; others notify you when the recipient has read your message.

However, groupware's E-mail talents still need refining. None let you send blind carbon copies, generate graphics, or record and annotate captured screen snapshots as you can with *cc:Mail*. None of the text editors can compete with *cc:Mail*; some lack cut and paste, and others, automatic reformatting. Unlike most E-mail packages, none provide RAM-resident utilities to swap mail from within another application. However, all provide macros that let you switch to and from another program quickly, so when you receive a formatted file, you can view it in its native format. And all but *Office Works* come with TSRs that beep within other programs when mail arrives.

If you want to exchange mail with the outside world, only *The Coordinator II* and *Higgins* can match standard E-mail. Both link LANs that use the same groupware, swap mail with off-site modem users, and offer

gateways to external mail services such as MCI Mail and IBM PROFS. All but *WordPerfect Office* can send faxes.

Because E-mail is the logical home base for LAN users, having some *SideKick*-like

utilities at the ready is a plus. Some groupware packages offer multiuser Rolodex-like card files, document indexing and retrieval, and accessories such as calculators and ex-

pense reporters. Yet an easy interface is more crucial than a bundle of accessories—because groupware is used regularly by both novices and power users, an intuitive interface is vital.

WordPerfect Office 2.0

Take the *WordPerfect Library*, add superior E-mail and group scheduling, and you've got *WordPerfect Office*. It's a must for *WordPerfect* LANs, and it's a good deal for anyone who craves utilities. Although it lacks connectivity options, and for most LANs it's twice as expensive as its rivals (\$495 for the server and \$195 for each user), *WordPerfect Office* is the best value in the roundup.

WordPerfect Office provides impressive data integration with other applications. Each function is a separate program, but they're neatly linked through a menu front end. This 46K TSR lets you cut and paste between modules and with any *WordPerfect* program or other supported package such as *1-2-3* and *dBASE IV*. The other groupware programs let you create macros that jump to another application and back, but *WordPerfect Office* is the only one that lets you hot key to a particular location and return to the

EXECUTIVE SUMMARY

WordPerfect Office 2.0

Groupware package

WordPerfect Office delivers the best mix of E-mail, scheduling, and productivity tools in the roundup. Its macro links to other *WordPerfect* products make it a gem for *WordPerfect* LANs, and other users will appreciate the excellent group scheduler. Only a high price and lack of connectivity keep it from earning a Best Buy.

place you left off. Also, you can share macros with any *WordPerfect* application, and you get macro and programming editors.

The function-key interface is pure *WordPerfect*, a stretch for novices, but efficient once you get the hang of it. Fortunately, you're aided by on-line help, descriptive prompts, and a superb manual.

The group scheduler is the best in the roundup. You can select and modify an E-mail list for your meeting group and view personal calendars in a bar graph matrix. Appointment details are hidden, but time blocks are public. The program suggests a conflict-free time and posts invitations automatically. Acceptances update personal and group schedules, and the originator receives a confirmation. Any user can view meeting schedules set for a group, along with associated resources such as meeting rooms or equipment. The resource scheduler is the best reviewed, letting you assign usage priorities to users. It's the only package that lets you attach messages and files to meeting invitations, so attendees can arrive well prepared with agendas and background material.

WordPerfect Office's E-mail is limited by poor connectivity, yet its messaging skills are the best in the roundup. Like *cc:Mail*, it provides bulletin boards—public folders that offer a rudimentary form of on-line conferencing. The text editor, a scaled-down ver-

WordPerfect Office's personal calendars include to-do lists in addition to a standard appointment log.

With The Coordinator II, you can trace the history of all messages related to a particular project.

sion of *WordPerfect*, is mediocre (although better than its rivals), and mail management is limited—you can save mail in folders, but you can't sort it or archive messages.

The productivity utilities are tops. The multiuser card file lets you mail merge easily with *WordPerfect*, the calculator is excellent, and the DOS shell offers all the power of *Xtree Pro* without the graphic tree.

No *WordPerfect* LAN should be without *WordPerfect Office*, and the judicious mix of messaging, scheduling, and desk accessories will benefit most other LANs. Unfortunately, the inflexible pricing scheme and lack of external links make it a poor match for large networks.

The Coordinator II 1.1N

Unlike its rivals, *The Coordinator II* forces users to adopt a highly structured messaging doctrine. Every message must have a goal and a deadline, so you're constantly prodded to keep the work flowing. It's a tough row to hoe, but the productivity benefits are real. Although *The Coordinator II* lacks a true group scheduler, its strong link between E-mail and calendars helps streamline work-group planning. The price is high for small LANs but reasonable for larger networks—\$995 for 10 users, \$1995 for 30, and \$2995 for 50. Despite the lack of extras, *The Coordina-*

tor II's excellent messaging features place it a close second.

The Coordinator II formalizes E-mail conversations, making users take responsibility for their actions. E-mail is based on a standard set of message types, including requests, promises, and speculations. Depending on the type, the program generates a boilerplate opening that you can edit or erase, along with dated fields where you enter deadlines. The process drives your conversations toward a goal, but if you're not ready for this exacting discipline, you can turn off the message types and swap regular E-mail.

You can easily monitor projects, plan for meetings, and trace conversation threads back to their origins. For example, you can save all messages traffic linked to a specific project, either in folders or printed out as a status report.

Because you can't view your associates' calendars, it's more difficult to schedule meetings. However, you're kept up-to-date on key events. Your calendar is updated when you receive dated requests, and you can attach messages to scheduled appointments. The six-week calendar includes the usual monthly, weekly, and hourly entries as well daily to-do lists.

EXECUTIVE SUMMARY

The Coordinator II 1.1N

Groupware package

With its unique E-mail approach, *The Coordinator II* takes time to learn, but it can boost productivity. Good E-mail features, excellent connectivity options, and a tight integration of messaging and personal calendars offset the lack of a group scheduler.

Create your own programs.

Or recreate ours.

Introducing The Clarion Personal Developer. A program generator for the non-programmer.

Clarion's Personal Developer is a software package that lets you conceive and create your very own programs. Or customize the eight applications that come as part of the Personal Developer package.

So you no longer have to settle for someone else's idea of how to manage your files. Or track your investments. Or process your orders.

Screens like you like 'em. Calculations without equal. Reports worth writing home about. All without writing a single line of code.

Quick. Start.

With Personal Developer's Quick-Start module, fill in the blanks on a single screen, and in minutes you have created your own complete, running applications.

For more complex applications, Quick-Start develops a powerful foundation you can always embellish.

Remember fingerpainting?

If a magenta menu is on your menu, indulge yourself. Make a screen green. Or create a scrolling look-up you'll like to look at. Even screens in monochrome never looked better.

With Personal Developer's palette, you'll make programs that are as beautiful on the outside as they are on the inside, modify them whenever you want – and have fun doing it.

What's beauty without brains?

Personal Developer lets you do things only a programmer could do before. Relate data from multiple files. Incorporate locate and filter functions. Use computed fields, memory variables and "hot-keys." Even produce customized reports and forms.

Eight ready-to-run applications – as is, or as you like 'em.

Use them right out of the box. Or use them as models for programs you'll create with Personal Developer. Or use Personal Developer to change them, rearrange them, and turn them into a library of proven programs tailored to your needs.

Copy and distribute free.

Every program you create with Personal Developer can be copied and distributed at absolutely no cost. So you can give them away to your close friends – or work out different arrangements for your not so close friends.

But first, you'll have to contact your Clarion dealer. For the one nearest you, call toll free, 1-800-354-5444.

The interface is superb, offering a 1-2-3-like command line and well-designed menus and dialog boxes. You can start with a novice menu mode and move to a more detailed system augmented with hot keys. Unlike its rivals, *The Coordinator II* lets you split the screen and toggle between tasks. You can view your calendar while reading a message, for example, or read a message in one window while replying in another. However, the documentation is poorly written, and technical support costs extra.

The basic E-mail is capable but lacks return receipt and phone message forms. More limiting, you can attach only one file per message. However, you get excellent mail-sorting options, and connectivity is the best in the roundup. *The Coordinator II* includes Action Technologies' Message Handling Services (MHS), a protocol that's rapidly becoming an E-mail standard. With MHS, you can swap mail with other LANs running MHS-compatible packages such as *cc:Mail*, *Framework III*, and *Advanced NetWare*. You can also link two *Coordinator* LANs and buy options for remote access, fax transmission, and gateways to other services.

The Coordinator II takes time to master, but its intuitive interface smooths the way. A group scheduling option should be out by the time you read this, but even without it, the program is a good value.

Higgins 2.2

Enable Software's *Higgins* supplies solid E-mail and includes such extras as an expense reporter and document indexing. At \$995 for 20 users, the price is right, but a weak menu system and group scheduler strike a sour note.

Higgins uses a 1-2-3-like top-line menu, but execution is awkward. For example, to edit a field such as a calendar entry, you have to select the field, then select Modify from another menu, and then do your editing in a separate window.

The E-mail feature is first-rate. It excels at message management, giving you thorough headers with flags for private and ur-

gent notes. *Higgins* offers a dual-password system: You can share one password with a secretary but use a second password to view files marked private. TSRs beep within other programs when you receive an urgent message or have an appointment.

You can't store messages in folders, but you can easily archive messages and attach keywords and other labels for later retrieval. You can also index any file on your PC and store it locally or on the server. You can tag and search messages by type, but unlike with *The Coordinator II*, you don't get canned openings, message threading, or calendar updates.

The five-week calendars deliver the best to-do lists in the roundup. You can assign priorities to items, attach to-do lists to schedules, and sort by project, due date, or status. However, the group scheduler is primitive. You can easily select invitees and view their calendars (details excluded) in a matrix, but you must study the matrix for conflicts and select a time yourself. Once you do, you have to switch to E-mail and send out invitations manually, and recipients must respond and update their calendars on their own. You can schedule resources, but you can't assign resource priorities to users.

Unlike its rivals, which keep calendar details private, *Higgins* allows managers to

Higgins' personal calendar offers several levels of detail to keep track of your schedule.

snoop. With the proper password, you can reach across the LAN to view any details that aren't specifically masked by the user.

Higgins' address data base is superior. It's the only program that lets you attach to-do lists, messages, faxes, and formatted files to names so you can view all elements linked to an individual. Higgins' respectable expense report utility is unique in the roundup. You can attach expense items to any log item, search items, and print out reports.

Higgins offers ample external links, provided you invest \$1595 in Higgins Exchange. This program links two Higgins LANs and lets you use extra-cost options for remote access, faxes, and gateways to other services.

Despite its rich mix of features, Higgins' cumbersome interface hinders operation, and the group scheduler is rudimentary. Version 2.3, which should be ready by the time you read this, promises a vastly improved scheduler.

Office Works 1.1

Office Works delivers capable E-mail and group scheduling along with an address data base and document indexing. And at \$495 for six users and \$1395 for unlimited access, it's a bargain. However, Office Works lacks advanced features such as to-do lists, connectivity, and personal utilities. Most LAN users will want more.

The 1-2-3-like interface is perfect for novices, offering intuitive pulldown menus and

dialog boxes. The documentation is tops, and an on-line tutorial and contextual help further aid new users. However, Office Works lacks built-in hot keys, and because it was written as a run-time application using Data Access's DataFlex data manager, it feels sluggish.

Messaging is solid, with extras like priority and confidentiality classifications. Yet, the only outside link is a send-only fax and telex feature. Like Higgins, Office Works lacks message folders, but it lets you index messages and files and store them locally or publicly on the server. However, its document control is not as sophisticated as Higgins'—to index formatted files you have to reenter basic DOS information instead of just marking files to be archived.

Office Works' group scheduler offers the most privacy in the roundup—you can't see time blocks on other calendars. To set up a meeting, you enter a time range, and the program invisibly selects the time with the fewest conflicts. As with WordPerfect Office, invitations are posted and calendars updated automatically, and the originator receives a reply.

As you dig in, however, you feel the lack of depth. Unlike with WordPerfect Office, you

When it comes to accounting software, no one offers you more for your money than Peachtree. Now we're offering you two ways to buy our best-selling accounting software — and two great ways to save.

Peachtree Complete™ II is our premier business accounting system. Designed and sold as a \$5,000 accounting system, the latest version of Complete II represents a vastly expanded and greatly improved package that sells for an unbelievably low \$199. Find out what over 250,000 satisfied users already know — no other accounting system offers so much for so little.

And now, for businesses who want to make the most of their accounting information, Peachtree's Double Bonus Bundle gives you Peachtree Complete II Accounting plus its own custom reporting tool, Peachtree Data Query II™ Enhanced. The Double Bonus Bundle includes both systems — regularly priced at \$199 each — for just \$298. That's

a savings of \$100! Either way, Peachtree offers you the most accounting you can get for your software dollar.

Peachtree Complete II is a comprehensive accounting system developed to meet the needs of small- to medium-size businesses. It comes with eight high-power modules that may be used individually, or fully integrated for maximum accounting efficiency:

- General Ledger
- Accounts Payable
- Inventory
- Fixed Assets
- Accounts Receivable
- Invoicing
- Job Cost
- Payroll

And Peachtree Complete II is designed using the latest software innovations, like full-color scrolling reference tables, pop-up windows, and short-cut keyed menus. We've expanded to allow an unlimited number of companies, added service invoicing, range printing, and more.

Peachtree Complete II's error handling is quick and easy, with plain English messages and suggestions. Context-sensitive Smart HELP is on-line, all the time. And as always, Complete II comes with the most thorough documentation — a separate quick-start Installation Guide, Accounting Primer, seven-volume Reference Library, and extensive on-line tutorials on each module — all at no extra charge.

Now you can extend the power of your Peachtree accounting to include custom reporting and analysis, and save even more money! Order the Double Bonus Bundle and you'll get Peachtree Complete II, plus Peachtree Data Query II Enhanced, for just \$298.

PDQ lets you turn raw figures into highly sophisticated reports, allowing you safe, easy access to valuable information from all eight Peachtree Complete II modules. PDQ's simple, clear approach gives you maximum control and flexibility. You tell PDQ what information you need, and PDQ looks through your accounting files, finds it, and presents it to you any way you want it — on screen or printed, as a graph, in report form, or ready for export to another software package.

You can begin creating reports in just minutes, thanks to all new user instructions and on-line practice sessions that lead you through the system and build confidence as you go. With Peachtree's Double Bonus Bundle, accounting and custom reporting go hand-in-hand, and that makes good business sense.

MONEY BACK GUARANTEE. We stand behind Peachtree Complete II and PDQ II with a toll-free hotline for technical support (\$1 per minute, \$20 minimum on your credit card) and a 30-day money-back guarantee when you buy directly from Peachtree. can't schedule resources or attach messages to schedules, and the masking of time blocks makes it harder to schedule optimum times. In addition, the calendar is the weakest in the roundup. Although expensive, it's a dream for *WordPerfect* LANs and recommended for any work group that doesn't need links to the outside world. *The Coordinator II* takes second place, offering top E-mail skills and a novel approach to work-group integration. How-

ever, if you don't have the patience to adopt a new organizational model, look elsewhere. *Higgins* comes in third—although loaded with features, it suffers from a weak group scheduler and an awkward interface. The inexpensive *Office Works* is a good choice for novices, but it lacks sophistication.

The rise of groupware puts pressure on dedicated E-mail packages such as *cc:Mail* to offer more productivity aids. If these groupware packages boost their E-mail skills a notch, they may dominate the LANs of tomorrow. ●

Paul Christiansen is a principal in Vortex Data Systems, a San Diego-based firm specializing in high-end networks. Steve King is a program analyst for a state agency and moonlights as a computer consultant and writer. He co-wrote The DataFlex Developer's Handbook (WordWare Publishing, Plano, Texas, 1987). Mark Munger is also a principal in Vortex. All three wrote the NetWare Administrator's Handbook, to be released in September by Tab Books' Windcrest label (Blue Ridge Summit, Pennsylvania).

PC Cool.

Make code, not war.

(Or, tune in, turn on, boot up.)

Exactly twenty summers ago, thousands of two-legged creatures of the so-called "hippie" persuasion converged on a farm near Woodstock, NY (pop. 8,000) for three days of peace, love, and rock and roll. In a similar vein, a few four-legged creatures of the "furrie" persuasion converge every year on Marlow, NH (pop. 559) for their own festival of freedom. For while it's true that most survivors of the 60's have chained their unbridled spirits to conventional 9-5 jobs, our eternally-hip, and decidedly long-haired mascots continue dancing to the beat of a very different drummer.

Buy, with a little help from your friends.

In the 60's, many people explored the wonders of the universe with mind-altering drugs. Today, most people rely on mind-bending micros. Admittedly, it's safer to artificially expand your memory board than your consciousness. Nevertheless, it's still wise to have an experienced

guide when exploring the complex wonders of PCs, XTs, and ATs. Which is why we maintain a crack crew of drug-free technical specialists (many of whom were mere toddlers in 1969) to guide you through every step of your computer path. Whether you want speed, power, or maybe just to see more of those pretty colors...strictly for business reasons, of course.

You probably think this ad is about you. Don't you?

Well-Rounded Drawing

**Need a new corporate logo, a
diagram of your newest widget,
or a sophisticated brochure?**

**The latest draw programs
offer artists and nonartists alike
the best tools for the job.**

Graphics created on the PC look jaggy and crude, right? That's certainly been the perception, and for good reason. The bit-mapped paint programs on the market just don't deliver the control, flexibility, and high resolution that business users, designers, illustrators, and desktop publishers demand.

But the object-based draw programs reviewed here—*Adobe Illustrator*, *Arts & Letters Graphics Editor*, *Corel Draw*, *Micrografx Designer*, and *GEM Artline*—make it easy for nonartists to create professional-looking flowcharts and diagrams annotated with sharp text. Combined with a little artistic talent, the programs work wonders for technical illustration, graphic design—even fine art.

Drawing Versus Painting

Paint programs, unlike their draw cousins, treat images as a collection of pixels. Draw a black square in a paint program, and you're really just turning on a bunch of dots. If you draw a red square on top of the black one, you eliminate the black square. You can't select it, change its color, or move it in front of the red square because it no longer exists.

Worse, the quality of the printed image depends on the resolution of the painted bit

map. Print a 300-dot-per-inch (dpi) bit map on a 1270-dpi Linotronic and it looks the same—jaggies and all. Stretch or expand a bit-mapped image, and the pixels that define curved and angled lines grow as well, resulting in enlarged jagged edges.

By contrast, draw programs work with resolution-independent objects—circles, squares, blocks of type, flow-chart symbols, complex curved shapes—defined by mathematical equations. Because the objects aren't composed of pixels, they print at whatever resolution your output device produces. You can move the objects around, lay them on top of each other, break them apart, and align, rotate, skew, and flip them. You can change the thickness and color of object outlines, and fill objects with colors, shades of gray, and patterns.

New Tools, New Horizons

Until recently, creating and manipulating curves was either impossible or not worth the frustration. But new programs provide a variety of amazing tools for working with Bezier curves. Complex shapes composed of Bezier curves, as opposed to simpler spline curves or vectors, are easier to create and modify. All five programs reviewed here let you control a Bezier shape using knitting-

*Steve
Roth*

needle-like handles attached to points on the curve called control points.

The programs differ, however, in how they let you create curve-based images initially. Auto-tracing is the easiest method—you load a scanned image, clip art, or another bit-mapped image into the program, which traces it for you. If you don't have a template, or if your program, like *Arts & Letters* or *Artline*, doesn't auto-trace bit maps, the best way to draw curves from scratch is directly with a curve-creation tool. Direct curve creation is confusing at first, so all the programs except *Artline* let you use an on-screen pencil to draw a freehand line, which the program transforms into Bezier curves. Drawing freehand can be awkward, though, and you usually have to spend a lot of time adjusting the resulting curve.

Other Essential Tools

A draw program should also make it easy to create geometric shapes like squares, circles, and polygons. *Designer* is tops in this area, offering tools for drawing pie charts, arcs, and rounded-corner rectangles. *Arts & Letters* makes things difficult, requiring you to load even squares and circles from a symbol library.

All of the reviewed programs contain libraries of simple shapes and symbols. These collections are more useful than the complete illustrations you often find in clip art packages because you can easily edit basic shapes and group them together.

Another feature to look for in a draw program is type handling—the ability to create and manipulate text in a variety of typefaces, styles, and sizes, and to adjust line spacing, letterspacing, and kerning. *Corel*

Illustration created and color separated in Micrografx Designer 2.0 and produced on a Linotronic 300.

Draw leads the pack with lots of typefaces and easy, complete type controls.

No draw program is an island—desktop publishers need to import and export images on a regular basis. None of the programs are universally fluent, but *Designer* offers the most import/export choices. Another solution is to cut and paste images via the *Windows* clipboard; while all of the reviewed programs except *Artline* run under the *Windows* environment, only *Designer* and *Arts & Letters* let you cut and paste to and from other programs through the clipboard.

Separate preview and edit modes are also key features to look for. Edit mode displays outlines of objects without the fills and line styles, making it easy to manipulate the individual elements of a drawing. Preview mode shows the drawing as it will look when printed but redraws slowly after changes. *Designer* and *Artline* don't offer a preview mode (*Designer*'s layers, however, let you isolate objects, and *Artline* lets you turn off fills, for easy editing); *Arts & Letters* lets you toggle between modes. *Illustrator* and *Corel Draw* offer a two-window setup, but only *Corel Draw* automatically updates the preview window's display as you make changes in the edit window. Being able to

undo the last operation performed helps—something only *Designer*, *Illustrator*, and *Corel Draw* allow.

All five programs offer color output, but that isn't too important for most desktop folks. Grays are another story. Look for a program's ability to specify gray percentages for lines and fills. For really fancy graphics, you'll want special-effect patterns and fills and the ability to use objects as cookie-cutter-like masks.

Power and Its Price

The power these programs wield exacts a stiff hardware price. To use any of them effectively, you need an EGA or VGA display and a 286 or 386 machine. *Artline*, the fastest of the reviewed programs, is barely tolerable on an XT. *Illustrator*, the slowest, bogs down on all but the speediest 386s. And to see many of these programs' nifty graphic effects on hard copy, you'll need a PostScript printer.

Micrografx Designer 2.0

Micrografx is the old hand at PC draw programs, and their experience shows. Geared mainly toward technical illustrators and business graphics users, *Designer* offers an easy-to-use image manager and more tools for drawing geometric shapes than any of its competitors. Unfortunately, the program comes up short in the curve and type handling that artists and designers need.

Designer's Array feature lets you replicate objects with movement, scaling, and rotation set for each successive copy.

EXECUTIVE SUMMARY

Micrografx Designer 2.0

Draw program

Limited type handling and curve manipulation and lack of skewing are impediments, but *Designer*'s modifiable toolbox goes on forever. It's the best choice for technical illustrators and

general business users.

Corel Draw's special effects include graduated fills and masking—you can even use type as a mask. The program's impressive curve controls pop up when you double-click on any curve control point.

You can add or remove *Designer's* toolbox icons for a custom interface that fits your work habits. Beyond the usual boxes and ovals, the program lets you create arcs, polylines, pie charts, and more. You can create airbrushlike graduated fills and generate color separations of images for offset printing. If you get lost, <F1> brings up comprehensive, hypertext-laced on-line help.

The program's symbol libraries come stocked with lots of useful symbols, and image management is a breeze. You can visually store and retrieve symbols—even whole drawings—by opening a library window on top of the main workspace, then cutting and pasting. You can also retrieve images using plain English identifiers like "Left-Handed Monkey Wrench."

Designer has no exclusive Bezier curve tool but offers good auto-trace and freehand tools for creating curves. However, you can't combine two curves into one and then reshape the resulting curve—a must for logo designers.

When it comes to type, you can control size and line spacing but not much else. No typeface outlines come with the program, so you can't reshape letterforms, although you can scale, mirror, and rotate them for PostScript output. You can't specify different outlines or fills for letterforms, and there's no skewing tool for adding perspective effects.

Designer has some other minor but important features: It's the only program besides

Illustrator that displays an object—rather than an empty frame, or *bounding box*—as you move it; that automatically scrolls when a tool hits the edge of the window; and that consistently stops image redraw when you issue another command. And vector clipping, which masks hidden areas of a drawing, makes *Designer* the program for plotter users. Despite its premium price, *Designer's* top-notch tools make it a Best Buy for technical and office illustrators.

Corel Draw 1.0

Corel Draw is the top choice for artists and designers. It offers first-rate type handling and an abundance of special effects—although many require a PostScript output device.

Type is where *Corel Draw* really shines. The program comes with 24 popular text and display typeface outlines that include bold, italic, and bold-italic variations. Unlike *Designer*, *Corel Draw* can convert any letter-

DacEasy's Disk
Speedup Program,
Absolutely Free!

(A \$69.95 Retail Value)

Version 2.0 of Lucid 3-D is more than a bag of new features. It's a masterwork! The original Lucid 3-D captured the industry's attention with its simple to use, yet remarkable three dimensional capabilities. Last year's winner of *PC Magazine's* Award for Technical Excellence, Lucid 3-D is fast, even on a 256K, 8088 computer. Lucid 3-D is the super spreadsheet that doesn't require a super computer!

DacEasy is proud to produce this leading edge product. Its innovative design allows first time users to learn quickly while power users of other spreadsheets move to our advance features effortlessly. The Lucid 1.0 featured pull-down menus, optional instant command keys, multiple windows, a notepad in every cell, optional ram, total

"Lucid is a spreadsheet for our times. It is technical tour de force in an era that seems to have forgotten how to write tight code." PC MAGAZINE

"You might think that a RAM resident spreadsheet would necessarily be limited in features. We found that Lucid 3-D is anything but limited in power." INFOWORLD

"Lucid 3-D is a package that could alter the face of future spreadsheets. It offers residence, multiple windows, colour, mouse support and rapid execution." PC USER

Version 2.0 is Even More Amazing!

Create bar and pie charts; line graphs and more, directly from your spreadsheet.

You can open unlimited windows (up to nine on a screen) in different directories, drives, & 3-D levels.

Lucid 2.0 has vastly improved speed of recalculation of 3-D models due to the minimal 3-D recalc. Huge multi-megabyte models with complicated linking

which would have taken over an hour now takes less than a minute! Version 2.0 can now accept files as big as RAM (up to 8 megabytes) with models as large as allowable disk space. Lucid 2.0 can now read and write 1-2-3 and dBase files directly.

mouseability and both a reference and tutorial manual. These features alone make this spreadsheet a must buy. It's no wonder Lucid 3-D was voted Editors' Pick for 1988 by *Home Office Computing*.

Try Lucid for 30 days and if you don't agree it's remarkable, simply return it for a full refund...and keep Lightning as our gift!

We are so confident that you will love Lucid 3-D we are willing to give away the best selling disk speedup program in history. Just recently reviewers in InfoWorld gave Lucid 3-D, Version 2.0, the Excellent Value award. If you act now you can get Lightning, the program that makes every computer faster, using only 8K of ram

reviewed programs'. Unfortunately, *Corel Draw* lacks a direct curve-creation tool. You're limited to auto-trace or freehand curve creation, so you'd better have a bit-mapped template or a steady hand. Also missing are tools for creating geometric shapes beyond simple ovals and boxes, and the paltry clip art consists mostly of cute interoffice memo-type images. But *Corel Draw*'s impressive ability to import .ART PostScript files means you can tap the wealth of *Illustrator* clip art on the market.

EXECUTIVE SUMMARY

Adobe Illustrator 1.0

Draw program

A basic toolbox and well-organized keyboard/mouse commands are just right for professional illustrators. Curve creation is the best around, but *Illustrator* is too slow on a normal AT and needs a PostScript printer to output high-resolution images.

Adobe Illustrator 1.0

Illustrator on the Macintosh defined the category of curve-capable draw programs. However, *Illustrator* under *Windows* lacks the blending and masking tools and color display of the latest Mac version, and it looks pretty bare bones compared with *Designer* and *Corel Draw* and their abundance of tools.

Illustrator also requires some study, but once you master it, you may fall in love with the program's ingenious and well-orchestrated keyboard/mouse command combinations. Direct Bezier curve creation, a single dialog box for specifying line and fill attributes, and other subtle niceties make *Illustrator* a good choice for people who produce graphics day in and day out.

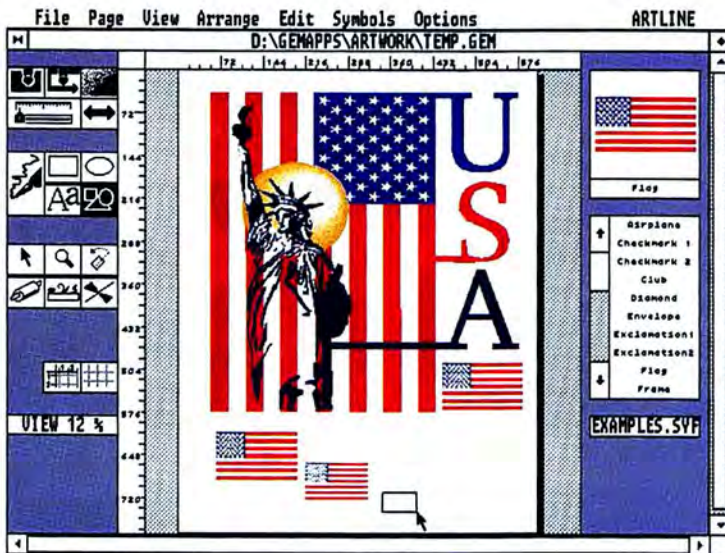

But boosting this *slow* program to acceptable performance means investing in a 386 or fast 286 machine with plenty of expanded memory. A PostScript printer is mandatory; printing on a LaserJet delivers a near-useless screen-resolution rendition of the image. If you're undaunted by the hardware requirements, *Illustrator* leads you painlessly through installation and provides a handy guide for setting up *Windows* with expanded memory.

Aside from its sluggishness, *Illustrator* has some other nagging flaws: It can't kern text, and because *Adobe's* typeface outlines are inextricably encrypted, you can't re-shape letterforms. And *Illustrator* is the only program reviewed that can't automatically align objects. The included clip art library is small but contains useful building-block objects like arrows, borders, and boxes. Still, *Illustrator's* pluses don't justify the steep hardware costs. *Corel Draw* is a better deal—especially if you need to manipulate lots of type.

GEM Artline 1.0

Like *Ventura Publisher*, the *GEM*-based *Artline* is proof that fast, quality graphics are possible on an XT-class machine. If you use *Ventura Publisher* with a LaserJet or another non-PostScript printer, *Artline* is the best companion draw program. Although it lacks some essential curve tools, *Artline* still merits consideration.

Adobe Illustrator is at its best with bit-mapped templates—for auto- or manual tracing. The separate pre-view mode, shown in the right window, does not update automatically.

GEM Artline lets you cull symbols easily from libraries and change the shape of Bitstream typeface letterforms.

Artline lets you create Bezier curves directly and do most anything your heart desires with any typeface from Bitstream's Fontware library. The skewing tool is especially powerful and intuitive, and it's useful for distorting type.

But Artline can't automatically trace bit maps—a big omission if you start your drawings from scanned images or clip art. You can trace bit maps manually, but you'll need a minimum of 512K of expanded memory. Bezier handling is deficient as well. You can't create a closed shape out of curve points, for instance; the start and end points lie on top

EXECUTIVE SUMMARY

GEM Artline 1.0

Draw program

Artline offers speed, elegant curve creation, and type and symbol handling. Despite its weak curve manipulation and lack of auto-trace, it's fast enough to run on an XT and is a good choice for Ventura/LaserJet users.

of each other, but they can't be combined for a smooth join. Nor can you add or delete points within a curve. These frustrating omissions make it hard to get shapes just right. To top it off, there's no undo command—just undelete.

Despite these failings, Artline is easy to use and saves files in .GEM format—Ventura sometimes has trouble importing other file formats, especially if they contain fills. The powerful image management system, which lets you simply drag symbols from a library window into the main window, gets an A+ in ease of use. But the supplied clip art libraries, though high quality, are too skimpy to be very useful. Still, Artline is the best choice for illustrations destined for Ventura and a LaserJet.

EXECUTIVE SUMMARY

Arts & Letters Graphics Editor

Draw program

The clip art/symbol library makes this a good choice for the artistically uncertain. The lack of auto-trace, undo, and explicit curve creation features, however, offsets the program's good curve-manipulation tools.

Arts & Letters Graphics Editor

Arts & Letters' greatest strength is its large and useful library of building-block symbols. By combining symbols and rotating, resizing, and editing them, even those who are not artistically inclined can assemble complex drawings. The program's Distribute tool—similar to Mac Illustrator's blend feature—is a nice touch. Otherwise, there's not much reason to buy Arts & Letters when you can get Corel Draw for \$200 less.

Why Buy A Library When A Single Volume Has It All?

You could spend close to a thousand dollars buying all the software pictured above.

Or, for a fraction of the price, you could get all of their best features in one easy-to-use utilities package: PC Tools® Deluxe.

PC Tools Deluxe is the most complete and capable utilities product available at any price.

It includes data recovery utilities for recovering accidentally deleted files or repairing corrupted disks. Its resident DOS shell allows you to view multiple directories simultaneously and copy or move files with just a click of a mouse. The hard disk backup program is fast,

has an adaptable data compression feature for cutting backup time by as much as 50 percent, and even tells you how long the backup will take and the number of disks you'll need before you start. There are file unfragmentation and disk-caching utilities for enhancing your system's performance. And PC Tools' desktop manager features a unique windowed environment, full mouse support, pull-down menus and context-sensitive help that make learning and using the product a breeze.

So before you invest in an entire library, check out PC Tools Deluxe. With more than a half million copies in use, it's on everybody's best sellers list.

Arts & Letters' Distribute feature lets you interpolate a number of objects between an original version of an object and an edited copy.

Like other draw programs, *Arts & Letters* lets you create objects from scratch. Unfortunately, you can't create boxes or ovals using a tool. Instead, you must load them from a symbol library by number, so you constantly need to refer to the printed (but well indexed) catalog. Like *Artline*, *Arts & Letters* lets you undo deletions only.

Arts & Letters has no direct curve-creation or auto-tracing tools, so you need the manual dexterity required for drawing curves freehand. The program's curve con-

trols are complete, but they're harder to use than *Corel Draw*'s.

Arts & Letters comes with 6 serif and sans serif typeface outlines, with 28 other typefaces available for \$25 apiece. You can convert the letterforms to objects for reshaping, filling, and so on. But *Corel Draw* and *Artline* offer more typefaces and better typographic controls, so look to them for real pyrotechnics.

Drawing on Resources

So which program is right for you? Artists who need flashy effects and extensive curve and typographic controls should buy *Corel Draw*. If you use lots of geometric shapes and tap libraries of symbols for charts and technical illustrations, *Designer* is it. Anchored to *Ventura* and a *LaserJet*? *Artline* is a friendly, type-savvy companion. *Illustrator*'s complex, powerful features may attract full-time artists, but the program requires lots of hardware. Need to split hairs further? Check the accompanying Features Evaluation, then draw your own conclusions. ●

Circle 310 on reader service card

A bevy of third-party programs offers special features to enhance or supplement your word processor. Ranging from outliners to group writing tools, they help you add style and authority to your writing.

38 Tools for Great Writing

MATT LAKE AND

WILLIAM RODARMOR

These days word processors seem to do everything but walk the dog—yet they still can't meet everyone's needs. If your spelling checker stumbles over words basic to your business, or a built-in outliner feels confining, a number of specialized third-party programs may do the job better.

This Buyers' Guide covers outliners; reference works; spelling, grammar, and style checkers; group writing tools; file converters; and document assemblers. None will turn you into a William Faulkner, but all can make your word processing faster, easier, and more accurate.

Outliners basically help you compose a document in outline form. But they can also serve as brainstorming tools to organize an argument into major and minor points. Typically, these programs let you expand and collapse subheads, make dynamic copies of heads (if you change one, the other changes as well), zoom a portion of the outline to fill the screen (called *hoisting*), and export the finished outline directly to a word processor. The best allow 32K and more of text in individual heads and let you rearrange entries by clicking and dragging with a mouse.

Under *reference works* you'll find custom dictionaries and thesauruses designed for lawyers, doctors, translators, engineers, and other specialists. The top products contain cross-references, define words and phrases, and let you explore synonyms of synonyms until you find the mot juste.

Anyone can benefit from a *spelling, grammar, or style checker*. Add-on spelling checkers often have a vocabulary far larger than a word processor's; some allow multiple personal dictionaries or check foreign language spellings. Other programs offer tips on punctuation, grammar, and writing style.

Especially popular among lawyers, *group writing tools* let multiple authors amend and annotate text without obliterating the original. Some use different colors or typefaces to highlight changes, display original and edited versions in a split screen, or accommodate proofreading marks.

File conversion utilities are a boon if you often have to convert documents from one word processing format to another. The best can convert files in batches.

Finally, businesses such as banks and insurance companies that generate documents with a common form but varying content may find a *document assembler* useful. Such a program lets you

create a questionnaire, then automatically turns out a merged document with the answers nested amid the boilerplate. ●

OUTLINERS

Freestyle 1.5b has all the basic outliner features plus word processing, mail merge, and a glossary. Mnemonic keys call up different functions, including an on-screen tutorial. List price: \$295.

Reader service no. 601

GrandView 1.01 is Symantec's high-end outliner and includes a category function that lets you

cross-reference information. Besides doing the basics, *GrandView* supports a mouse, lets you use macros, opens up to nine outlines at once, and can hoist any continuous block of heads. *GrandView* accepts up to 64K for each outline entry. It also sports a word processor and a 100,000-word spelling checker. List price: \$295.

Reader service no. 602

Ready is Symantec's simple, memory-resident outliner. It provides basic head and subhead shuf-

fling and alphabetic ordering only. *Ready* features hot-key and mouse support and exports the outline in ASCII format. List price: \$99.

Reader service no. 603

ThinkTank falls in the middle ground of Symantec's outlining programs. It lacks a spelling checker, can hoist only one headline at a time, and accepts only 76 characters per head. The package comes with 30 outline templates for business applications. List price: \$195.

Max 89 is a stand-alone outliner that offers sorting and hoisting and allows heads to be as long as RAM permits. But it also has a pair of unusual idea-sorting features: One lumps notes under whatever title you choose, the other sorts them in random order until a document starts to take shape. The program also automatically links multiple outlines and ASCII files and includes a utility that converts an outline into hypertext form. List price: \$89.

Reader service no. 606

PC-Outline is Brown Bag Software's RAM-resident outliner. It offers

a category view option to help organize information. The program can open nine windows; collapsing extraneous subheads and text limits the visual confusion. You can bypass the menu system with a comprehensive set of mnemonic commands. An upgrade will add a spelling checker and synonym finder. List price: \$195, free upgrade.

Reader service no. 607

Webster's New World Outliner Plus is a simple TSR you can run alone or in memory along with a word processor, data base, or spreadsheet. It accepts 32K of text per entry but it performs alphabetical ordering only and lacks a spelling checker and zoom capability. It includes pop-up calendars, a phone log, and command summaries for DOS, *dBASE III*, 1-2-3, and other programs. List price: \$69.95.

Reader service no. 608

REFERENCE WORKS

Black's Law Dictionary, Reference Set 3.0, and **Stedman's Medical Dictionary** are memory-resident data bases that come with a core 83,000-word Random House Concise Dictionary. Professional needs are addressed by Stedman's 68,000-word medical dictionary and Black's 16,000-word legal lexicon. *Reference Set* is a 400,000-word thesaurus. Each data base can be customized with a personal glossary and can check spellings against its word list. List price: \$89 each.

Reader service no. 609

Choice Words from Proximity Technology combines Webster's Concise Electronic Dictionary and Webster's Thesaurus. The 100K TSR offers pop-up definitions for 80,000 words and synonyms for

40,000, and supports most word processors and 1-2-3. Cross-references, phrase definitions, and suggestions for incomplete words are among its key features. List price: \$99.

Reader service no. 610

Concise Dictionary of 26 Languages is a RAM-resident program that defines words in 26 tongues simultaneously. The translations of 1000 common words in each language come from the full text of Lyle Stuart's 26,000-word dictionary. The vocabulary occupies 1.5MB of hard disk space. List price: \$49.95.

Reader service no. 611

Funk & Wagnall's Standard Desk Dictionary contains the full 100,000-definition text of the book and a RAM-resident driver to access it. Inductel's word data base takes up slightly more than 5MB of hard disk space and provides full-screen definitions at

the stroke of a hot key. A wild-card option helps with doubtful spellings. List price: \$79.95.

Reader service no. 612

McGraw-Hill Technical Dictionaries comprises six separate RAM-resident Inductel packages: *Mechanical and Design Engineering, Computers, Electrical/Electronic Engineering, Chemical Terms, Biology, and Physics*. Each takes up less than 3MB of hard disk space. List price: \$49.95 each.

Reader service no. 613

KeyNotes AP Stylebook 1.0 provides information on punctuation, grammar, and style according to the rules of the Associated Press. The memory-resident program gives users instant access to the complete text of the AP bible and even includes a list of computer terms. List price: \$59.95.

Reader service no. 614

Webster's New World Professional Thesaurus offers the full 4,000,000 synonyms of Simon & Schuster's hard copy version, including phrases, full cross-referencing, and multiple entries for words with more than one meaning. The program supports over 40 word processors, spreadsheets, and data base programs. List price: \$129.95.

Reader service no. 615

Webster's New World On-Line Thesaurus II pops up the whole relevant page from the hard-cover thesaurus when you

highlight a word. This inexpensive thesaurus can replace words in your document, using a data base of over 1 million synonyms, and it also supports spreadsheet and data base programs. List price: \$59.95.

Reader service no. 616

Word Finder 4.0 is Microlytics's 220,000-word thesaurus, but it comes with a smaller thesaurus of 120,000 synonyms for users with limited disk space. The program can replace a word in a document instantly, retaining exact punctuation and capitalization. *Word Finder* can also find synonyms for words you type in directly and confirms correct spelling. It's compatible with more than 33 word processors and is bundled with *Microsoft Word*, *WordStar*, and *XyWrite*. List price: \$59.95.

Reader service no. 617

SPELLING, GRAMMAR, AND STYLE CHECKERS

Grammatik III offers tips for stylistic and grammatical improvements to documents from most word processors. You can run the program interactively or have it create a marked-up file or printout. After running its checks, Reference Software's program can even grade your efforts. An optional *Utilities* package lets you run *Grammatik III* as a memory-resident utility and create custom phrase and word dictionaries. List price: *Grammatik III* \$99, *Utilities* \$59.

Reader service no. 618

Jet:Spell Multilingual

3.23 is a stand-alone foreign language spelling checker and interactive corrector, available in 11 languages including Norwegian, Dutch, German, Spanish, and both Canadian and Parisian French. It checks abbreviations, capitalization, and compound words and can even check multiple languages in the same text. List price: with one dictionary \$109.95, additional dictionaries \$59.95 each.

Reader service no. 619

PC-Stylist 1.1 checks style (but not grammar) on any *WordStar* or ASCII-format document by counting sentences, words, and syllables. It produces a readability rating using that popular guide to written obfuscation, the Fog Index. List price: \$29.95.

Reader service no. 620

Readability Plus

analyzes a document's mix of long and short words and simple and complex sentences, then compares those ratios to statistical models of any of nine writing styles, including technical and government reports, advertising copy, and newspaper articles. Other key features grade readability and vocabulary difficulty, compare writing to a corporate style, and let you create a personal hit list of expressions to avoid. The program works with all word processors and reads *WordPerfect*, *Microsoft Word*, and *WordStar* files directly. List price: \$94.95.

Reader service no. 621

RightWriter 3.0 checks documents in ASCII and most popular word processing formats for errors in grammar, usage, punctuation, and style. The program is designed to improve writing by pointing out clichés, wordy phrases, and passive voice. *RightWriter* produces a summary that rates the document's reading grade level, strength of delivery, and use of jargon. It also offers a list of misspelled and uncommon words. List price: \$95.

Reader service no. 622

Turbo Lightning 1.0 is the original beep-as-you-type error catcher. Borland's RAM-resident program contains a spelling checker that uses the 83,000-word Random House Concise Word List and the 50,000-word Random House Thesaurus. When you type a word *Lightning* doesn't understand, the program beeps; press a key, and it produces a list of "sound-alike" words; press another key, and it implements your chosen substitution. If the beeping drives you crazy, you can turn it off and check an entire screenful of words later on. List price: \$149.95.

Reader service no. 623

Webster's New World Combo combines the features of Simon & Schuster's *Professional Spelling Checker* and *The Saurus II* from the Webster's New World group to provide 1 million synonym replacements plus spelling correction. Its spelling capacity can be upgraded by the user and by the *Professional Speller Dictionaries*. List price: \$89.95.

Reader service no. 624

Webster's New World Professional Speller Dictionaries comprises three specialized word lists: *Legal*, *Medical*, and *Scientific*. These lists serve as add-on vocabularies for use with the *Combo* and *Professional Spelling Checker*. List price: \$69.95 each.

Reader service no. 625

Webster's New World Professional Spelling Checker checks the spelling of single words, blocks of text, whole documents, or words as you type them. It allows users to enlarge the 114,000-word vocabulary to include auxiliary dictionaries up to 64K in size, and it supports the New World collection of add-on professional word lists. List price: \$59.95.

Reader service no. 626

Whoops 3.2P compares spelling against a 50,000-word proprietary word list as you type and offers a thesaurus based on the same list. Given 190K of free RAM, you can keep the word list in memory to accelerate performance. You can also enlarge it with a personal glossary. List price: \$49.95.

Reader service no. 627

Windows Spell 3.0 corrects spelling in most Windows applications—including *Excel*, *WinText*, *Windows Write*, *Windows Draw*, *Microsoft Word*, and *Aldus PageMaker* files, even if they contain graphics. Drawing on a 130,000-word dictionary and your personal user dictionaries, *Windows Spell* checks single words, documents in background windows, even text blocks in the Clipboard. When checking in the background, the program flashes its dictionary icon as it locates errors. List price: \$95.

Reader service no. 628

GROUP WRITING TOOLS

CompareRite 3.0 compares two versions of a document and produces a third that shows added, moved, and deleted text in a variety of user-selected formats. You can also print the file with a word processor. New features in version 3.0 include options to skip passages of text and compare footnotes. List price: \$129.95 plus shipping.

Reader service no. 629

DocuLiner 2.14L uses changes in color or typeface to show draft changes on screen and can print marked-up files directly with a full summary. The split-screen comparison displays windows of both drafts with the differences highlighted. The Novell and 3Com network versions support five users each. List price: \$149, network version \$695.

Reader service no. 630

ForComment 1.16 lets up to 15 reviewers add comments to a file while allowing only the author or editor to alter it. Comments are initialed and date stamped, creating an "edit trail." Brøderbund's program can retain 26 versions of a document and 15 comments on a given line of text. List price: \$295, network version \$995.

Reader service no. 631

Red Pencil 1.21 enables users to proofread and mark text for eight common operations: move, delete, insert, change, paragraph, no paragraph, stet, and query. Keyboard commands are standard, but mouse support makes marking text easier. List price: \$199.

Reader service no. 632

FILE CONVERSION UTILITIES

Software Bridge 3.11 converts file formatting, including footnotes and font changes, between 19 word processors, including all versions of *WordStar*, *WordPerfect*, *MultiMate*, and *Microsoft Word*. List price: \$149, network version \$295, additional nodes \$69 each.

Reader service no. 633

Word For Word Professional 4.1 automates two-way file conversions between 20 file formats, including *WordPerfect*, *WordStar*, *Microsoft Word*, and *Lotus Manuscript*. Users can convert single documents or batch-convert up to 200 files in one session. List price: \$149, upgrade \$29.95; network version for three users \$299, five users \$399, ten users \$599.

Reader service no. 634

Word Transformer 4.01 converts files into ASCII format annotated with typesetting codes. It supports 18 high-end word processors including *Microsoft Word*, *XyWrite*, *WordPerfect*, and *WordStar*. List price: \$89.

Reader service no. 635

DOCUMENT ASSEMBLERS

Blankity Blank 2.6

combines with your word processor to collect information and produce multi-

ple documents—or pre-printed forms—without repetitive typing. Users fill in questionnaires of up to 1000 questions, and *Blankity Blank* creates a merged document from the responses. It features

recalculation based on numerical input, averaging, and rounding up or down. List price: \$99.50, four-user version \$249.50, two-user add-ons \$99.50 each.

Hard Disk Utilities Revisited

Hard Disks

Concerned about the health of your hard disk? Consider one of these helpful utilities.

Nancy Canning

The table that accompanied "How to Recover From Hard Disk Disaster" ("Tips & Techniques," PCW, May 1989) incorrectly listed some of the features offered by six leading hard disk maintenance packages. Rather than simply print a correction, we're taking this opportunity to explore the products in more detail, and we've added complete vendor contact information. PC World regrets the errors, and we hope you find the additional information useful.

When a cranky hard disk suddenly puts vital data out of reach, even the most technically indifferent PC user can learn to love a hard disk utility package. Complete novices will find *The Norton Utilities Advanced* and *Mace Gold* particularly good teachers and *PC-Tools Deluxe* very helpful. *Disk Technician*

Advanced, *HTest/HFormat*, and *SpinRite* offer bonus features for the more technically astute user.

Disk Technician Advanced 3.0

The more often you monitor your drive's performance with *Disk Technician Advanced*, the smarter this package gets—and the better off you'll be. *Disk Technician Advanced* builds a data base containing a record of each error, then warns of impending trouble with your disk drive or controller. A set of test and repair utilities can also ward off breakdowns.

HTest/HFormat 2.0

For people who need help fast, *HTest/HFormat's* detailed instructions help you recover data from most disasters. The package provides utilities to save your Master Boot Record (MBR), to replace deteriorated or missing sectors, and to compare different versions of files. It

also offers an interleave optimizer, surface and transfer tests, and nondestructive formatting.

Mace Gold

Mace Gold is a full-featured hard disk companion for preventive maintenance, fault analysis, and repair—plus data backup and recovery. The package includes utilities to back up your system information (MBR, FAT, and root directory), protect against viruses, and perform a non-destructive format. *Mace Gold* also offers diagnostic tools, a sector editor, and utilities to undelete and unfragment files, as well as unformat disks.

The Norton Utilities Advanced 4.5

Though best known for its ability to recover deleted files, Peter Norton's package also analyzes disks and recovers data lost because of drive or file deteriora-

tion. The Norton Disk Doctor automatically diagnoses and cures most problems that afflict hard and floppy disks. The package also delivers system and disk information, sorting routines, a batch file generator, and text- and file-search utilities. The accessible documentation is complemented by dialog boxes and help screens.

PC-Tools Deluxe 5

In addition to a full assortment of menu-driven, extended DOS utilities, *PC-Tools* lets users perform nondestructive formats, unfragment files, optimize a hard disk, and use the disk map and sector editor to recover from accidental deletions or formatting. The package can also save a copy of your system information and restore it easily when needed.

SpinRite 1.2

SpinRite's prime function is to test your hard disk periodically and warn of problems that can arise as your formatting information deteriorates. The package can analyze drive/controller performance and optimize the interleave, as well as repair many kinds of low-level format damage. Although designed for all users, *SpinRite* is particularly useful for technicians who need to perform in-depth tests when troubleshooting or configuring disks and their controllers. ●

Advice and information for the computer consumer

This month: Readers speak out about mail-order delays, strict return policies, and nagging repair problems—and report a few happy endings, too.

Anita Amirrezvani

SHOP TALK

The New PC Network's New Look

Until recently, The New PC Network, a mail-order company in the Chicago area, ran ads listing products at surprisingly low prices. Each price was marked with an asterisk; the inquisitive shopper had to hunt down the corresponding asterisk at the bottom of the page to learn that the real cost was 8 percent more than the advertised "wholesale" price. After adding shipping charges and credit card surcharges—often called "dis-

counts for cash"—the total cost could be 11 percent more than what was listed in the ad.

Jeffrey Kleckner, president of The New PC Network, says the company has clarified its ads. "We've changed our program because many customers were confused," he says. "Our advertised prices are now our selling prices, except for freight charges." And Kleckner says there are no surcharges for credit cards, either.

Fast Micro Alert

In the last six months, *Consumer Watch* has received nine complaints about Fast Micro, a mail-order company in Phoenix. Most of the complaints concern delays in shipment, checks cashed and credit cards billed long before merchandise is shipped, poor response to problems, and an unanswered or continuously busy customer service number. Two readers reported that they called 20 times or more before getting through.

Fast Micro has generally been responsive to *Consumer Watch* requests for refunds or other action. In two cases, however, the company declined to provide refunds. Mail-order shoppers should be aware of the following Fast Micro policy, as stated in a recent letter to *Consumer Watch*: "We do not take opened items back under any conditions. It is totally up to the buyer to determine that the product they are about to order meets his/her requirements. We accept a return only on unopened products

with a 15 percent restocking fee."

Although Fast Micro's current ad reads, "No returns on *used* items," we think this phrasing could easily be interpreted to mean something different than *unopened* items.

Exceptional Care?

In June 1988 I purchased a Toshiba T1200 for two reasons: My previous unit, a Toshiba T1100 Plus, was a highly reliable portable; and the Exceptional Care service agreement promised a one-day turnaround on repairs. The agreement further promised that if the computer could not be repaired in the stated time period, a replacement would be provided.

To my chagrin, the T1200 has never been completely functional, and Toshiba has not lived up to the terms of the Exceptional Care agreement. In November 1988, I sent my computer to Toshiba for repairs for the third time. I feel I'm being held hostage by Toshiba's service organization and its excuses.

James H. Beeson
Tulsa, Oklahoma

Toshiba America responds: As soon as this matter was brought to our attention, we responded by calling Dr. Beeson to assure him that his T1200 would be repaired. The computer was fixed and returned to him, and he as-

RATE YOUR SATISFACTION: Communications

The race between Smartcom and Crosstalk is about even. According to this survey of large organizations with 50 or more PCs, users are equally satisfied with both. And the majority plan to continue to buy both products.

For consumers, Smartcom's advantage is that it's bundled free with some Hayes modems and generously discounted with others. DCA/Crosstalk Communications, on the other hand, offers a more varied line of products, with Crosstalk Mk.4 at the high end and Crosstalk XVI for less demanding users. But dollar for dollar, both companies face stiff competition from inexpensive, competent products like ProComm Plus.

How Farsighted Executives Are Using Their PC's For The Fun Of Profit.

By William J. Spink

For years now you've been hearing about the wonderful things personal computers will do for The Executive of the 80's—at least in theory.

But what's the *reality*? Can a PC help you enjoy your work more and show a greater profit, here and now? According to your peers, the answer is "yes."

"With just a few keystrokes," says Al Lynch, Director of Corporate Planning and Research for JCPenney Company, "I can screen companies, find possible acquisitions or 'scope-out' competitors. It's a real competitive edge."

Walt Casey, V.P. of Communications at ConAgra says, "I spend a lot of time each day poking into this and tracking that. It's *much* easier when you can immediately get the facts from a computer, rather than having to make a series of phone calls."

"One of Dow Jones News/Retrieval's services, QuickSearch, is a Godsend," adds Jim Posner, a respected retail consultant. "It gives me detailed corporate reports within minutes—I don't even have to leave the office."

Instant information: the executive advantage.

To lead in today's marketplace, you need information like *that*," Lynch says, snapping his fingers.

He recalls an example of how Dow

Jones News/Retrieval®—the business and financial information service from Dow Jones & Company, Inc.—gave JCPenney Company a real advantage.

"Let's just say that a 'major player' in our industry was being acquired. Within a few hours we knew more about the takeover candidate than the bidder did. Honestly, we knew more than some investment bankers did."

Decision-making with the leading edge.

"Then we started getting the corporate insider trading data," Lynch continues. "It showed us some things that influenced a major deal."

"No problem," according to Posner.

"There's no difficulty using the service. I ask for pointed, specific information and get exactly what I need. It's much easier than manual research."

Walt Casey agrees. "Dow Jones News/Retrieval is simple enough for anyone who's at all comfortable with computers to use it effectively from their very first day online."

Making the right decision.

There are hundreds of online information services, many offering business data. How can you pick the best one?

"It was apparent from the first step that the most useful system was Dow Jones News/Retrieval," remembers Casey. "It offers so much of the information you're looking for—from general news and stock quotes, to data on our company and industry. It was the best single source."

"I've had other services, but Dow Jones News/Retrieval has the most useful business information in the right form," says Posner. "The time I spend 'playing' on the computer makes more money for me—and for my clients."

LaserJet on the Loose

We ordered an HP LaserJet from Kenco General Electronics in Maspeth, New York, in October 1988. Our check cleared the company's bank on October 24, but we have not received the printer. Each time we call, Kenco gives us the runaround. We have written twice demanding our money back, but Kenco has not responded.

*Patrick R. Lyle
Wheeling, West Virginia*

Kenco General Electronics responds: Because the check was not properly posted to our account, we showed no record of the payment. We therefore had to go through thousands of records manually to find the check. After we found it, we realized it

was not properly posted because a purchase order had not been sent with it. In February, we shipped the order.

A Job Well Done:

Practical Peripherals

Recently I installed a serial mouse in my PC. Because my internal modem and serial printer were already occupying COM1 and COM2, I planned to switch the internal modem to COM3 and connect the mouse to another serial port. Unfortunately, my two-year-old Practical Peripherals 1200 modem could only be set for COM1 or COM2.

Rather than purchase another modem, I contacted Practical Peripherals in Westlake Village, California, and was amazed at

what followed. For a mere \$7.50 shipping fee, I returned the modem; in exchange, the company sent me a brand-new 1200-bps internal modem that could be set for COM3. Because the software included with the original modem did not recognize COM3, a copy of the current bundled package, *ProComm*, was also included, complete with documentation.

The company should be congratulated for maintaining customer satisfaction at what is really its own expense.

Q.

"Where Do I Turn For More Information?"

A.

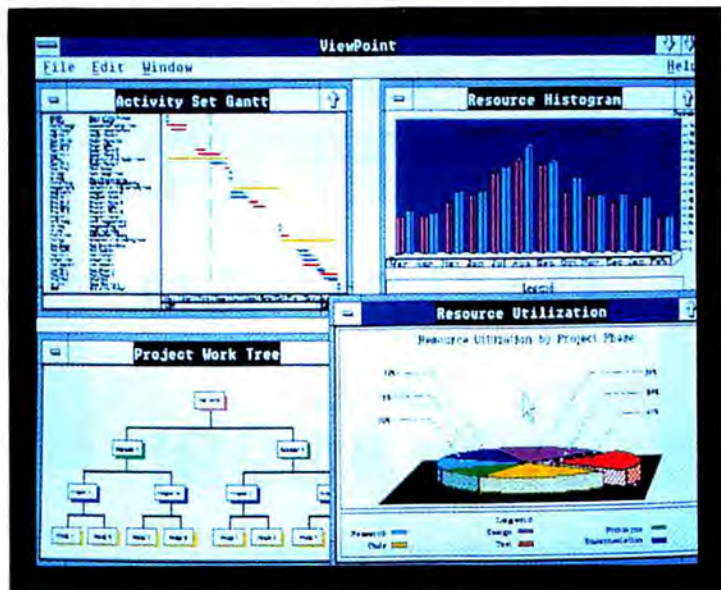

1. Turn to the Reader Service Card at the back of this issue of *PC World*.
2. Find the Reader Service number of the product you want in the product or advertiser indexes.
3. Circle the number, fill out the postage-paid card and send it in. It's that simple.

In return, our advertisers will send you more information on the products you want. It's just another way that *PC World* helps you make the best buying decisions for your company.

The Project Manager That Gets You There!

ViewPoint is the acclaimed project management program designed to manage multiple projects, across divisional boundaries, using the same resources.

Profit from a Different Point of View

Create the necessary visibility to get management consensus *before* adding detail to the plan. ViewPoint's mouse-driven, point-and-click operation makes on-screen modeling easier. Speed up project development or defining reports with templates from ViewPoint's library.

Adopt ViewPoint and Trace Overloads

Interactively fine-tune projects without delaying finish dates or deliverables. Resource Load Trace uniquely finds solutions when conflicts arise and traditional methods like Leveling and Constraining won't work to resolve them.

ViewPoint Activities are Well Connected

Import and Export ASCII, dBASE or Lotus files and save milestone events for auto-linking. Display project status

with presentation-quality charts on printers and plotters. Preview everything on-screen; or save reports to disk and use the mouse to scroll around them.

Plan for Today as well as Tomorrow

Maintain planning flexibility with non-linear resource distribution, earned-value and what-if analysis, multiple rate costing and resource roll-up. ViewPoint is the visual resource management tool to solve today's planning problems as well as tomorrow's.

Aw...What the Heck!

EXTREMELY POWERFUL

DesignCAD 3-D version 2.0 is as powerful as most CAD systems costing \$5000-\$10,000! Features like: Complex Extrusions-linear, scalar, and circular, Blending of Surfaces, Shading, Cross Sectioning, Complex Sweeps and Translations, and Boolean operations make DesignCAD 3-D one of the most powerful 3-D CAD systems available... at any price! Engineers, Architects and Consultants constantly tell us that they use CAD systems costing thousands of dollars which are not as powerful as DesignCAD 3-D.

VERY EASY TO USE

Just because DesignCAD 3-D is powerful doesn't mean it is difficult to use. Single keystroke commands and side-bar menus which give short directions on how to proceed make DesignCAD 3-D a snap to use! While not required, DesignCAD 3-D supports all popular digitizers and mice.

Many of the older, more cumbersome CAD systems require weeks of training before a user can be productive. DesignCAD 3-D users find they can be producing useful drawings in a matter of minutes! In a recent CAD contest only one contestant was able to match our drawing time. The package sold for \$3000.00. The other CAD packages took up to twice as long to perform the same drawing and cost up to \$5000.00!

Still don't believe us? The goblet pictured below required only 16 keystrokes and 3 commands to create! The top, front, side, and isometric views were created simultaneously... in less than one minute!

DesignCAD 3-D only \$399!

VERY LOW PRICED

The first question asked by many people is, "Why is DesignCAD 3-D priced so low?" The answer? After developing DesignCAD 3-D version 2.0, we were unable to decide how the product should be priced. We consulted experts. We used the finest spreadsheets on the market. We took employee polls. Finally, in the great American Tradition, we said, "Aw... What the Heck! Let's see the other guys beat this price!" DesignCAD 3-D version 2.0 sells for \$399.

WHY BUY THIS ONE?

There is a very important reason to buy DesignCAD 3-D. PERFORMANCE. No other CAD system can match our price/performance ratio. Many people make the serious mistake of thinking that it is necessary to spend thousands of dollars to obtain "a good 3-D CAD system." This is not true! We talk to people everyday that are sadly disappointed with their "expensive" CAD systems. Don't be one of them! Call us and we will send you a complete set of literature and a free slide show demo disk. Once you compare DesignCAD 3-D version 2.0 with other CAD systems we know you will choose DesignCAD 3-D.

DON'T TAKE OUR WORD FOR IT

Here is what other people have to say about DesignCAD 3-D:

"After you've worked with DesignCAD, the single keystroke commands are simple to remember and it becomes easy to 'flick one key' to execute a command. An extremely ergonomically designed program."

HENRY LEVET, Levett & Daigle Architects - New Orleans, LA
Designed a 65,000 sq. ft. nursing home using DesignCAD

"Recently I worked with a firm that builds decks. They purchased your product on my recommendation. I sat down with them and in two hours they were very proficient in DesignCAD. Now they are more effective; and we can communicate... it's wonderful to be able to do a block repeat 42 times and there are 42 2x4's to make the deck!"

J. TURNER, Architect, TAO Ltd. - The Woodlands, Texas

"Allows scientists and engineers to expend minimum time learning and using CAD software so that their time can be expended on the project at hand. It also allows scientists and engineers to quickly present to management all views of a subject (3-D)."

DR. STEVENS, NASA Space Scientist/Engineer

HOW DO I GET ONE?

DesignCAD 3-D version 2.0 is available from most retail computer stores, or you may order directly from us. DesignCAD 3-D is available in a number of foreign languages from distributors throughout the world. All you need to run DesignCAD 3-D is an IBM PC Compatible and 640K RAM. DesignCAD 3-D supports most graphics cards, printers, plotters and digitizers. Free information and a demo diskette are available by contacting us at:

THE UPGRADE PATH

Hands-on advice for upgrading PCs, compatibles, and peripherals

The Compaq Portable lives!—
thanks to a new 80386
motherboard.

Robert Luhn

New Life for the Compaq Portable

In these high-tech, 33-MHz times, the old Compaq Portable may seem destined for the Boston Computer Museum. But to the former Intel engineers who run Hauppauge Computer Works, it's the raw material that you can mold into a powerful 80386 machine with their \$1495 386 Motherboard/CQ16.

Keep in mind that turning a Compaq Portable (or Portable Plus) into a screamer with this replacement motherboard isn't the easiest or cheapest route to

386 power. For example, you could pop an Intel Inboard 386/PC turbo board with 1MB of RAM into a free slot and be out only \$895. But the Motherboard/CQ16 turns your Compaq into a complete 16-MHz 80386 system, featuring an Award BIOS, an 80387 socket, 1MB of 32-bit motherboard RAM (expandable to 14MB), five slots (two 8-bit and two 8/16-bit, plus one 8/32-bit memory slot), and full compatibility with 386-based software. No 386 turbo board offers all these features.

Adding the 386 Motherboard/CQ16 to the Compaq is no two-step upgrade. A Compaq Portable is like an "efficiency" kitchen—components are crammed cheek by jowl into an impossibly small space. To replace its an-

tique motherboard, you must maneuver your hands into miniature nooks and remove access plates, cables, and boards.

If you've installed boards and know your way around the inside of a Compaq, you can tackle this upgrade. Just be prepared to wing it on occasion, because Hauppauge's user manual is missing steps and lacks Compaq-specific illustrations—holes the company pledges to patch soon. Tools of this upgrade: small flat-blade and Phillips screwdrivers, and needle-nose pliers; a set of nut drivers is highly recommended.

Park any installed hard disk, turn off the system, remove all external cables, lock the key-

board in place over the monitor, and set the system on a flat surface with the front facing you. Then follow the steps you'd normally take to install any board. Lean over and pry off the top panel with your fingernails or a flat-blade screwdriver—*don't* pop it off by giving it a karate chop like macho PC techs of old used to do. Loosen the screws on the perforated metal cover that shields the motherboard, and slip it off. The cover may be secured to the Compaq's disk controller with plastic clips, so gently rock the plate to get it off. Remove all expansion boards, and carefully unplug the cables attached to the video and disk controllers.

Before you can evict the Compaq's motherboard, you must first detach power, keyboard, and speaker cables. Flip the Compaq over with the front still facing you, pry off the panel, and remove the 2-by-7-inch access plate from the top right corner of the system near the handle. Pull off the silver-tipped, white, and black connectors that plug into the base of the motherboard. If one won't budge, insert a small flat-blade screwdriver between the connector and the motherboard, and gently twist until the connector pops off.

To remove the motherboard, turn the Compaq on its face (with the handle pointing up, as if you were going to carry it away), and locate the 15-by-1-inch metal plate near the handle. Remove the screws, gently pull up, and the old motherboard slides right out.

To install the Hauppauge motherboard, reverse the process. A few notable exceptions: Before you pack the old mother-

board away, transfer its mounting bracket to the CQ16. Then turn the old motherboard on its side, remove the plastic feet attached to the underside, and plug them into the CQ16. If they resist removal, take a pair of needle-nose pliers, pinch their tops, and twist and push them out.

Finally, locate the blue toggle switch at the edge of the CQ16—ignore the manual's confusing edict to "set jumper switch SW1"—and flip the switch away from the white power connector. This position selects the Compaq's standard monochrome graphics video mode. Slide the CQ16 board into the Compaq, reconnect the cables, connect a supplied system battery to the pins next to the speaker connector, and snap the bottom lid back onto the system. The manual then directs you to turn the system on (several beeps indicate all is well), turn it off, reinstall the video adapter, run a simple menu-driven setup program, then finish reassembling the system. If you turn the machine on and it stops in midboot, make sure the video mode that you set with the toggle matches the one you specified with the setup program.

Now you're ready for high-speed computing. A Hauppauge-equipped Compaq Portable won't beat a 25-MHz Compaq Deskpro/386, but thanks to Hauppauge's four-way interleaving RAM scheme, it can easily outpace a 16-MHz Deskpro/386 or Deskpro 386S. For an extra speed kick, install Hauppauge's disk cache utility.

Just remember that your revamped Compaq won't live up to its 386 potential without some further—and possibly expensive—

Have you seen the latest versions of these PC databases yet?

Open them up and you may wonder if they weren't put together on the principle of "no pain, no gain."

Not to mention what it's going to cost in time and money for learning, conversion, training and support.

Open R:BASE® and you can start taking care of business immediately, without learning a single command.

You'll be using the business database management system that's so powerful that it topped all the major industry ratings in 1988 (even beating dBASE IV) and walked away with top honors from Datapro for four years running.

And you'll quickly find that managing your business data is easier than ever before. You can do it yourself with menus, or have R:BASE write complete programs for you. Then customize your applications with an English-based language made for managing data, not for twiddling bits. And use our true compiler to create even faster solutions.

NOTE TO SPEED DEMONS AND VARS: *The R:BASE Compiler™ is shipping now.*

You can share data with software like dBASE, Lotus and Excel. And just "plug-and-play" on any of the popular networks (3 users free, 6-Pack and Unlimited add-ons available).

R:BASE is providing over 600,000 end-users worldwide with the information they need in large businesses and small. On stand-alone PCs and in networks sharing data with minis and mainframes. In insurance and real estate companies, factories and universities, government offices and the storefront down the street.

sive—upgrades. Hauppauge strongly recommends you upgrade the Compaq Portable's original power supply immediately with the \$169 CP160 from PC Power and Cooling of Bon-sall, California. For performance' sake, you'll eventually want to replace any aged hard disk and controller and maybe add more high-speed memory. (Naturally, only Hauppauge memory boards work with the CQ16. But you can shave costs by buying an unpopulated board from Hauppauge and adding RAM chips to it.)

You may also need a high-capacity floppy drive, since *Windows/386* and other 386-specific programs are distributed on 1.2MB or 720K floppy disks. Although floppy drives for the Compaq are cheap, installing them is a nightmare. Take that upgrade to the experts at your friendly neighborhood computer store and let them sweat it out.

How to PC-FAX and Back with Xpedite

With PC-Xpedite™ software and service, you can send and receive faxes with your personal computer. You can reach more than 4-million businesses with FAX machines worldwide without incurring the cost of a FAX machine. Without printing and manually transmitting. Without purchasing FAX boards that tie-up large amounts of memory and don't offer you faxing options.

Affordable...

With only a \$49.00 investment in your PC-Xpedite™ software, you can send and receive FAX transmissions today using Xpedite service. There is no need for a dedicated phone line, usually required with fax machines and fax boards. As with regular phone-line charges for fax usage, you are billed on a monthly basis for Xpedite's service. And, rates are comparable or often less than regular phone-line usage.

Better Quality and Convenience...

Is what you receive from Xpedite's service. When your document enters our service center, we perform any necessary document translation automatically and deliver the message to the FAX address you specified. You'll discover the quality advantage of PC-to-FAX transmissions when you see the superior resolution in your faxes.

More FAX Flexibility...

Only Xpedite service gives you PC-FAX ability with the following options:

- Merge documents onto your letterhead
- Express service for delivery in minutes
- Deferred service for delivery at off-peak rates
- Billing codes to identify FAX expenses
- Broadcast FAXES to multiple locations.
- Security features— encrypted messages & error correcting protocols.

What you need...

All you need to fax today is:

- An IBM PC or compatible with 512K memory or greater
- 3 1/2 or 5 1/4 diskettes
- Dual drive or hard disk
- 1200 or 2400 baud Hayes compatible async modem
- Dot matrix or laser jet printer (to receive)
- PC-Xpedite software

How to get started...

Now that you know how to FAX and receive from your PC, return your order form today and receive \$10.00 worth of free fax transmissions. Or CALL 800-227-9379 or in NJ call 201-389-3373 for more information.

A global exchange of personal computer discoveries

Load huge Turbo Pascal arrays, set the system date automatically on clockless computers, form feed directory printouts, find files containing specified text patterns, and pick up a C development system for next to nothing.

Edited by Tom Swan

If the Array Fits, Load It

Whenever I try to create an array large enough to hold more than 64K of data using *Turbo Pascal 4.0*, the compiler balks and issues a 'Structure too large' error message. I solved the problem by creating an array of pointers that reference records, each containing two individual string arrays. *BIGARRAY.PAS* demonstrates the technique [see **LISTING 1**]. You can construct similar arrays in your own pro-

grams—just be sure to use an index range of 0 to `ArraySize-1` so that the MOD operator can calculate the correct index values.

*Stephen Piatak
Moline, Illinois*

Editor's note: To test BIGARRAY.PAS, compile the program to disk with Turbo Pascal 4.0 or 5.0 and create a sample input

*text file named SAMPLE.DAT that contains the text in **FIGURE 1**. With both files in the current directory, type BIGARRAY <SAMPLE.DAT. BIGARRAY reads in the text file, stores the strings in individual record arrays, stores their pointers in array 'a', then retrieves the data and prints it on the screen.*

```
(* Turbo Pascal Large Arrays--by Stephen Piatak *)
program BigArray;
const RecordSize = 51200;
      ArraySize = 100;
      ArraySizeMinus1 = 99;
type Str255 = string[ 255 ];
      StrArray =
        array[ 0 .. ArraySizeMinus1 ] of Str255;
      Aptr = ^Arr;
      Arr = record
        name : StrArray;
        address : StrArray;
      end;
var a : array[ 0 .. 10 ] of Aptr;
    i, j, counter : word;
begin
  (*----- Read input into big array -----*)
  i := 0;
  counter := 0;
  while ( maxavail > RecordSize ) and
    ( not eof( input ) ) do begin
    new( a[ i ] );
    j := 0;
    while ( j < ArraySize ) and
      ( not eof( input ) ) do begin
      readln( a[ i ]^name[ j ] );
      readln( a[ i ]^address[ j ] );
      inc( j );
    end; (* while *)
    counter := counter + j;
    inc( i );
  end; (* while *)
  (*----- Write big array to output file ----- *)
  writeln;
  for i := 0 to counter - 1 do
    with a[ i div ArraySize ]^ do
      writeln(
        i:5, ' ', name[ i mod ArraySize ]:30,
        address[ i mod ArraySize ]:40 );
  end.

FIGURE 1: SAMPLE.DAT sample data file for **BIGARRAY.PAS**

Locating a given array element for printing involves two steps. First, to choose the correct array, the program divides the overall index value by the array size using the DIV operator, as in the 'with...do' statement near the end of the program. Then, to find the desired record in that array, the program applies the MOD operator to the overall index. For example, if the overall index value is 345 and the array size is 100, BIGARRAY.PAS selects an individual array by using 345 DIV 100. The result of this calculation is 3. BIGARRAY.PAS then uses the expression 345 MOD 100, getting a result of 45, to calculate the index number for the individual arrays inside the records.

Hickory Dickory DOS

Lacking a clock/calendar card in my XT clone, I added the following commands to my AUTOEXEC.BAT file:
GWBASIC DATE1
DATE
GWBASIC DATE2
Since I often turn my system on

and off several times daily, this saves me from retyping the system date over and over.

DATE1.BAS [see **LISTING 2**] automatically resets the computer's system date to the date I entered when the computer was most recently booted. That date is stored in a text file named DATE.DAT. If that date is still valid, I just hit <Enter> when DATE prompts for a new date. Otherwise, I backspace over the incorrect date, type a new one, and press <Enter>. DATE2.BAS [see **LISTING 3**] then stores the new date in DATE.DAT.

Darell Piper
Collinsville, Illinois

Editor's note: Depending on the source of your BASIC interpreter, you may need to substitute BASIC for GWBASIC in the batch file commands. If you have a BASIC compiler, you can compile DATE1.BAS and DATE2.BAS, which will result in much faster execution. Just substitute the commands
d:\path\DATE1
DATE
d:\path\DATE2
for Mr. Piper's AUTOEXEC.BAT

```
5 REM DATE1.BAS.
10 ON ERROR GOTO 50
20 OPEN "i",1,"date.dat"
30 INPUT #1,A$
40 DATE$ = A$
50 SYSTEM
```

LISTING 2: DATE1.BAS reads the current date from DATE.DAT.

```
5 REM DATE2.BAS.
10 ON ERROR GOTO 50
20 OPEN "o",1,"date.dat"
30 PRINT #1,DATE$
40 CLOSE
50 SYSTEM
```

LISTING 3: DATE2.BAS stores the current date in DATE.DAT.

commands. d:\path represents the directory where DATE1.EXE and DATE2.EXE are stored.

Advanced Directory Printing

Have you ever wanted to print out a directory and automatically advance the paper to the top of the next page? To do so, I wrote DFF.BAT ("Directory With Formfeed"). To create the program, type COPY CON DFFBAT, press <Enter>, then enter the following commands, pressing <Enter> after each line.

ECHO OFF

DIR %1 %2 %3 > PRN

ECHO ^L > PRN ^Z

To enter ^L and ^Z, hold down <Ctrl> and type L or Z.

When DFF.BAT runs, the first line temporarily suppresses screen display so the batch file runs invisibly. The second line sends a list of the current directory's files to the printer (unless you specify a different directory). The third line sends the ASCII formfeed code to the printer, advancing the page.

You use DFF.BAT just as you would DIR—DFF to display all files in the current directory, DFF *.EXE to limit display to files with an .EXE extension, and DFF /W for a wide display.

WHEREIS.BAT [see LISTING 4] searches the entire default drive for specific file names. The heart of the batch file is a FIND command that searches the output of

a CHKDSK /V command for a specified string. Since CHKDSK output is uppercase, you must enter your search criteria in uppercase. Typing WHEREIS

.BAK lists files that have the extension '.BAK'. WHEREIS BAK, by contrast, lists any file or directory name containing the (continues)

DEVELOPER'S TOOLBOX

A Dream C System for a Song

The best things in life are free: love, sunshine, butterflies—and now *Multi-Edit* from American Cybernetics. In a generous offer that sounds too good to be true, the company is giving away demo copies of its superb text editor, suitable for programming, writing batch files, and plain-ASCII word processing.

I recently discovered *Multi-Edit* among a pile of disks that Andrew Binstock, editor of *The C Gazette*, handed me at Software Development '89 in San Francisco. To get your copy, call up American Cybernetics (tell 'em Tom sent you) and ask for your free disk, which comes with the full working version of *Multi-Edit*, minus only the macro language manual and technical support.

The company is not selling *Multi-Edit* on a pay-as-you-use-it shareware basis—you are welcome to use the product for as long as you like, gratis. Apparently, the company's betting that you'll like *Multi-Edit* so much, you'll cough up the full \$99 for the complete commercial program, manual, and one free update. If you're shopping for a text editor, at least try *Multi-Edit*. Why

pass up a free lunch?

In that same pile of disks, I came across the *Personal C Compiler (PCC)*, previously known as *DeSmet C*. PCC runs fast, generates remarkably tight code, and compiled all the test programs I fed it. It is a solid C compiler with a well-deserved reputation. You can order the PCC shareware disk directly from C Ware for \$8 or download it from the company's BBS, and you can register your copy for \$30, which buys you an additional listing utility, an object-code librarian, and a memory manager that's useful for creating large arrays. Documentation plus an 8086/88 assembler are included on disk. Special pricing for students is available. Contact C Ware for details.

One minor drawback with PCC is the lack of a MAKE utility for automating multiple-file compilations. Instead, a clever utility named *LATER* compares file dates, letting you simulate a MAKE operation using DOS batch files. While *LATER* is adequate for small projects, a real MAKE utility is a must for larger programs. In the past, I used the MAKE

utilities supplied with Borland and Microsoft language products, but I've now switched to the more capable *Opus MAKE*. It is closer to a UNIX MAKE and comes with a dependency generator that has to be seen to be believed. Without a doubt, *Opus MAKE* is the hottest MAKE on the market, despite a \$79 price tag. But *Opus MAKE* started out as a shareware program called *NDMAKE*, which you should still be able to obtain from bulletin boards and shareware distributors.

Together, *Multi-Edit*, PCC, and *NDMAKE* are a programmer's dream—a full development system for an \$8 song! Of course, serious developers should pay for the commercial *Multi-Edit* package, register their copies of PCC, and order the newest version of *Opus MAKE*. But if I were a student on a shoestring, I'd send in my \$8 for PCC and write code like mad.

I welcome your comments. My MCI Mail and BIX handle is TSWAN; my CompuServe ID is 73627,3241. —Tom Swan

string 'BAK', such as BAKER-.DOC. The program doesn't recognize the * and ? wild cards.

GREP.BAT [see LISTING 5] works like the more powerful UNIX utility of the same name and examines files for occurrences of any character string. GREP.BAT can search files in only one directory at a time, and searches are case sensitive, meaning that *bird*, *Bird*, and *BIRD* are treated as different words. Unlike WHEREIS.BAT, GREP.BAT accepts file names in uppercase or lowercase, and you may use wild cards. For example, typing GREP California *.INC lists occurrences of the string 'California' in all files ending with .INC.

The two batch programs assume that the DOS CHKDSK-.COM, FIND.EXE, and MORE-

.COM utilities are in a directory listed in the PATH command.

GIVE US HALF AN HOUR AND \$399 AND WE'LL GUARANTEE YOU A FULL FEATURED NETWORK.

THAT'S ALL it takes to turn two IBM or compatible PC's into a true network. Half an hour or less to install MainLan and \$399 for MainLan's complete starter pack.

And if you want to add 1, 2 or more, it's just a matter of \$199 for each additional computer.

An inexpensive way to turn your fragmented, unsociable collection of computers into a fully functioning network, sharing printers, making files, data and hard disks available to anyone who needs them, giving you electronic mail and the comfort of security.

The MainLan Starter Pack—everything you need to connect two computers, including two network boards, software, documentation, and one 16.5' shielded cable with terminating plugs. The Extension Pack contains the network board, and one cable and plug set.

FRIENDLY LAN

MainLan's menu system lets you spend your time working instead of learning how to make it work. To transfer or manipulate files, redirect printer output, or send E-mail, just press the appropriate key. You can be a full-fledged member of the network while using as little as 50k. All this at a transmission rate of 4 Mbps.

LAUDABLE LAN

Don't just take our word on it. "PC WORLD" in England says "MainLan is a revolutionary way of operating in a multiple machine environment without having to make all of the usual sacrifices. It has the potential to be the low-cost networking standard of the future." The kind of features that earned

MainLan the PC MAGAZINE EDITOR's AWARD at the 1988 British Personal Computer Awards. That's MainLan.

COMPATIBLE LAN

Because MainLan is NETBIOS compatible, you can run most of the popular multiuser NETBIOS compatible applications programs without modifications. Supports file and record locking.

THRIFTY LAN

MainLan is easy on your pocket-book, too. Our unique hardware design costs less to produce—and you enjoy the savings. You'll also enjoy not having to have an expensive network server.

THE FEATURES

- ▶ NETBIOS compatible
- ▶ 4 Megabits per second transmission rate
- ▶ Needs as little as 50k RAM
- ▶ Printer Sharing
- ▶ Hard Disk Sharing (Virtual Drive)
- ▶ 90 days free support

THE GUARANTEE

It's simple. Try MainLan at our special introductory offer of \$399 for the 2-PC Starter Pack and if it's not what you want in a LAN, return it within 30 days and we'll return your money. The MainLan Extension Pack for one PC is \$199. Limit of one Starter Pack per customer site, please.

NETWORK Q & A

Tips and strategies for departmental networking

Backing up your server's data is vital. Choose the right backup system and stick to a schedule, and you'll never fear a network crash again.

David Ferris

Q. We're having some backup problems on our network. We use IBM's PC LAN version 1.24, with 11 IBM PS/2 Model 30 workstations linked to a PS/2 Model 80 server with 2MB of RAM. For backup, we use an IBM 6157 Streaming Tape Drive with Sytron's Sytos 2.0 software. Because PC LAN requires 350K of server RAM, we can't run Sytos without shutting down the LAN. As a result, we back up twice a week instead of daily. Can you suggest any software that will let us back up and restore files

without shutting down? What other backup strategies should we consider?

Robert Steckbeck
Elizabethtown, Pennsylvania

A. Both the backup software and the LAN operating system (LAN OS) need plenty of RAM for buffering, but there's only so much to go around. The solution? Move Sytos and the 6157 backup unit to a workstation, and use PC LAN's Net Use command to back up the server files over the network. Because Sytos, like most backup software, can't access expanded or extended memory, equip the backup PC with 640K of RAM and strip it of RAM-resident programs. Use your LAN OS to assign the PC as a *redirector* workstation, so there's a minimum of RAM networking overhead.

This approach is usually better anyway. With more RAM available, both the server and the backup system run faster.

Backup to the Rescue

A regular backup regimen ensures that you'll have recent, uncorrupted data on hand in case the server's files are accidentally deleted or corrupted by a network crash. Floppy backup may do for a stand-alone PC, but tape or optical disk backup is essential for a server. Note: With the exception of the EMQ program sold with Emerald's Vast Device tape drive, network backup systems back up only the server—not the workstations.

Streaming tape, the most common backup media, is sold in 60MB, 150MB, and 300MB cartridges. If you have a higher-capacity server, you may want to consider helical scan tape drives, WORM (write once, read many) optical drives, and erasable optical drives.

Whatever hardware you choose, you aren't necessarily

² Price includes basic server backup software but not \$1495 peer-to-peer EMQ option.

³ Backup software not sold with system but supported by \$245 NetBack from Cheyenne Software (Roslyn, NY); software price not included.

Plan ahead. If you expect your server storage needs to grow, consider a backup system that can handle it—but make sure your initial outlay will pay off with a lower cost per megabyte.

shackled to the vendor's software. Many third-party programs, such as *Sytos*, work with many different drives.

Backup Software Essentials

The first thing to look for in backup software is compatibility with your LAN OS. Beyond storing data, the software should be able to save LAN OS system files (such as *NetWare's* bindery data) that define users and assign privileges.

A good package makes it easy to select files and directories to be backed up or restored. Look for a program that lets you automate tasks with batch files and macros. If you plan to back up or restore data while the LAN is running, make sure the program skips open files and automatically returns to them later to try again. Other desirable features include error correction, disk utilities, data compression and encryption, and reporting and search functions that help you track megabytes of archived data.

Tape backup speeds range from 1MB to 5MB per minute, and you can boost speed further by providing plenty of RAM for buffering. Yet even at top speed, backing up a large hard disk can take hours. Most packages can run unattended; you simply set the unit to back up at a certain time. To avoid changing tapes, buy a unit that can hold every file you want to back up. If you expect the LAN to grow, you may want to choose a backup

system that can daisy-chain two tape drives, automatically switching to the second when it fills the first. However, it's better to buy a larger device that can accommodate your future needs—daisy-chaining often performs unreliably.

The Hardware Equation

When evaluating backup hardware, consider the following: Does it work with top-notch backup programs? Does its total capacity match your LAN's? Is the media affordable, dependable, and widely available?

Unless you need more than 300MB of storage, stick with streaming tape devices from Archive, Irwin, Maynard, and other vendors. The cost per megabyte is high, but the overall cost is reasonable, and the media is cheap and standardized. And tape capacity is rising—soon you'll be able to buy 3M cartridges that let you store 250MB on a standard 150MB drive.

Mountain's tape offerings are typical—a 60MB external unit costs \$1895, a 150MB unit, \$2395, and a 300MB unit, \$4195. For hefty backup, ADIC's LANbacker 8000 (\$7995) acts like a tape backup jukebox, switching among ten 86MB cartridges for a total of 860MB.

Helical scan drives are usually the best high-capacity choice. Brainwave, Racet, and Emerald all sell high-capacity units that pack data onto 8mm videotape. Emerald's Vast Device backs up 2.2GB at up to 15MB per minute. Priced at \$7995, Vast costs only \$4 per megabyte.

WORM drives are another high-capacity alternative. For example, the \$2988 Panasonic

Backup Strategies

You Can Use

Don't let the demands of data backup put you off. Set a schedule and stick to it, and your investment will pay off.

Use the file-by-file option instead of image backup. The latter saves an exact copy of the hard disk—warts and all—but it's slow and often stumbles when used on a LAN.

Back up all targeted files at the end of the week. At the end of every other business day, do an incremental backup of files that have been altered since the weekly backup. You may even want to run an incremental backup twice a day. Clearly mark and date your tapes or disks, and store them in a safe place. After two weeks, start recycling the oldest media in chronological order.

To minimize disk clutter, move seldom-used files onto media that can be archived for several months. It's a good idea to archive files every week by keeping the full weekly backup instead of recycling it.

Proper hardware maintenance will minimize headaches. To keep your tape unit humming, clean its read/write heads with a cotton swab soaked in isopropyl alcohol after every 8 hours of use. Most tape cartridges wear out after 50 full backups, so keep track of how many times they've gone through the wringer. —D. F.

LF-5000 holds 384MB on each \$115 cartridge—a \$7-per-megabyte value. Just remember that you can't erase and reuse the disk. Thus, WORMs are fine for archiving but unfit for daily backup (see *The Hardware Shelf*, PCW, June 1989). The new erasable optical drives, such as (continues)

386 SYSTEMS

MAXIMIZE PRODUCTIVITY

Here's how...

It's the future of personal computing. For power and speed, 386 PCs outclass all other machines.

For large spreadsheets and databases, the 386's dramatically faster performance is ideal. And for emerging applications like networking, desktop publishing, CAD, statistical analysis, expert systems and real-time animation, the 386 is essential!

You can expect to see an increasing number of programs that run efficiently only on a 386 system. To maximize the multitasking capabilities of OS/2, its tremendous processing power is a must.

But should you buy now — or wait for still further improvements? Which system is best — and what specific configuration suits your needs?

The choices are many — and potentially confusing. There are 16MHz, 20MHz and now 25MHz 386 machines. Huge differences in performance. Exaggerated promises by vendors. Among the variables you must consider: OS/2 capabilities, disk and memory caching, clock speeds, display adapters, real and protected modes, compatibility, expandability...and more.

New report has the answers.

Now there's a solution. *PC Digest's* authoritative, comprehensive report on 386 systems. It's just off the press. With concrete recommendations based on objective laboratory tests. Including OS/2 multitasking tests for the 386.

Our technicians evaluated each machine for ease of installation and handling, applications-based performance, features, documentation, and software incompatibilities.

In *PC Digest's* new 386 report, you'll find an in-depth tutorial covering 386 technology (including memory caching, memory architecture and numeric co-processors)...Detailed writeups on each machine...Performance test results...Complete specifications (including configurations, options, prices, support and warranties)...And a Master Summary Chart that shows at a glance our ratings and recommendations for each PC tested.

From PC World's official research facility.

Nothing else can match the systematic comparative ratings of *PC Digest*. That's why, last year *PC World* chose NSTL as its official testing facility.

Like *Software Digest*, its well-known companion publication, *PC Digest* is fiercely independent and impartial. We accept no ads. We pull no punches.

Our performance tests are applications-based. We test machines with popular software like the major spreadsheet and database programs. In contrast, many magazine reviews use misleading "raw processing" benchmarks that bear little relation to real-world business tasks.

Not surprisingly, *PC Digest* has become the single most trusted resource for objective evaluations of PC hardware.

Special offer to qualified computer professionals.

PC Digest's 386 report normally sells for \$40. But as part of a campaign to identify DP/MIS professionals and PC coordinators, we are offering it for just \$20.

There are some reasonable conditions to this offer. To demonstrate that you qualify, you must include your business card or letterhead with the coupon below. If you phone in your order, the operator will ask for your company, title and department. At this low price, we cannot bill. Check or credit card are accepted. If you're dissatisfied for any reason, we'll refund your payment.

Expanding software applications and capabilities will push PC hardware to its maximum potential. 386 technology will revolutionize business computing. Are you prepared?

The base cost of a 386 system can range from \$2,599 to \$11,295. For just \$20, this remarkable new report can help you decide whether to buy, when to buy, and how to choose the right system.

Racet's Cosmos 600 (La Brea, California), may soon be the best alternative. They offer fast access speeds, but few backup programs currently support them.

Features that say value...

Economical: \$1,000 less than other large format plotters.

Compatible: Operates with all popular CAD software supporting DM/PL™.

Multiple Media Sizes as small as 8½" x 11" or as large as 36" x 48" eliminates the need for a second plotter.

Practical speed you can really use: 10" per second assures good drawing throughput while optimizing the speed at which most plotter pens can draw without skipping.

Repeatability and Resolution: .004 assures quality suitable for the most demanding applications including PCB artwork.

Vacuum Paper Hold Down guarantees perfect registration.

Prepare to meet your NEMESIS™

Go has been a way of life in the Orient for over 4,000 years. As much a philosophy as it is a game, Go is considered by many to be the secret of Japanese success.

"While chess is a game of war, Go is a game of market share." (Pres. Nikko Hotels)

From the Father of Computer Go, NEMESIS Go Master® is the only program rated in human tournaments. "I've had a blast playing (and learning to play) this incredible game. The beauty of it is that NEMESIS helps!" G. Entsminger, MicroCompuco #46

The only Go program to successfully imitate human play.

Security

HANDS OFF THE PROGRAM® PC SECURITY

HANDS OFF THE PROGRAM is an all software, privilege based, system security utility that prevents unauthorized access of your PC's subdirectories, files and disk drives.

HANDS OFF THE PROGRAM provides a sophisticated technique to separate up to 64 users of a PC, by privilege, into their own separate areas on the hard disk. Users may access only their own areas and any other area protected with a lower privilege.

HANDS OFF THE PROGRAM protects files on your hard disk by preventing unauthorized users from modifying the DOS file attributes (Read Only, Hidden, System). For example, use the READ ONLY attribute to prevent virus programs from invading your system.

HANDS OFF THE PROGRAM restricts access to your hard disk via "disk locking". A "locked" hard disk may not be booted, accessed by applications software or formatted via the DOS FORMAT command until it is "unlocked".

HANDS OFF THE PROGRAM incorporates advanced security techniques on PC's running PC-DOS 3.30 or higher. The DOS FORMAT of Drive C is prevented while the PC is in use, the security manager is protected against Control Break and a boot from floppy results in the automatic locking of Drive C.

HANDS OFF THE PROGRAM also provides:

- Disk Encryption
- User Access Reporting
- Stops Common Viruses
- Mailbox
- Read Only and Execute Only privileges by user
- Auto Installation

A Perfect Defense Doesn't Have To Cost Billions

From the man who wrote the book on data recovery comes the premier software defense against data loss. Mace Gold offers 17 programs to help safeguard your data and keep your hard disk running reliably and efficiently.

On guard with Mace Gold you have, foremost, *Mace Backup*, a fast, convenient, fail-safe way to save and restore hard disk data. *Remedy* stands in reserve, ready to find and automatically fix the inevitable weak spots on your disk before they can threaten valuable files. *POP*, our power-out protection software, can carry you past brown-outs, black-outs and keyboard lock-ups. And *Vaccine* stands as a final line of defense against "bombs," "viruses," and the odd "trojan horse."

No defense is perfect if it can't recover, and Mace Gold provides what you would expect, the best data recovery there is. *UnDelete* and *UnFormat* offer flawless recovery of deleted files and entire disks. *TextFix* and *dbFix* go beyond simple ASCII retrieval to automatically find and rebuild lost, corrupted or damaged word processing and dBase files without losing precious format information. And now

there's *MUSE*, a sector editor intelligent enough to teach you, and packed with enough recovery power to resurrect the "deadest" of disks.

Of course, the best defense is still a strong offense, and Mace Gold gives you just what you need to keep your system moving fast and efficiently. With fast disk caching in regular, extended or EMS memory, quick and reliable file consolidation with *UnFrag*, and directory sorting and squeezing, Mace Gold can minimize wear and tear on your disk—and your fighting spirit.

Mace Gold offers an exceptional balance of features, performance, ease of use, and price when evaluated against the competition under everyday working conditions.

Add the benefit of having a company that specializes in recovering the unrecoverable working for you, and you'll never find yourself having to think the unthinkable about the safety of your precious files.

JOIN the PC FAX REVOLUTION with the JT FAX from QUADRAM!

"BEST BUY" PC World, P.C. Magazine's "Editor's Choice." INFO-WORLD'S Reader's Choice Product of the Year.

JT FAX sends documents to other fax machines & fax cards right from your computer. If most of your fax documents originate on your computer, why suffer the inconvenience and lost productivity of printing out your document, walking to the fax machine, and waiting in line? Instead, send a fax right from your word processor, spreadsheet, or other software!

JT FAX also gives you plenty of options when you receive a fax. You can display it on your PC's screen, print it out on your graphics printer, store it as a graphics file, or even retransmit it as a fax. All at your convenience!

JT FAX features nearly effortless software operation. Friendly pop-up menus walk you through dialing, sending, and receiving. There are no complex file conversions or commands to remember. JT FAX gives you extra support with on-line help at every level.

All JT FAX products feature: *On-the-fly* convert and send, phone directory, scheduling (send fax unattended), broadcast (send fax to predetermined groups), transaction log, compressed print (reduces spreadsheets to fit on standard-size paper).

SURGE & POWER PROTECTION

Surge Protectors And Noise Filters

When it comes to protecting your computer from the inevitable power surge, please don't take chances by cutting corners. We offer the PANAMAX line of power protection. PANAMAX guarantees the equipment plugged in their units against surge damage and backs that promise with a \$2,000,000 insurance policy! This coverage remains in effect for as long as you own the PANAMAX! If damage occurs to the surge protector or on the rare occasion that a surge or spike gets

through to the equipment plugged in, PANAMAX will pay for the repair of your computer! These high quality units are made in California, and their toll-free number is imprinted onto every unit if you ever have any questions or a warranty claim. They manufacture surge protectors under private label for AT&T, XEROX, 3M, and many others. You can be confident you are buying state-of-the-art surge protection insurance for your computer, modem or fax at an attractive price.

- PANAMAX MAX 6**, 6 receptacle, 6 ft. line cord, on/off switch, noise protection and circuit breaker
- PANAMAX TELEX 4**, 4 receptacle and two phone jack connections (line in & line out) for the ultimate in modem or fax protection, 6 ft. line cord, on/off switch, noise protection, and circuit breaker

Battery Standby System

The primary purpose of an uninterruptible power supply (UPS) is to allow you to safely conclude your computer task when the power fails. An UPS achieves this protection by continually monitoring the incoming power line, and "switching over" to the charged battery when the power source fails to sustain the proper voltage range. Likewise, the UPS also offers excellent spike, surge, brownout, and noise protection. The UPS is plugged directly into the wall outlet, and your computer and monitor connect to the "UPS" outlets on the back of the unit. In addition to the two battery-standby outlets, the better UPS systems also offer spike and surge protection (but no battery back-up) on auxiliary plugs.

The TSI UPS 3150 is a slimline (17" x 11" x 3", 35 lbs.), cost-effective and superior engineered approach to power protection. Features 300 watts maximum output from 2 UPS sockets with a 2.5ms switchover time to the battery, and 2 surge protected and line filtered AC auxiliary sockets. Your battery back-up time is 8 minutes at full load, and 25 minutes at half load. More than ample time to finish your processing, exit your application and safely shutdown your system. Additional battery modules are available to increase battery back-up time to several hours. The TSI features indicator lamps and audible alarms to inform of operational status. Shipped completely assembled.

DISKETTES

Sony Diskettes

Sony is the clear choice if you want only the best from your diskettes. Critically certified to be 100% error free, Sony diskettes deliver exceptional accuracy and readability.

Polaroid Floppy Diskettes

Ever notice how the bizarre has a way of happening at the most inopportune times? That's why Polaroid developed "DataRescue" Diskettes. Now you have a media so fool-proof that data can be recovered from all kinds of accidents, spills and general misuse. So when it comes down to one of those "simple human errors", and hours of work seem lost forever, remember that Data Rescue Diskettes may cost a little more but their value is priceless.

Polaroid Professional Polaroid Quality Diskettes

Nashua Diskettes

"MADE IN U.S.A."

"Quality" is a word that's rather easily tossed around today. Every manufacturer of diskettes is quick to promise you the highest quality available. But at NASHUA, a U.S. based company located in Nashua, N.H., quality has a much tougher definition; it also means consistency. Time after time, disk after disk, you can depend on Nashua for all your media needs. Lifetime warranty on all diskettes.

TAPE BACKUP from Tallgrass Technologies

"When it's worth saving, it's worth Tallgrass"

Why back up on tape you ask? Have you ever put off your diskette-based backup because you did not have the time to insert 112 diskettes for a 40 meg drive? Have you ever typed "Y" when you meant "N" and then it was too late? Have you ever overwritten a file by mistake? How much would it cost to reconstruct your valuable data? CAN your data be reconstructed? If there was a fire, theft or other catastrophe, what would your dollar, time, and reputation loss be if you lost all your billing and customer information, or three months worth of CAD drawings? Having your data readily accessible may mean the difference between business as usual and bankruptcy. Like other complex electro-mechanical devices, hard drives failure is not a question of "IF" but "WHEN" — The question is when "WHEN" becomes NOW, will you be prepared?

Tallgrass tape backups are considered the most advanced in the industry. Yet, they are one of the easiest to install. For example, the TG-1140 unit featured below uses your existing floppy controller and cable, so it is identical to installing a floppy drive. (In the unlikely event you have difficulty, Tallgrass offers free technical support).

If you already have two floppy drives installed (and no more room on your existing floppy controller/cable), an adapter board is available which allows the use of the tape unit without giving up one of your two floppy drives. In addition, the TG-1140 can be installed in an optional EXTERNAL cabinet which permits moving the unit from computer to computer to do hard drive backups. When your needs change, even to the PS/2, you can convert to either internal or external requirements without losing your initial investment in the TG-1140. The TG-1140 is not a compromise. Simply superior technology which guarantees absolute dependability and data restoration over the long haul.

TALLGRASS tape systems are expeditious, reliable, and include truly easy-to-use software. Context sensitive help screens lead the way, step by step, through all backup operations. Tallgrass units offer genuinely automatic, unattended backup. Backup options include: Image, File-by-File, AlarmClock, and Changed Files Only. All Tallgrass units come with free technical support, free software upgrades and a 3 year warranty — quality and support second to none!

Hand & Page Scanners

The OCR software that is available with the Princeton Graphic Scanner is the second best selling OCR package. It allows you to automatically enter printed or typewritten text into your computer — eliminates the drudgery of retyping. You scan the typewritten pages and the OCR converts the scanned images into editable text that can be further processed with any word processor. This package is used by IBM,

NASA, General Electric and the U.S. Government Printing Office. In combination with the scanner, you can teach it to "read" any new characters or symbols, even entire new fonts, in a few minutes. It comes "pre-trained" for the 15 most popular fonts used in the USA, including Courier, Elite, Letter Gothic, Pica, Times Roman and Helvetica.

CONVENIENT ORDERING

Telephone Orders:

Making a purchase is as easy as dialing the telephone! Just call our ORDER HOTLINE at 1-800-352-8844 (IN GA 1-404-662-8001) between 8:30 a.m. and 5:30 p.m. Eastern Standard Time, Monday through Friday. When you call MicroSell's ORDER HOTLINE your call will be directed to one of our specially trained sales consultants ready to assist you with your selection. Please have your credit card and order information ready. For credit card orders it is necessary to give our sales consultant the address that your credit card is "BILLED TO", and your preferred "SHIP TO" address if it differs from your billing address. There is no surcharge for your use of credit cards on MicroSell orders.

Mail In Orders:

Or if you prefer, use our handy ORDER FORM on last page of this section and your order will be processed the same day we receive it in the mail. Please print all the information and fill in the order form completely for faster processing, including product number, a brief description, price, and shipping charges noted in parenthesis throughout the catalog. Also be sure to include a daytime telephone number in case our sales consultants have a question about your order. This will greatly aid in handling and processing your order. If there is no daytime telephone number included on your order and we have a question or problem with your order, you will be notified of the problem in writing, which will cause your order to be delayed.

When placing your order by telephone, please give the sales consultant the code from the upper right hand corner of your address label to receive a FREE GIFT! If mailing in your order, please place the code on the appropriate space provided on the order form to receive your FREE GIFT!

Purchase Orders:

MicroSell accepts purchase orders from state supported schools and universities, hospitals, banks, government agencies, and well-rated FORTUNE 1000 companies. These orders will be shipped upon receipt of a hard-copy of your purchase order, which may be mailed to us: (6410 Dawson Blvd., Suite 110, Norcross, GA 30093) or sent by FAX: (FAX No. 404-246-9720). For all new accounts, please send credit information including 3 credit references, bank account number, bank telephone number and contact person, your company's accounts payable representative's name and telephone number, and your D & B number. Terms are NET 30 and payment must be received at MicroSell within 30 days to retain credit privileges. CONFIRMING P.O.'s must be clearly marked CONFIRMING. MicroSell reserves the right to refuse P.O.'s on close-out or heavily discounted items, or poorly-rated companies.

Catalog Showroom

When visiting Atlanta, GA, stop in and visit our CATALOG SHOWROOM CENTER which features the same everyday low prices as our Mailorder Catalog. We are located at 6410 Dawson Blvd., Suite 110, Norcross, GA 30093. The Showroom hours are from 9:00 A.M. - 5:00 P.M., Monday through Friday. Hours vary during holiday seasons. Please give us a call during those times.

Types of Payments:

MicroSell accepts the following payment methods: VISA, MASTER-CARD, AMERICAN EXPRESS, and CHECKS (Personal and Company). Checks must be preprinted with the account holder's name, and account number, (address is also helpful, but not required). Orders can be shipped C.O.D. (up to a certain limit), an additional \$3.00 plus regular shipping charges is required for all C.O.D. orders, with payment by cash, postal money order or certified check. Pre-approved accounts only can be shipped C.O.D. company check.

Shipping

Shipping and handling charges are clearly noted in parenthesis after product information and pricing throughout the catalog. Shipping is sent U.P.S. Ground unless otherwise specified. The minimum shipping charge is \$4.00. Shipping charges will be reduced on most multiple item orders from the prices designated in parenthesis. Call for pricing. Additional shipping charges are required for U.P.S. RED LABEL (Next Day Delivery), U.P.S. BLUE LABEL (Second Day Delivery), and orders to certain areas of Canada, Alaska, Hawaii, Puerto Rico, and Europe. Shipments to A.P.O.'s and F.P.O.'s will be sent by U.S. Mail (Insured) and require additional postage based upon weight of package and insurance amount. Call for exact charges for packages other than U.P.S. Ground shipments and all areas outside the Continental United States.

DIVERSE SELECTION

WELCOME TO MICROSELL! Our goal is to provide you, the consumer, with the best value available on computer products and accessories. This encompasses not only offering fair, competitive prices, but backing those prices with outstanding sales and technical support. Our catalog offers a diverse selection of computer equipment and supplies from nationally recognized manufacturers. From name brand laptops and peripherals to software, MicroSell consistently offers low, discount prices. Call us and see why thousands of satisfied customers call MicroSell again and again for all their computer needs.

WARRANTY REPAIR & RETURNS

We want you to be happy with your purchase. A clear understanding of our policies and procedures will help to insure your satisfaction and repeat business. All merchandise is shipped as received from the manufacturer in the original packaging. MicroSell's technical support department retests certain products such as laptops and monitors prior to shipment to reduce DOA (Dead On Arrival) shipments. Check the specific manufacturer's product warranty when ordering, as warranty periods vary by product line and manufacturer. While service and repair is handled by the manufacturer, MicroSell's Technical Support staff will insure that the warranty provisions of our manufacturers are met in a timely and professional manner.

NO PRODUCT CAN BE RETURNED WITHOUT PRIOR APPROVAL FROM TECHNICAL SUPPORT AND THE ISSUANCE OF AN R.A. (RETURN AUTHORIZATION) NUMBER.

ANY RETURNED ITEM IS SUBJECT TO PRIOR APPROVAL AND TIME LIMITATIONS.

DOA's (Dead On Arrivals) must be called in within five (5) days from the receipt date, must receive an R.A. (Return Authorization) number, and returned immediately. Upon receipt of the return, MicroSell will test the product immediately and exchange or replace it at once if the replacement product is in stock. If out of stock, it will be prioritized for shipment as soon as replacement units are received.

After 5 days from the receipt date, all repairs and replacements must be handled by the manufacturer's warranty provisions.

TECHNICAL SUPPORT can be reached at (404) 662-8001. Do not use the ORDER HOTLINE for technical support questions and obtaining R.A.'s. It is strictly for placing new orders.

To return a Product for Repair:

- 1) Telephone Technical Support and receive an R.A. number.
- 2) Give Technical Support the following information: your name, the product name, date of purchase, invoice number if available, and a brief description of the problem you are having.
- 3) Return the product with all cables, software, parts, manuals, etc. in the original box in the same condition as received by you.
- 4) Enclose a copy of the invoice if available.
- 5) Write the R.A. number on the outside of the shipping box. If an R.A. number is not visible on the outside of the shipping box it will be refused by our receiving department.

Goods returned for repair will be repaired or replaced at MicroSell's discretion. Those items which have been damaged due to improper installation or misuse will be repaired upon request at our current technical repair rate, plus parts and shipping.

REFUNDS:

Please familiarize yourself with our policies prior to your purchase. Approved refunds will be in the form of a MicroSell "store credit".

THERE WILL BE NO REFUNDS UNDER THE FOLLOWING CIRCUMSTANCES:

- 1) All software sales are FINAL SALES and are non-returnable and therefore non-refundable. Please check for proper disk media prior to placing your order.
- 2) Items noted in the catalog or described by the sales consultants as "FINAL SALE" items are non-refundable. These "FINAL SALE" items are often close-outs or liquidation items which have been heavily discounted to pass the savings on to you. Therefore these items are non-refundable for any reason. DOA's will be swapped out as described under WARRANTY REPAIR & RETURNS.
- 3) Items which we do not normally stock that are specially ordered upon your request cannot be refunded.
- 4) Incompatibility problems with hardware or software in non-IBM machines are non-refundable — we guarantee that our products are 100% IBM compatible. The majority of "clones" will operate without a hitch, but we cannot guarantee clone compatibility due to the multitude of computer designs.

Customers who are due for an approved refund will receive a "STORE CREDIT" to be applied to your next purchase from MicroSell.

ALL RETURNS ARE SUBJECT TO A 15% RESTOCKING FEE.

WE APPRECIATE YOUR BUSINESS AND LOOK FORWARD TO TAKING YOUR ORDER!

We are in the process of consolidating our mail list. To continue receiving our catalog, please complete and mail the following coupon to us. If you have not ordered within the last six months or do not complete and return this coupon, you will be deleted from our mail list.

LAN Operating Systems

**Which one is right for your organization...
and which could cause you serious problems?**

Today, business after business is upgrading to a network environment, and is faced with many difficult and complex choices. So complex, that they challenge even the experts.

To maximize productivity and avoid costly delays, several departments and individuals need to share the same resources. This includes simultaneous access to critical data and the ability to run multiple functions concurrently.

But the options are still potentially confusing. How many users will the network support? How quickly can transactions be processed? How easily can it be installed? Is the documentation decipherable? What topologies and network adapters are supported?

**Now there's a way to
know - quickly & easily**

The answers are in one place: *Software Digest's* authoritative report on LAN Operating Systems. It's just off the press. With concrete recommendations based on objective laboratory tests of eight operating systems, including: Vines/386, DataLAN, SFT Netware, 3 + Share, Tapestry II, IBM LAN Server, 10NetPlus, and 3 + Open.

Our technical staff evaluated each program for ease of learning, ease of use, performance, versatility, and error handling. We put each system through a series of grueling real-life exercises measuring important elements such as installation, documentation, and security administration.

In *Software Digest's* new LAN Operating Systems report, you'll also find an in-depth tutorial covering all aspects of network technology (including system configuration, connectivity, and performance monitoring)...comprehensive two-page analysis on each system, giving you detailed ratings, strengths and limitations, specifications, and prices...22 performance results...210 verified versatility items...and the Master Ratings Chart comparing all the programs at a glance, and rating each system from best to worst.

**The single most
trusted software
evaluation service**

Nothing else can match the systematic method of comparative ratings pioneered by *Software Digest*. Published by National Software Testing Laboratories, it's been hailed as "The Consumer Reports" of software. Instead of the usual product "reviews", we perform rigorous, scientifically controlled benchmark tests — using realistic business tasks.

We're fiercely independent and impartial. We pull no punches. We refuse any offer that could compromise our editorial integrity.

Not surprisingly, *Software Digest* is the single most trusted resource for evaluations of IBM-compatible PC business software.

**Special offer to qualified
computer professionals**

Software Digest's report covering eight LAN Operating Systems normally sells for \$50. But as part of a campaign to identify DP/MIS professionals and PC coordinators, we are offering it for just \$25.

There are some reasonable conditions to this offer. To demonstrate that you qualify, you must include your business card or letterhead with the coupon below. If you phone in your order, the operator will ask for your company, title, and department. At this low price, we cannot bill. Check or credit card are accepted. If you're dissatisfied for any reason, we'll refund your payment.

LAN technology will maximize productivity throughout your business. Can you afford to ignore it? Here is the best, fastest, and easiest way to get on top of this emerging technology, and make the right decisions with confidence.

Q.

"Where Do I Turn For More Information?"

A.

1. Turn to the Reader Service Card at the back of this issue of *PC World*.
2. Find the Reader Service number of the product you want in the product or advertiser indexes.
3. Circle the number, fill out the postage-paid card and send it in. It's that simple.

In return, our advertisers will send you more information on the products you want. It's just another way that *PC World* helps you make the best buying decisions for your company.

FASTDATA Personal Computers

If you're concerned that our price is too little to pay for a complete new computer system, we'll give you 30 days to change your mind.

When you first get your hands on a FastData computer, you may wonder what's the catch? After all, you get a fast 286 or 386 system with a monochrome monitor and a 40mb hard disk that's ready to run right out of the box. You get guaranteed compatibility. You get top-notch components from Western Digital, Seagate, Toshiba, and other industry leaders. You get a one-year warranty (ask about our on-site option) and free technical support. You can choose peripherals from FastMicro's large inventory. And if you are not thoroughly satisfied within 30 days of having on your desk, we'll refund the purchase price (excludes shipping).

What's the catch? We don't include MS-DOS, that's \$79 extra.

The T1000 is the perfect second PC! It comes with 512K of Ram, a 720K floppy drive, a supertwist LCD screen and MS-DOS in ROM! All this in a battery-powered 7 pound package. A 768K Ram card is just \$269 and can be set as base, expanded, or a non-volatile Ram disk.

WordPerfect 5.0 \$215

The most popular word processor is now even better than ever! Version 5.0 adds multiple font support, graphics integration, page preview and much more.

WordPerfect 5.0 still retains its feel and ease of use that made it #1. Combine this with the best support in the industry and you can't lose.

FoxBASE+ \$185

FoxBase+ 2.10 is simply the fastest dBASE compatible database software available. FoxBase+ also adds many enhancements to the dBASE language. And it's user-friendly too, its FoxCentral uses pull-down and pop-up menus and you can perform every important database operation without programming! There are even LAN, runtime, and 386 versions available.

RGB Color Monitor by Samsung \$199

These 14" monitors were purchased from a large PC manufacturer who was overstocked. They are brand new with one year warranties and are made by Samsung. They are fully CGA compatible and work with PC compatibles. A CGA (640x200 resolution) card is just \$49 and comes with a printer port. This is the perfect video combo for your new XT or AT clone.

A Customer Custody Battle

Steve
Goble

The recent divorce of Businessland and Compaq reminds me of how fragile relationships can be in the computer industry. In more mature industries, spats like this are everyday occurrences, but the parties usually reconcile without much fanfare.

Just like nosy neighbors, PC industry pundits close to the couple are gossiping about who was at fault, whether they'll get back together again, and who will get custody of the customers. But the real question is, How will the split between Compaq and Businessland affect the customers?

It isn't a serious worry for some customers—multiple-unit buyers, who started making their own PC buying decisions long ago. For the most part, progressive corporate buyers have long since chosen their PC equipment standards. During their early years, they may have taken a few chances on clones whose names they can no longer remember. But the challenge of connectivity (local area networks and micro-to-mainframe linkages) has matured them.

The large corporation typically shops resellers for price and availability rather than advice or other services. It isn't unusual for high-volume purchasers to receive 30 to 35 per-

cent discounts off list. Since availability is usually tight for the new technology such customers demand, their requirements probably are being met by more than one supplier. This, in turn, forces them to create their own internal support staffs, or contract with third parties, to achieve consistent levels of service.

At the worst, large corporations may be temporarily inconvenienced by having to move a little further down the phone book to the next retailer.

Smaller corporate customers, on the other hand, are more dependent on reseller advice and service, and more susceptible to being hurt.

They also face a tough choice: "Do I change my standard to match what the retailer has to offer, or do I change retailers?" While it may be painful and frustrating, most customers will probably opt for the latter. But other users who don't have standards in place will likely choose the security of a retailer they know.

What about first-time computer buyers? Like newborns, they are probably unaware of the divorce. Even if they do understand the issues, they are more concerned with other matters, like price. Chances are that these buyers would never have

paid the incremental price of a Compaq over a clone—regardless of the retailer.

The bottom line, then, is that most users will get through the divorce with only minor inconvenience. Individuals who are properly supported by their corporation won't notice much change. And customers who relied on Businessland are already accustomed to building new relationships, given the high turnover among retailer support personnel.

We may see other divorces, but probably none as sudden or as splashy as this one. There just aren't that many large players, and most would shy away from the negative press. In any event, the end user should survive these minor squabbles just fine. Compaq may lose a few customers, but most of them will find other sources. Businessland seems to be the big loser. ●

KENSINGTON EXPERT MOUSE. THE REVOLUTION STARTS HERE.

Presenting Expert Mouse for the PS/2®, a revolutionary new input device. Remember how the mouse fundamentally changed the way we used computers? Now, Kensington revolutionizes the mouse with the introduction of Expert Mouse.™

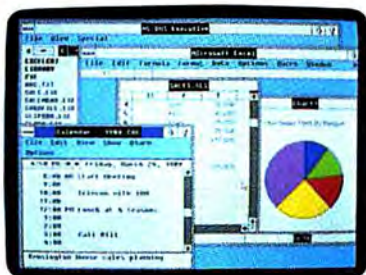

Since it's a trackball, it gives you greater control of your desk and your mouse because you move only the ball, not the entire mouse. Its size and shape allow your hand and wrist to rest comfortably while your fingers roll the trackball.

GET TO THE POINT. PRECISELY. QUICKLY.

Expert Mouse is precise and fast. Its patented optical technology positions the cursor exactly where you want it, and a unique feature called "click-lock" makes drawing, scrolling, and highlighting a breeze.

WORKS WELL WITH ALL YOUR SOFTWARE.

Expert Mouse is the ideal input device to use with any Microsoft Windows® application. In fact, Expert Mouse works with all the software packages that work with an ordinary mouse. And for applications not written with a

mouse in mind, Expert Mouse comes complete with programmable pop-up menus. These menus enable you to use Expert Mouse with already familiar programs, including Lotus 1-2-3® and WordPerfect®.

MAKES YOU AN EXPERT.

Expert Mouse has a special automatic acceleration feature which senses your working speed. Roll the ball slowly for pin-point precision. Roll it quickly and the cursor will speed across the screen.

Expert Mouse — the next step in the revolution toward a better way of computing.

Expert Mouse is available at your favorite dealer. To find the dealer nearest you, call Kensington at 800-535-4242. In NY, call 212-475-5200, or write to us at Kensington, 251 Park Avenue South, New York, NY 10010.
